>cloning a U.S. AR8000? Any other ideas?

If you purchased the AR8000 from a US dealer (send a copy of the
receipt) send me the radio and I'll correct the problem free of
charge. We had in the past received some shipments with the incorrect
bandplan for the US. AOR now randomly checks a number of units at the
factory before shipment so all current production should be OK.

If you do decide to send the radio in just enclose a note or put
'Attn. Steve' on the box. It takes only about a minute to load the
correct bandplan so I can generally turn these around the same day.

B. Regards,

Steve

If he's close to the tower all the better for him. For all you know he could be 50 miles from the mobile side of the conversation. By the way you don't have to be that close to pick up the Image frequency on a dual conversion scanner.

4. FS: PRO-43 (CELL MOD), PRO-39 (CELL MOD), PRO-42

Newsgroup: rec.radio.scanner
Date: 1996-04-01 00:00:00 UTC
From: ke6tgn@ix.netcom.com
Message-ID: <4jo19b$kdr@reader2.ix.netcom.com>
Source record: 237196
Cross-posted to: rec.radio.swap,rec.radio.scanner

I have the following scanners for sale:

PRO-43: I have two available. 200 channel, Hyperscan. Both have had the audio modification to improve the sound quality. Both have been restored so they operate continuesly from 806 - 999.9875mhz. They also cover 30 - 88 mhz, 118 - 174mhz, 220 - 512mhz. Both are in good condition, though one has a few more cosmetic scratches than the other. $250.00 each.

PRO-39: The "missing" frequencies have been restored. 200 channels, Hyperscan. Cosmetic scratches. $200.00

PRO-42: 10 Channel. 30 - 54mhz, 138 - 174mhz, 380 - 512mhz. Battery door is loose and must be taped to stay shut. Cosmetic scratches. $70.00.

I will accept ONLY US Postal Service money orders (UPS tooooooooo slow on sending cash). Prepay or COD only. Buyer pays shipping.

Thanks!

John B. Lawrence
KE6TGN

5. Radius SP10 programming codes

Newsgroup: rec.radio.scanner
Date: 1996-04-01 00:00:00 UTC
From: footage@well.com
Message-ID: <footage-0104961621580001@footage.dialup.access.net>
Source record: 237197

Motorola Radius SP10 HTs are programmable by means of DIP switches located behind the removable battery tray. Trying various settings with a frequency counter, the single-frequency CSQ UHF models I tested proved to be capable of working the following frequencies, some a little surprising.

(In the following list, "U" and "D" refer to the up and down positions of the DIP switches in left-to-right order. The color codes are Motorola's own.)

DIP Freq Color Code

DUDU 462.575 No color
DUUD 462.625 No color
UDDU 462.675 No color
UUDU 464.325 No color
DDUU 464.500 Brown Dot
UUDD 464.550 Yellow Dot
DDUD 464.825 No color
UUUU 467.7625 "J"
DDDD 467.8125 "K"
UUUD 467.850 Silver Star
DDDU 467.875 Gold Star
UDDD 467.900 Red Star
DUUU 467.925 Blue Star
UDUD 469.2625 No color
DUDD 469.500 No color
UDUU 469.550 No color

(Don't confuse the PL tone DIP switches, also behind the battery tray, with the frequency tuning controls.)

OK to repost this message anywhere.

Yeah, but in a big city if you aren't gonna get them no matter what if
you aren't physically within a couple of miles of them. Cell phones are
mobile phones, aren't they. No one is going to just stay in their
home or office and talk on one for the most part, why would they pay for
all that expensive airtime? To listen in, you're going to have to
follow the person around as will as spend $thousands.

7. WTB: Handheld 40 CH C.B. radio

: >do you even need a scanner, you can directly hear what they're saying.

: What are you talking about???? You don't know me, you don't know my
: habbits, I was using that as an example... For the record, if and
: when I do scan that portion of the band, I hear a lot of stuff, I hear
: cell towers 2 cities away from me, people 2 counties away discussing
: their business and personal life...

I was just trying to make the point that the privacy issue isn't as big a deal as some people want to make it out to be. What I'm saying is that if your friend was a couple miles away, you'd have a much, much harder time picking **him** up than when you are in the same room. If you're in a big metro area (i don't know if you are or not), there are at most times hundreds of different conversations going on within this radius. Merely scanning through them all will take the better part of an hour, right? Finding your friend under this situation would take a lot of luck, it would not be easy.

And for every call you do listen to, there are probably 10,000 in the same city you don't pick up. So the odds aren't that great that any particular individual is going to be listened in on.

'Cept there is no Gates Energy Products to make good on that warranty!

The assets of Gates were purchased by Eveready a looooong time ago.

The **NEW** version of Eveready's yellow AA cells look suspiciously like
the Millenium cells tho ... notice how they have a dimple in the anode
button, just like the Millenium cells ... for the sensor in the Gates
rapid charger?

11. Software decoding of POCSAG/DTMF?

Newsgroup: rec.radio.scanner
Date: 1996-04-01 00:00:00 UTC
From: smcintyre@whoi.edu
Message-ID: <smcintyre-0104961856410001@netnews.whoi.edu>
Source record: 237203

I may have my acronyms wrong...

Anyway, why can't I seem to find software to take the audio out of a scanner's headphone port and decode the POCSAG/DTMF information?

Is this just not possible for some low level reason?

Scott

I don't know if it's true discriminator, but it works well with
PD200.EXE. The pins under the only jumper in the radio provide pretty
good audio for data decoding. See my web page below for more details.

Hi Rick, sorry that you got stuck with a piece of shit. I sold my IC-R1
2 weeks after that I bought it. I still have a bad conscience about the
guy I sold it to. ah well, I call it damage control. I even spent 150 $
to modify the MF-1 filter so that the selectivity was enhanced but that
was a waste of money.

I would recommend the AR-8000.

It appears YOU need to read the Constitution, and/or talk to a good communications attorney.

GT> It boils down to laziness, pandering and wanting all your copy to 'flow'
GT> into the newsroom w/o anyone actually chasing down a source. If I can keep

Either you have NO idea how the media works, or you're deliberately lying to provoke him. TV and radio stations do NOT report something if they've only heard it on a scanner (or, they don't do it more then once, when they make a major mistake, ala the radio news guy in the Bay area that reported on a bank robbery, which turned out to be a movie crew shooting a scene. He didn't verify, and lost his job).

GT> I'm beginning to discern why you're so fanatical about this issue. From
GT> your grammer/spelling, the fact that it takes you a week to respond, and

I'm just wondering if there's any use to the rubber duckie that originally came with scanner now that I've upgraded to a telescopic one (standard RS model). Other than the flexibility, does the rubber duckie receive certain frequencies better than the metal telescopic? Thanks.

I believe there is a tradeoff here: you can get high-current NiCads
that are very finicky and easily abused, or you can sacrifice the
high-current capability and get a much more robust rechargable
battery. The 'Millenium' batteries with the lifetime warranty are an
example of this kind of tradeoff.
For scanning, high current capability is *not* a requirement.

First... Typing in all uppercase, unless you are using such an antique terminal that that is the *only* way you can do it, is considered `yelling'. Now... Having said that... I've tried the Austin `Condor' antenna on several of my handheld scanners and found that it *is* an improvement over the `stock' antenna. However... The antenna *I* finally settled upon for *my* use was the Diamond RH77CA. (I'm using it on an AOR AR1000 inside my car and having *very* good reception.) The Austin antenna just didn't quite `cut it' for my use but then I also happen to live *way* out in the country and so needed the little `extra' that the Diamond provides. If you *aren't* living out in `East Baum Fouck, Egypt' so to speak then the Austin *should* be quite worthwhile.

Doleo ergo sum,

DataFile's Probe Version 2.0

Scanning Enters the Fast Lane

by Larry L. Ledlow, Jr. NA5E

Introduction

Radio Shack PRO-2005 and -2006 radios have been the mainstays of serious scanner listeners for many years. Their scanning speed, wide frequency coverage, and memory capacity yielded excellent value for mid-priced radios. Unfortunately, both radios lacked computer control as sold off the shelf, and many users found the early modifications risky to install and awkward to use. In 1994 Optoelectronics introduced the Optoscan OS-456 computer interface for these scanners, and shortly thereafter the company produced the OS-535 for the popular PRO-2035 and -2042 receivers. The daughter boards' ease of installation and protocol based on ICOM's CI-V interface offered great promise to devoted, computerized scannists.

While several popular, general purpose radio control programs support the OS-456 and -535, their performance is far from optimized for the interfaces. DataFile's Probe for MS-DOS, however, was designed specifically for operations with the Optoelectronics hardware, not simply an afterthought or add-on to an existing program. Since its introduction in 1994, Probe has undergone steady improvement. It has always been a stable design, and most of the previous upgrades have been largely to accommodate changes in Percon FCC frequency data. Version 1.4, released in August 1995, introduced several important new features for COM port configuration and improved search performance.

New Features

Probe version 2.0, debuted in February 1996, represents a major upgrade, with several performance enhancements and exciting new features. The manual lists at least 30 changes and improvements. Among them:
+ A new, high-speed engine scans up to 37% faster, depending on CPU. Typical scan rates on my 50 MHz 486-DX2 PC approach 50 channels per second.
+ SmartScan(TM) allows the user to designate a bank of frequencies to scan for a specified period when activity is indicated on a key

channel. For example, I use SmartScan(TM) to initiate monitoring of fireground and other local emergency frequencies when the main fire and ambulance dispatch frequency becomes active.
+ Full receiving range (including 800 MHz cellular) can be enabled on the OS-535 interface for qualified users.
+ Duplicate frequency entries may be identified during scanning when the new Dupecheck function is enabled. Files imported from FCC license databases will typically contain multiple licensees on the same frequency, even though only one or two may be relevant for particular scanning needs. When a frequency becomes active during scanning, Dupecheck will automatically retrieve a list of all records containing that frequency, and the listener may delete the ones not required for scanning.
+ Two new export functions allow exporting frequency files and log entries to one of three ASCII formats.

The bound, 55-page manual is much improved over previous versions, too, and it includes a new, useful quick start section.

The program requires OS-456 or -535 Optoscan computer interface system installed in the receiver; an IBM or compatible computer running MS-DOS or PC-DOS 3.3 or higher, 640k RAM; 512k free conventional memory; a serial port; and a hard drive. Hard drive requirements are not specified in the manual. The program itself requires only slightly more than 400k, but specific scanning data files may require much more, depending on the number of frequencies in each group. Probe will run very well under MS Windows 3.x as a DOS window, although some adjustment of .PIF file parameters are required to get best scanning speed.

Probe was designed to work with only one receiver for maximum performance. Future versions may accommodate more than a single Optoscan-modified radio, but probably at some scan speed disadvantage. Since most listeners are likely to have only one OS-456 or -535, this does not represent a problem. Although two or more CI-V controlled receivers can be daisychained on the bus, messages from non-Probe devices may cause communications errors in the program. Probe does not fail, but the error messages can be annoying. If I want to use my ICOM R7100 while operating the PRO-2005 under Probe, I disconnect the interface cable from the R7100. The program will not control radios other than those compatible with the Optoscan interface boards.

Operational Concepts

Probe organizes scanning data into a certain hierarchy of groups, banks, and frequencies. A group may contain multiple banks, which in turn may contain multiple frequencies. The concept of banks is familiar to most scanner listeners. The PRO-2005 and -2006 radios, for example, may contain up to 40 frequencies in each of ten banks. I organize my scanner banks by service; e.g., banks 1 and 2 are police, 3 and 4 fire, etc. Probe banks are no different

conceptually, but each bank can contain up to 1000 frequencies. Moreover, each group can contain up to 99 banks. One may think of groups as different radios, any one of which may be selected and used at a given time. Probe supports up to 4000 groups!

The variations of organization are endless. Someone who travels a lot may choose to have groups representing different cities or states and then banks organized according to service code. I use public service, aeronautical, and amateur radio groups (GROUPS.PCX). My public service group has banks for each service code (BANKS.PCX). The aeronautical group contains separate VHF and UHF search banks along with banks of enroute and local airport operations frequencies. The amateur radio group contains search banks by frequency band and a single bank for local repeaters.

Once the listener understands the hierarchy, data entry and maintenance are simple. Extensive frequency data (FREQS1-4.PCX) can be entered manually, imported from compatible FCC license databases, and edited. Banks of search frequencies may be created from the utilities menu, specifying to which group the bank should be added, upper and lower search frequencies, frequency increment, and mode (SEARCH.PCX).

Although basic scanning operation is straightforward, the user should carefully review the manual for explanations of configuration and setting options. The extensive menu selections (CONFIG.PCX) and their relations to scanning performance are not necessarily intuitively obvious.

Once scanning starts, a comprehensive status display appears (SCANSCRN.PCX). The top portion of the screen lists group and bank details, frequency, signal strength, CTCSS tone, DTMF data, licensee information, distance, and more. The bottom half of the screen contains summaries of the last several active channels, and additional menu options. Manual frequency entry is possible from the scan display (MANTUNE.PCX). This permits the user to enter a specific frequency and mode, then to manually increment or decrement tuning with a single keystroke. Previously logged activity may be accessed from the scan display, too (VIEWLOG.PCX).

Overall Impressions

I have been a Probe user since last fall, just after version 1.4 was introduced. My main interest then was to use the program to control my PRO-2005 receiver using data imported from Percon's regional FCC database. I didn't want a program to control a vast array of radios. I wanted a program to control one scanner extremely well, and I was not disappointed. A side-by-side comparison with other programs such as Scan*Star (which I also own and use) is not appropriate, because their intended applications are different.

As with most software buyers, reading the manual was second on my priority list with that original installation. Although installation was (and still is) a snap, I was quickly overwhelmed with questions, because I failed to understand some of the basic concepts of Probe operations and configuration. Things became much clearer after a short while reviewing the manual, and I soon became a reasonably proficient user. In fact, the more I used version 1.4, the more impressed I became with Probe's power. Moreover, the program was very, very stable with my configuration under MS-DOS and Windows 3.11, something I cannot say is true for many of the other control programs I have tried.

When the product's developer, Perry Joseph, offered me a chance to beta test 2.0, I leapt at it. (I have no other relationship with DataFile, Inc.) The new features sounded intriguing, and SmartScan(TM) was just what I needed for some of my monitoring activities. In approximately 50 hours of testing over several weeks, I uncovered only a few very minor bugs with the beta software. This is quite a testimonial for the quality of programming behind Probe, especially since version 2.0 represents a major upgrade. As a telecommunications systems engineer for a major aerospace corporation, I have had enough experience with software design to have a good feel for what goes on "behind the screens". This new version has eliminated the use of internal overlays, and it subsequently makes more efficient use of memory and reduces disk access. Execution speed improves as a result.

Perry's main strength as a developer lies in database applications, an area where many programs roll over and die. Not so here. Probe's database tools prove even more powerful in version 2.0. Revised and additional import/export utilities and data viewing functions make up a significant fraction of the listed improvements in the manual. The changes reflect Perry's responsiveness to user feedback, too.

For more information on my experience with Probe 2.0, I can be reached by e-mail at ledlow@delphi.com.

Probe 2.0 retails for $129, but for the time being an introductory offer prices it at $99 plus $7.95 shipping and handling. Correspondence to DataFile should be directed to datafile@genie.com, 71571.3525@compuserve.com, or PO Box 20111, St. Louis, MO 63123.

I do know a little about this subject. Alot of McDonalds use Panisonic
headsets. There are 2 antennas one in the ceiling above the Drive thru area
and one above grill. There antennas for the headset are built into the belt.
There is a controller which acts like a repeater and keeps outside people from
transmitting on there system.

Hope this helps

...someone wrote:

>75 ohm cable will NOT blow your scanner.
*Right.

> What it will do is give you some signal loss.
*Right.

>Depending upon all kinds little stuff, you could experience about 2-4 dB loss...
*more like 1~3db.

>Pay the price, no steak this week, and get yourself some good RG-58/CU coax.
*DON'T do it! These are the loss factors for just FIFTY feet of coax:

RG58c/u RG8a/u 9913
50 MHz -33% -19% -11%
160Mhz -52% -28% -18%
460MHz -74% -45% -31%
860MHz -86% -60% -38%

Now folks, the above numbers will change SLIGHTLY from manufacture to
manufacture, but more important, it that the above numbers are for NEW
coax! Add age, moisture, uv/sunlight exposure and the numbers above go
higher! Read them and weep. Those are real-world numbers, so COAX is no
place to skimp on the secret sauce! Get the best.

>> Also, it's always best to have the same impedance, 50 ohms from antenna output to
>> scanner input for maximum energy transfer, especially at these tiny signal levels.
*Right.

>It's good to put amplification right at the antenna so that you're boosting the
>cleanest place in the line - the source.

*Right. In this case, the Pre-Amp gets it's low voltage operating voltage
via the coax, from a small power supply inserted before the scanner antenna
input. OR:

Antenna - PreAmp----------coax----------power supply---scanner
|
AC (120VAC).

> I just turned my deep fringe Radio Shack TV (yagi) antenna upright and mounted it
>on the end of a T-bar across the top of my existing TV mast with rotator.
>Not good to fasten the antenna right against the side of the mast. It should stand out a
> foot or so.
*For the purest, the TV antenna is mounted with the elements VERTICAL.
Next, we are back to issue(s) of 'ohm-matching' again. The standard TV

antenna output is 300 ohms. The better antennas offer 300 and 75 ohm output. Some have just 75 ohm out.

Also know that Weinguard offers high-gain antennas that will mount a optional Pre-Amp right at the antenna! These Pre-Amps are optimized for VHF and UHF TV bands and some offer a FM Broadcast Trap. What you get above and below the TV bands is up to God, the engineers' and your situation.

For those that have been 'dieing' to use that 75 ohm hard-line, this is the place to do it! You will have to get 'creative' feeding/forming the hard-line directly to the antenna, getting it into the house and to the scanner. NEVER create any hard bends to hardline! A short flexable 'pig-tail' of 75 ohms will be required for those who wish to use a rotor.

SEAL all weather-exposed connectors! When I was in the business, we used black electrical tape at the connectors and 'painted' roofing tar all over the tape. Next, 'paint' (with tar) all junctions where the 2 main feed wires attach to the elements. These main feed wires are parallel to the antenna boom and connect to all of the elements that are not directly grounded.

You may feel the above steps are overkill, but we live near the ocean and salt-air is a real killer of even the finest TV antennas. We have antennas still in service after 17 years! Only God knows what the coax efficiency (losses) are after so many years of u/v and water exposure!

Yet another tip, get electrical EMT conduit for your 10' antenna installs! The 1 1/2" to 2" diameters are perfect for most installs at 10'. Structurally it offers a much better mast and costs less if you buy it at a discount store. Most times, you can use two vent clamps and no guy wires will be required unless you are installing a larger antenna or beam and rotor. Don't use any vent made of PVC plastic.

***WOW! High-gain U/V antenna, Pre-Amp, hard-line, masts... I failed to mention the MOST important thing! Watch the AC house wires! Too many have lost lives or crippled themselves because they failed to LOOK for the wires first, didn't plan on a sudden gust of wind, or they simply lost their balance.

Enjoy the DX!

On 30 Mar 1996 09:39:32 EDT,
in newsgroup rec.radio.scanner,
hduff@humnet.humberc.on.ca (Hugh Duff)
from HumberNet LSS, Humber College, Canada thoughtfully posted:

> HELLO !!!
> If the speaker is indeed AC coupled to the audio amp then injecting
> 12vdc should not have passed through the capacitor. Now if it was DC
> coupled, then you would have problems.
>
> Hugh Duff VA3TO Toronto

Upon first insertion, the cap was basically a low-resistance path as
it charged up, so a healthy jolt could have made it to the amplifier
output. Think of it as just the rising edge of a single pulse. It
will pass through. The 220uF or so caps used are big enough to
deliver a deadly "jolt". That couple of milliseconds of current *is*
enough time to toast the output stage.

Also, the cheap miniature low voltage electrolytic caps used are
pretty intolerant to polarity reversal. When they are "reverse-biased"
they can draw current (read:conduct).

If the cap is not blown (it may not be bulging, but can be damaged
internally) then the audio output stage may be blown. :(

Also; Have you tried plugging in an earphone? In the brief time the
jack was inserted, it may have been connected across the speaker
(before the jacks switch disconnected it) and blown the speaker.

Sorry for the bad news, but it does not look good. :^(

Cheers,
Paul Grohe

I didnt miss your point...I ignored it because it made no sense.

Your post was about News Photographers listening to scanners and
responding to calls...you said that since we make money off of it that
we are breaking the law...so I will adress that issue.

The former Sheriff of Santa Cruz County,CA.contacted the US Department
of Justice to "report" news people useing the scanners for profit. The
justice department told the sheriff that the media was EXEMPT from that
law. That's it! DOJ's words...not mine...so just live with it! if you
don't like it I reccomend you contact your congressperson and complain
about it.

>because of the law, they can't be so blatent about pouncing on you.

They are not in the news business and they don't hold licenses to
broadcast on the PUBLICS airwaves. The point is moot.
>

>your codes.

Bull! I covered the King riots' and the LAPD never threatend to take my
press pass away...It's the same concept. a local law enforcement agency
in my area just switched to 800 trunked system...and If I got ANY flack
about obtaining the programming codes we would take them to court...just
like other media outlets have threatend to do across the country and
those agencys got the codes. If they decide to 'silence' our radios
during a situation then that will be reported by my station to thousands
of viewers.

Maybe the media is "in bed" with YOUR cops...but not here.

It's no secret to anyone on the bands that DOJ monitors cellular (and
cordless) traffic w/o the required wiretapping (sic) warrant - I hear them
bragging about the conversations they heard the night before. Do they not
realize that the monitors can themselves be monitored? An operation that
plays that loose with the rules would have no problem giving media an
'exemption' - it costs them nothing and they can undoubtably selectively
withdraw it if you start printing negative things about law enforcement.

Most of the above have business radio licenses every bit as valid as
yours. The bottom line is that they _could_ profit from what they heard
if the law allowed. You haven't said what makes media special to deserve
the exemption. Ambulance services provide much more of a 'public service'
than you do, but get no exemption. Ask yourself why. Lyndon Johnson used
to say of Hubert Humphrey, "He can't cause much trouble, I've got his
pecker in my pocket" (paraphrasing).

: (Purvayor of Fine Video)

I don't so much object to you monitoring per se, I object to the fact that you can do so with a wink from your local yokels and don't seem to realize that you're even being granted favorable treatment. I object to you treating it as a 'right', when it's clearly a privilege being granted you for political reasons.

It boils down to laziness, pandering and wanting all your copy to 'flow' into the newsroom w/o anyone actually chasing down a source. If I can keep up with the pulse of my local area by listening parttime and without going begging to law enforcement, why can't you? Then there would not even be the appearance of connivance and maybe then we could actually trust the stories you print about law enforcement.

I'm beginning to discern why you're so fanatical about this issue. From your grammer/spelling, the fact that it takes you a week to respond, and lack of credentials you come across like a papparazzi who depends on elint for the tabloid rumormills. This would explain why you said 'what copydesk', when you could so obviously use one.

50. FCC License Data Sources

Newsgroup: rec.radio.scanner
Date: 1996-04-01 00:00:00 UTC
From: bill@thd.tv.tek.com
Message-ID: <4jo9gt$n6n@tekadm1.cse.tek.com>
Source record: 237292
Cross-posted to: rec.radio.scanner,rec.radio.info

[last changed 03-Jan-96]

Changes preceeded by "|". Please e-mail corrections and additions to me.

The latest version of this file can be accessed via anonymous ftp to agora.rdrop.com in /pub/users/billmc/fcc_sources or via my web page at: http://www.rdrop.com/users/billmc

INTRODUCTION

This is a list of FCC license data sources available to scanner hobbyists. The FCC master contains a wealth of data about every non-government license in the United States (over three million records). Most of the sources listed contain a subset of this data, although a few contain all or nearly all of it. Government licenses are not administered by the FCC, and the data is not available to the public.

If you are interested in purchasing FCC data, you might want to consider forming a co-op of people in your area to share the cost. As far as I can tell, this is legal since the information is in the public domain. However, the software supplied to view or manipulate the data is usually copyrighted and must be purchased separately by each user.

Prices are rounded to the nearest dollar and include shipping, if known.

C.E.T.

CET sells records of all stations inside a 30-mile radius for $80. (Major cities cost extra.) A 70-mile search costs $178. The data is provided on floppy disks and is available in ASCII columnar and comma-delimited formats.

CET does not provide data for licenses that do not contain specific geographic coordinates (i.e., mobile-only systems) or specific operating frequencies (e.g., amateur radio).

To do the search, CET requires the latitude and longitude of the center of the 30-mile radius. I calculated mine from a USGS topographic map I obtained at a local nautical supply store. Alternatively, you can obtain the coordinates for your town from the University of Michigan's geographic name server. Run "telnet 141.212.99.9 3000" and enter your zip code. For my area, the server returned the coordinates of the main post office.

CET can be reached at 800-445-0297.

GROVE

Grove sells FCC data on CD-ROM and floppy. The CD-ROM covers the entire US and is available with or without mapping support. The mapping version brings up a map with the requested station plotted on it. The regular version is $104, and the mapping version is $174.

Floppies are available by state for $44 per state (add $10 for CA, FL, TX). The disk comes with a database search program. Grove Enterprises can be reached at 800-438-8155 (voice) or http://www.grove.net/ (WWW).

MICROFICHE

The Bearcat Radio Club sells the FCC master by state for $15. Bearcat Radio Club can be reached at P.O. Box 291918, Kettering OH, 45429.

PERCON

PerCon sells FCC data on CD-ROM. The Spectrum CD covers the entire US and comes with a simple database search program. Regional CDs cover
| subsets of the US but come with a more powerful database manager and
| provide more detail about each license. Also available is a Ham callsign
| and repeater database CD.

| Spectrum costs $37, and the Ham and Repeater Database is $21. Regional
| CDs are $137 for the first CD, $102 each additional CD ($560 for the
| entire 6 CD set). Data is updated twice a year. PerCon can be reached
| at 716-386-6015 (voice), 716-386-6013 (fax), support@perconcorp.com
| (email), or http://www.perconcorp.com (WWW). The Spectrum database can
| be searched free of charge via Percon's WWW page.

POLICE CALL

This is probably the most cost-effective source of public service license information. The detail is limited, but the information that is there is often more useful than the FCC master. For example, an entry in Police Call that reads, "Portland Police, Net 3, North Precinct," reads, "Portland, City of" in the master.

Police call is available in 9 volumes covering different regions of the US. It can be purchased at Radio Shack stores for $10 per volume.

RADIOMAP SERVICE

Developed by long-time Usenet contributor Bob Parnass, this service provides a custom report of frequencies, callsigns, and licensee names for a specified area in any of the 50 states. Coverage areas of 4 to 256 square miles will be chosen by Bob depending on transmitter site density. The report includes a color plot with transmitter sites marked.

To create the report, Bob requires the latitude and longitude (or nearest street intersection) of the center location. Reports are $26 each. Write to Bob Parnass at 2350 Douglas Rd, Oswego, IL, 60543, or call him at 708-554-3839 between 6-10 PM central time.

SCANWARE ASSOCIATES

ScanWare Associates sells a PC-based database program called the FCC Frequency Retrieval System V2.x. It comes with FCC data for one state, covering all services and all frequencies. Data is updated approximately
| every six months.

Cost is $35 for the first state and $20 for each additional state. Updates cost $30 per state. (Add $5 for CA, FL, TX, NY.) Quantity discounts available. Fully working shareware copy (FCC215.ZIP) downloadable from their BBS at 360-871-4228 (below 9600) or 360-871-4591 (9600-28.8k). ScanWare Associates can be reached at 360-698-1383 (voice), 360-698-8207 (fax), scanware@sincom.com (e-mail), and http://cutter.sincom.com/~scanware/index.html (WWW).

US SCANNER PUBLICATIONS

Similar in style to Police Call, this series of directories covers ALL radio services between 30 MHz and 2 GHz. Each volume covers one state and costs between $14 and $29, depending on the state. The volume for California is 820 pages. Contact US Scanner publications at 800-890-6999 (voice) or 503-233-5176 (fax).

APPENDIX

Here is table of data fields in the FCC master. Fields provided by various products are indicated by "#" or the field length, if known.

Ola,

Please consider the OPTOELECTRONICS TC200 Tone Counter ($179).

Locks on to a PL tone in .2 seconds and displays same on a LCD display.
In fact, it will display any active tone from 5hz to 300hz within .1hz
accuracy.

The DC440 ($259) will display the PL in alpha-numeric, as in "1A". It
will also display *Touch-Tones (up to 127 numbers) with scrollable
recall. Also detects and displays Digital squelch, DCS. It decodes all
these simultaneously!

You may be please to know it also has a RS-232 serial output for your
computer.

I just found a ad for the following:

"VHF PREAMP AND SPLITTER"

"It has two pre-amps in one case*." Two transistors that will operate up to 4 Ghz! Each transistor has 10db gain and a noise figure of 3bd (ouch).

Requires 12 VDC and includes schematics and hints for broadband use!

Sorry, I trashed the original message of the person requesting...

Bureau of Indian Affairs, Dept. of the Interior (not in order):

Direct: 172.775 MHz (PL 100Hz)
Repeater: 171.725 MHz Input, 172.775 MHz Output (PL 100Hz)
Operations: 165.1625 MHz and 173.7625 MHz
Emergencies: 41.27, 41.55, 46.63 46.81, 46.99, 414.65 and 415.40
Command: 168.7/170.95, 168.1/170.45, 168.075/170.425 and
414.75/417.3MHz
Tactical: 166.775, 166.935, 168.05, 168.2 168.25 168.475, 169.35,
168.4/166.6125 MHz 167.1/169.75, and 167.25/166.725
Fire: 168.4/166.6125 MHz

also try:
Mobiles: 406.475 MHz
171.750 Mhz and 173.7625 MHz
166.675, 167.95, 168.025, 168.55, 168.625, 169.15, 169.2 and 172.6MHz

A.M. MHz, Aircraft: 117.975, 121.9375, 121.9625, 122.8, 122.9,
122.925, 123.025, 123.05, 132.0125MHz.

Note: Frequencies shown as: xxx.yyyy/xxx.yyyy MHz are also Repeaters.
It appers that this agency likes the PL, '100.0 Hz' very much.

Enjoy,
Tony Cardenas

*Nick,
Much depends on where you live which department you are speaking of.
In example, many departments are volunteer and they often have old budget
two-tone pagers... 2 tones, pager beeps, you hear voice.

Here in LA County, Stations used the same method. Now it's 800MHz and
very tough to follow.

>Is there an fcc file on them like the licenses.
*Nope, the FCC cares less about tones; it's up to the communications
shop/business/guys/guy to keep things in concert.

>Any help?
>Nick
*Best bet is to ASK! Contact your FD in person and just tell 'em who you
are, "I'm Nick and I love to hear you guys on my scanner"! "Who can tell
me about the tones you use"? It's that easy. I had similar interests in
LAPD's 'next move', so I called and asked!

Within 15 min. I was talking to the chief engineer for LAPD and he LOVED
talking about his job and vital more funds were so they could do so and so
next... it was great!

BTW, I see a number of solid state alert monitors at the TRW swap meet...
the real deal is finding the right 'reeds' for the tones you will require!

A better way is to look for a home~brew decoder with 2 '567' IC's with
two 'pots' to adjust/set the tones. The speaker on when the tones are
deocded. Hummm?!

Jack,

Similar services are offered for stock market reports, sports/horse races (which, as you know, are all related)...

Where groups of alpha-numeric display pagers are set to the same frequency and share the same alert/page 'key'... The 'Key' is sent first, all pagers respond and pagers display the 'results'.

***BTW, has anyone found any 'hot' frequencies/keys in the LA area?! <BG>!

In LA and other cities there are other services that 'piggie-back' data on a FM Stereo Transmitter in the FM music band...it's called *SCA. MUZAK, Stock market reports and "Silent Radio" are just a few examples. Anyone have any luck decoding the DATA? *Decoding the music/voice part is a snap!

*ASK Bill Cheek about his New SCA Decoder Kit! He on the scanning NewsGroups...

jwayda@cogent.net "Jim Wayda" writes:

Morning Jim,

> Yes, But does the new logic board provide a 30khz step?

No. AFAIK the US/Canada are the only two countries to use 30KHz steps
for cellular (maybe wrong just don't know of any others). The UK actually
uses 25KHz steps but 12.5 "offset" so most people have to use 12.5KHz on
scanners over here.

Sets such as the UBC-3000XLT, PRO-26, PRO-2035 (that was), PRO-2042
(that might be), MVT-7100/MVT-7200 etc have full 800MHz but no 30KHz steps.
To get the 30KHz you have to use 5KHz or 10KHz channel spacing depending
on whats available.

Sets such as the PRO-62, UBC-220XLT also have "full 800MHz" but no
programmable increment steps. In these cases the default step size is
12.5KHz. Not ideal for trying to "hit" 30KHz spaced channels.

Hi Rafe,

Yes, the US band plan can be cloned to your unit with a U.S. Ar8000. If your scanner receives cellular and the U.S. one does not, then you will lose the cellular frequencies. Additionally, you will need the AR8000 cloning cable, which is NOT available in the U.S. (Go Figure!).
Here are a few of your better options:

1) Obtain a software program such as SCANCAT GOLD, and an AR8000 interface. This program will reprogram your AR8000 with the U.S. band plan, and the unit will be full coverage. SCAN*STAR has this ability also.
2)Send your unit to Grove Electronics in Brasstown, NC and they will program your unit for you ($40 + shipping)
3)Send your unit to USSN (US Scanner news)-they have an offer to reprogram your unit with a good US band plan for about $25 + shipping.

These are listed in terms of decreasing cost. The AR8000 is an excellent computer controlled receiver, and the initial cost of getting the interface and software is well worth it in the long run!

Hope this helps!

Hi again Rafe,

I missed the second question you had. I have two AR8000 interfaces.
One is the CAT232 sold by the Scancat Gold People. It has the advantage
of working with the AR8000 AND radios with a CI-V port (ICOM,
Optoelectronics 456/535, etc). The disadvantage is that it does not
have a hardware squelch detect for the AR8000, so a few software
programs will not work with it (SCANCAT GOLD and SCAN*STAR work well
with it, though). The other is the "official" interface sold to
distributors by EDCO, the AR8000INF. It is available through EEB in
Vienna, VA. It has worked with all of my software programs, but it ONLY
works with the AR8000.
Again, hope this helps!

Yeah, you find them right away because you're at point-blank range, you just turn the squelch all the way up and the scanner will only stop at the one strong signal from their phone. Hey, when you're this close why do you even need a scanner, you can directly hear what they're saying. Why not get a mile or so away from this person and see how easy they are to pick up?

You might want to check out the various add-ons that allow you to
target specific cell phones and can follow calls by monitoring the
data channel as well as the voice channel. If someone wants to listen
in to your cell phone calls, a few thousand $ will set them up nicely.

I have a universal adaptor too (from RS), but I got the set (270-1562)
that doesn't have any male adaptors. However, they do sell one
(270-1560) that does have male (and female) plugs, I stand corrected.

Not true... once on a strong signal sometimes you have to press
the search button 2-3 times to leave the signal behind! A friend
of mine has the unblocked 26 and has shown this to me! (i have the
blocked one and won't do the mod intil they find one that allows
the actual freq to be entered in)

18 USC 2510 and 18 USC 2511 as amended by the Digital Telephony
Act of October, 1994.

For the record...Congress attempted to
>legislate the illegality of monitoring cell calls. Just about all of you
>reading this know that your scanners can be modified to receive cell
>calls--either by clipping a resistor or placing the unit in diagnostic
>mode or whatever.

Just because it is easy to monitor cell phones has nothing to do
with whether Congress says it is a nono...

>Finally, to anyone who thinks their broadcasted conversations--whether
>cell or portable--are not being monitored please leave me email. I have

>some desert property I'd love to sell you. Oh, and again...if anyone
>disagrees with this, please email me with a correct, legal citation for
>the law that backs you up. Without that, your argument is about as
>powerful as a f*rt in a windstorm...

It is not a debate over whether people listen, whether you have
privacy, or anything but the "desires of congress."

Not only did I post the citations, I posted the sections of law.

There definitely using Wide FM. I confirmed it this past weekend and
found
them on the following frequencies:

Customer (speaker) 920.500 WFM
Clerk (headset) 903.500 WFM

Bob

> enought to understand. Will the Periodic antenna help? Does anyone have
> one?=============
Hi, George...
You should indeed see an improvement over the Discone, but not because the Discone is an inferior antenna at
all. The two types are very different in what they do.
A log periodic is very directional, and the discone is omnidirectional (a big word for saying it receives
equally well from any and all directions). Where the log periodic gets its gain is from the fact that it
concentrates its work in one narrow direction, rejecting signals from the other directions (this ignores the
fact that many such antennas have "lobes" in directions other than the primary lobe). So, the log periodic will
receive better in the aimed direction, but will miss signals from other directions, which the discone would
get.
So, you are trading one set of compromises (no gain, omnidirectionality) for another (gain, directionality).
Hope this helps.

Source record: 237331

A log periodic antenna will offer about 6-10x improvement in signal strength over the discone, depending on frequency and assuming you have the LPA pointed at the emitter. Considering the Create antennas are pretty darned expensive, you might want to try a lower cost alternative first. Maybe some good quality cable and a mast-mounted pre-amp are what you need. You could find a vertically mounted directional TV antenna useful, too, depending on which frequencies you want to monitor.

As an owner and 8 mo. user of an Ericsson digital, I would say BUY
!!!!!!

The long batery life, small size, and great sound quality are
unmatched by other cel phones I have owned/used even other digitals.

GO DIGITAL - you can't get scaned !!!

>Why not get a mile or so away from this person and see how easy they are
>to pick up?

What are you talking about???? You don't know me, you don't know my habbits, I was using that as an example... For the record, if and when I do scan that portion of the band, I hear a lot of stuff, I hear cell towers 2 cities away from me, people 2 counties away discussing their business and personal life... I don't have to be right next to someone to hear them!!!! I can go anywhere and pick up a tower, and listen to other people all over my area... I don't listen to the PERSON'S cell phone in the first place, I'm picking up the image of the cell tower, which has an effective range of 10 miles, how am I suppose to demonstrate that I can hear my friend from 10 miles away when he has to be with me to see and hear it for himself...

Another thing, this wasn't even the issue! I was only using that portion of my message as an example...

The NeXus!

95. Re: Here is my RS story.....

Newsgroup: rec.radio.scanner

In article <4jp3b4$1heo@usenetp1.news.prodigy.com> VUBS79A@prodigy.com (Drew Durigan) writes:

>>The best one was when I was at a RS back in Minneapolis. A
>>construction foreman came in, looking to buy walkie-talkies for his
>>work crew. What do you suppose the salesdroid tried to sell him? CB
>>walkies? NO! GMRS? No! Yep...you got it....HTX-202's! The droid's
>>exact words were "these will reach a lot further than those (points
>>to CB walkie talkies) and there's more channels, so you don't have to
>>worry about interference." No mention of license, test, callsigns,
>>etc. Unbelieveable!
>>
>>Radio Shack..."You've got questions, we've got answers. WRONG ones
>>that can get you a $10,000 NAL for unlicensed operation in the
>>amateur radio service!"

So don't forget to bash the local and national ham radio oulets. Over the years I have purchased a Icom 281, Yaesu FT-2500, FT-890, Alinco DJ580 and a Ten-Tec transceiver and never was asked for proof of being a licensed ham. I can also tell you about the crap some ham stores have tried to feed me, like the time I wanted to buy a antenna for a dual band VHF/UHF radio. The sales droid starts pulling out duplexers, cables and antennas worth about $200. Said it was what I needed. Yea, so I settled for a $50 antenna elsewhere.

OTOH, it is more fun to bash Radio Shack. The funny thing is they are still in business and I keep seeing people post what happens to them when they visit the stores. It leads me to wonder, if they are so bad why do these hams and experimenters keep going in.

grh

I think the wires that you see should have a small switch attached to
them. This is a reset for the unit, but don't touch it unless your
radio quits functioning properly. The band information for the radio
has to be manually entered via the keypad once the unit is reset. I
do have the info for this procedure here should you ever require it.

Anyone know what happened to the Aronsons in Denver Colorado?
They used recorded cordless conversations of their neighbors in court
as proof that the neighbors were harrassing them... Did they ever
get prosecuted for recording (as well as listening) to cordless phone
conversations?

I think I remember hearing that their neighbors (don't remember their
names) were fined for the harrassment though.

>What I want is:
>
>A voice activated system that activates a recorder ONLY WHEN A TRANSMISSION
>IS DETECTED. That way I can go have a real life and not worry about all
>I'm missing on that new found frequency which I have no idea who is using.
>If you consalt the FAQ it talks of a homebrew device that does this.
>What I'd like is a parts list minimum and maximum a premade device
>which I can take and hook to the phone jack of my Uniden Bearcat
>SC-150B on one end, and on the other a remote miced tape recorder.
>

How about just a simple micro-tape recorder for about $20-$30 that has VOX (voice activation) ? Radio Shack or any popular department store should have one.

I have used one of these to do just what you are describing with great results. You can plug your speaker out to mic in or just sit it next to the scanner, whichever.

Mike

Hi Keith,

all of the frequenices below should work. I've been confirming these
frequencies
since 1989. Several Fast Food joint have move to the new
469.xxxx/464.xxxx
pair in the last few months. I even found a McDonalds last weekend that
has
moved to 900Mhz Wide FM (920.5000/903.5000).

Hi, I'm wondering if any of the battery packs for other
handhelds can work with the Pro-43? The battery compartment just seems
too conveniently designed so it seems meant for one but kinda stupid
that RS doesn't have one.
Thanks.

Been listening in to cordless for just a couple of months now, and have heard anything from .. what "Honey" should pick up at the store on the way home from work, to: what "Honey" is going to get AFTER dinner - but one call really made me think about the accessibility of personal information over the airwaves...

The folks that live behind me... I now know their names.. and bank and account number - social security number - date of birth - mothers maiden name, and checking account balance.... the last 3 deposits and the last 3 checks that cleared.. Now, I knew that stuff was on the air, but it made my hair stand on end when I heard it firsthand.

NEVER give personal information over a cordless phone... just a reminder.

Rick

I know NOTHING about electronics, so please excuse my question if it shows my total Newbe status...

I have a Pro-2035 and have a roof mounted Radio shack antenna on a 5' mast.. I'm running 50' of RG58/U 20 AWG coax to my basement.. wondering if I can split that coax somewhere and run another stretch to a different part of the house upstairs. If this would cause a loss of signal, can I amplify the signal somehow? I have no problem with putting up another antenna, but I believe a splitter would be a little easier..

Thanks for your help..

Rick

rickard faivre (rickard.faivre@mailbox.swipnet.se) penned:
: How does one go about demodulating voice inversion encryption systems?
: Are there any computer programs out there?

Why would you want a computer program? Like, it's done in hardware.

Use a LM1496 balanced modulator chip to do the freq inversion. Sinple
circuit. But it's hard to find one sold that's all assembled because the
scrambler folks don't want their cheap toy scrambling method to be
compromised.

: Thankful for any help.

True, Radio Shack is far from the only retailer who will sell amateur equipment without seeing proof of licensure...but this is a whole separate issue, and wasn't my point.

Selling to someone who may or may not have a license and specifically wishes to buy an amateur radio is quite different from selling to a construction foreman who walks in, states that he wants a couple of radios to communicate with his work crew, and then being steered in the direction of amateur equipment by the salesdroid without licensing requirements ever being mentioned to the potential customer.

Howdy!

I am going to be living in the UK over the Summer and I was wondering
if it is legal to scan in Britain? I can understand that it may be
illegal due to security concerns, so I don't want to bring my scanner
along if it'll be confiscated by the police! Any help is greatly
appreciated! Thanks!

Cheers!

Sean

P.S. If it is legal, does anyone have the freqs for the North Yorkshire
pOlice in the York area?

Jeez, and I thought that folks were exagerating the problems with Radio Shack!

Went into a store in San Diego over the weekend. Told the droid that I was looking for an inexpensive scanner to listen to a particular trunked system in the 930Mhz range.

He explained (very rudely I must add) that they didn't have any models that did 900Mhz, only 800Mhz. Seems that the price cards all said 800, so that was all they did...

When he pulled all of the models off the shelf, he left one up. Turns out that it only had 100 channels, and of course, anybody listening to a trunked system absolutely had to have the additional 100 channels, because we all know that trunked systems typically use 50 or 60 channels at once...

Once I explained to him that their products did indeed go up to 956Mhz, that 800 didn't mean much to me since I wasn't buying anything I could mod to get cellular, that the trunked system I wanted to monitor had all of 10 channels, he proceeded to tell me that he had heard that there were "crystals" that I could buy to give me back the cell freqs...

And all of this from an extremely arrogant and rude salesperson who had just taken a "class" on scanners from RS!

They've got answers, all right. And they are all WRONG.

I think that in many cases it is because they are the only game in town. Most cities don't have a ham outlet or other electronics parts
supplier, so when you need a resistor or wire some Saturday afternoon, that's where you go. As long as you know EXACTLY what
you need, RS is usually OK, assuming they have the item. But, if you have to ask them any questions (even something as simple as
"what time is it?") you're dead meat.

>to do such.

No doubt enforcement is diffuclt and unlikely.

If you call up 911 and tell them you heard the police chief
swearing on his cellular phone or something... well... maybe your
admission about listening in would be taken seriously...

>Hence, no privacy with cordless OR cellular phones per example above. Sooo
>all of you 1 cent phone dealers with your nice fancy contracts and claims
>of privacy on cellular phones 'cause its against the law, take a hike. It
>has not stopped me or anyone I know and I listen every night!

There is no technology (nor effective) privacy. BUT, since when
did the law match reality?

>*Ironically this is the subject of a topic I will be presenting to a number
> of people tomorrow evening. I am sure I will be very unpopular when I
> am done with anyone who *sells* cellular devices. *

I doubt they care much. People want the phones, few seem to care
if any is, or can listen in.

>You get as much privacy with a cellular or cordless phone, as you would
>on a CB radio. One difference - CB radios neither cost for airtime nor
>require contracts of service. You buy the radio, one time expense, with

>antenna is under $150, and you own it. You do not have to pay so much a
>month ($29+) nor do you need to pay by the minute like long distance on
>every local call you make. True, it can't place or receive *phone calls*,
>but for the purpose of illustration, it has the identical same amount of
>privacy.

Actually, more privacy, cause you are likely to give out less
information with CBs...

Cordless phones are probably the worst, since ALL your calls will
be available to anyone in the hood to listen to! Cellular would
be hit or miss.

>So I hear something cute you said on a cellular phone and I tell you about
>it. Now .. you'd like to take action as it is "illegal" to do that, right?
>Just try to take any action, you will find everyone will laugh at you, they
>will say - where is the evidence? What? You don't have any? Prove this
>occured! Bang! You're in contempt of court for wasting court resources
>on a case you have no real evidence in, NEXT CASE!

A number of people have been recently indicted on charges of
selling cell phone monitoring equip (not police scanners).
Equipment that you put in the phone number you want to listen to
and... there it is...

Don't mix issues of evidence and ease of prosecution with whether
something is legal or not.

>I think that sums it up quite nicely.

Exactly. It's illegal. You probably won't get caught. You
probably won't get prosecuted, if you are caught. It probably
won't stop anyone...

Had a riot at the brig of the local Naval Air Station (Marimar, San Diego). A fireman called in to a local talk show yesterday, complaining that when the city fire dept. was called in to assist, the fire was reported as a 2-alarm "rubbish fire". Mentioned that in the past, firemen had been called to a plane crash and told there were were no weapons involved, when there in fact live rounds present.

Does the Federal government have a policy of misinformation for assistance calls of this sort that will be heard by all those "nosey scanner owners"? Anyone have any other examples?

In this event, a housewife on the base at the time called in a descrition on a cell phone to a local radio station and was apparently detained for 1/2 hour by the FBI and told she would lose her base privileges if she talked to anyone else.

128. Fast food / HF transcievers

Newsgroup: rec.radio.scanner
Date: 1996-04-02 00:00:00 UTC
From: kamst39+@pitt.edu
Message-ID: <4js1ff$ecl@usenet.srv.cis.pitt.edu>
Source record: 237162

Considering there has been problems with our local usenet server, I'm
hoping this message reaches the masses. ahh well.

1> I've seen many fast food lists around. Actually, Ive more or less
compiled a master list(hardcopy) of about 15 different lists
Now I've tried sitting in the parking lots of fast food places
but very seldom do ANY of the frequencies work. One freq. for KFC
one for MCD's(output), and one for Wendy's. Question, has anyone
had alot of these frequencies work? Actually tried, true, and tested?
Let me know specifically which frequencies , which restaurants, and
which location (local township/borough/county, city, and state) Just so
you know, I'm only compiling a list for myself, not for distribution
purposes however I would be happy to provide people with sites,
or other lists I have. The search for the frequencies have been
fruitless lately and Im not going to continue plugging lists after
lists into my transciever if everyone else has had the same bad
luck as myself with the fast food industry.

2> I'm fairly new to radios(a few months) and I was wondering the avg
price for a portable HF transciever. I need like 20-55mhz or
somewhere around there. Im sure thats probably not exactly the
HF band, but I believe its close.

3> Is there a technical reason (compared to a legal reason) why there
isn't 800mhz transcievers? (or are there?) Please don't suggest a
cellular.

4> How bout 900mhz? Transcievers available for that band too? Please don't
suggest a cordless, either. :)

5> As always, I'm looking for people in the Pittsburgh area to share
local frequencies.

6> While I'm posting, I may as well ask about 2-meter AMPS like 5watt
to 30 watt boosters. Costs, products to buy, products to avoid, etc

7> Also, Im looking for a good dual-band antenna something for a HT.

As I mentioned, my usenet server has been screwed up lately, so a response
by email would be greatly appreciated.

Actually Log periodic and Yagi antennas can be polarized whatever way you want. Most yagis in communications work are vertically polarized. TV antennas are Horizontal because there is less man-made interference in horizontal signals.

I couldn't get mine to do this (and it is restored). On the Pro-2026, the Mode of operation and channel step size are not individually selectable (as they are on the Pro-2005/6 for instance), and are fixed in the operating system software.

As far as I know, there will be no way to change the mode or channel step size short of replacing the code that makes the scanner work as it does now. This is probably just one of those bazaar quirks that somebody stumbles on to that ultimately is just a temporary amusement without a whole lot of usefullness.

Steve

lsi@aldhfn.aldhfn.org (Mark E. Daniel) wrote:
> A voice activated system that activates a recorder ....
> Secondly I need to know where I can get one of these tape recorders,

What you want is a voice-operated (VOX) recorder, an attenuator, and a cable with the proper plugs.
Most any inexpensive recorder with VOX capability will do. I'm currently using a Radio Shack desktop microcassette (#14-1190, $60 but occasionally on sale at $40). Its advantages are: cheap, controls convienent for desktop or stacked use, cheap, half-speed playback useful for the morse-impaired when logging repeater IDs, and cheap. Disadvantages: you'll need a 3vdc wall xformer (#273-1435, $8, or equivilent), and the index counter isn't very accurate.
The attenuator is required since the scanner output (line or headphone) is at too high a level for the mike input of the recorder. I picked up the R.S. #274-300 ($3.49) which takes an RCA plug and plugs into the 1/8" jack on the recorder. I also use a right-angle adapter (#274-372, $3), so the attenuator doesn't stick out. Radio Shack is supposed to have cables with a built-in attenuator, but I can't find them in the catalog.
Add a cable that matches the scanner and attenuator jacks ($2) and you're in business. Note that you want to use a "line" or "tape" output from the scanner if it has one, as headphone and speaker jacks are dependent on the volume control and cut off the internal speaker.

You are absolutely right..... but.....
Lighten up.....this isn't brain surgery.
I agree, there are a lot jerks in the ham radio ranks.....
That's why I listen more than I talk (I'm WB6GKI)
Maybe one of the reasons Hams are so sensitive about language is that
the FCC really does take a dim view of it, and you can lose your very easily.

Also, it may be a tendency toward the fact that they have a limited vocabulary.

have a nice day.

vr
Ron
WB6GKI

When they took back the Fourth amendment. . . I remained silent because I didn't deal
drugs!
When they took back the Sixth amendment. . . .I remained silent because I was innocent.
When they took back the Second amendment. . I remained silent because I didn't own a gun.
Now they are taking back the First amendment. I can remain silent no more.

Sadly, Sadly.....

Most of the time, what you want is a POCSAG decoder. This is a box which connects on one end to your scanner, and the other end to your computer. You scan the pager frequencies, and the computer will display the capcodes as well as the contents of the page (i.e. phone number). To find out what capcode your target is using, pick up the phone and page him at 2 in the morning then wait 30 seconds. You can find POCSAG decoders for about $200 in the scanner mags.

STANDARD Model C528A Delux HAM Radio, Dual-Band,
Hand-Held, Two-Way Radio!
Broad band reception: 130 MHz - 174.995 MHz VHF
400 MHz - 469.995 MHz UHF
20 or 40 memory channels available, depending on
features enabled. Scanning functions!
CTSS Tone Squelch Installed! DTMF functions!
RF Output: 350 Millawatt, 2.5 Watt, 2.8 Watt,
and up to 5 Watt with optional 12 VDC Power Pack.

NOTE: Many "keyboard programmable" features are
available on this unit! Expanded frequency ranges
possible are:

RECEIVE & TRANSMIT: 122.825 MHz - 176.800 MHz
328.000 MHz - 473.125 MHz
RECEIVE ONLY: 820.225 MHz - 972.500 MHz (unblocked!)

WARNING: It would be illegal to transmit using this radio
out of the normal HAM frequencies! I am stating the radio's
features for informational purposes only, indicating the
ability of this radio, and for possible use under a "real
emergency" condition!

While this radio has the ability to receive Cellular Telephone
frequencies, it is illegal to listen to them!

This is a very versatile, compact size, hand-held transceiver!
It is brand new, in the box, with manual, and warranty! I need
to sell it due to loss of my job. I never completed the process
of obtaining my HAM license.

ONLY: $300.00

Bill Crocker

Get *this* plain and simple: all such cases relied on the pre-1994
version of ECPA. The statute has changed to cover cordless phones,
and there are no post-1994 cases finding no expectation of privacy.

"Case closed," as you seem to be fond of saying.

: Is this just not possible for some low level reason?

Most soundcards would be incapable of decoding the stuff "on the fly".
You'd have to record it in a WAV file then post-process it. I've heard
of a shareware DTMF decoder, I don't see why not POCSAG would not also be
possible. However, if you are planning on doing a lot of this, your
hard drive would fill up very quickly.

Well, I remember having an accident, and at least five tow trucks showed up out of the blue. I guess they weren't listening on scanners, they just "happened to be in the area".

147. Why listen to phone conversations

Newsgroup: rec.radio.scanner
Date: 1996-04-02 00:00:00 UTC
From: aa728@freenet.durham.org
Message-ID: <Dp80Iz.KD6@freenet.durham.org>
Source record: 237181

I'm just curious as to people's reasons for listening in on people's phone conversations. I have a scanner I picked up for $10 (old RS 8-channel model that was very beatup) that could pickup VHF/UHF. I've received as many as 8 conversations (cordless) at once (half of which crystal-clear, and the others listenable). But I've found most conversations to be incredibly bland and boring. And as for the ones of interest, well there's some things I'd rather not know, as these people are all local. I have heard people I know personally, and things of great consequence (like someone who was telling her ex-boyfriend she thought she was pregnant... something I'd rather not know when I know her). Anyways, the scanner now sits in my closet collecting dust. So my question simply is, why do people listen?

Ahhhh, yes. Those must be those newfangled CZ type of crystals. If I recall correctly, the CZ stands for "Cellular Z" (Like Hi-Z and Lo-Z etc). I bought a few off of a realtor in Florida. [That's a different story, and I won't divulge any more till I can scrape up the money I need to buy a certain bridge which I intend to add toll booths to.]

The crystals worked GREAT!. I followed his step by step instructions to the letter. All I had to do, was 1) Make sure my scanner predated a certain date (they newer ones used a different crystal, which he was out of); 2) Open the scanner and remove the old crystal (labeled D-<somehingorother>); and 3) glue the new crystal in place.

It worked perfectly! At first I was a bit hesitant about the price, but the realtor assured me, by telling me that folks do the same thing to their computers every day (except a Pentium costs much more than the $100 cost of the CZ)... he said it's called "upgrading".

With the simple $100 part, my $300 scanner is worth much more than it was before. The guy also told me about an EM crystal (Extended Memory) which he can sell me to $70. He says that this EM crystal will increase the 300 channel memory to 400 channels. It's cheaper than the CZ because it is lower tech and actually requires that it be soldered into place, unlike the high-teck CZ which will work with glue.

Feel free to pass the above information on to the aforementioned RS clerk since it appears that he doesn't know enough about this CZ and EM stuff if someone actually wanted to know _how_to_ and _where_ to get these crystals.

I have a BellSouth 10ch cordless and I was wondering if there
was any way I could change the frequency, not by much.
Just to avoid all the interference from the other cordless
around here.

Check out the April edition of Monitoring Times page 92.

Their WEB site can be found at http://www.grove.net

151. What features should I look for in a scanner?

Newsgroup: rec.radio.scanner
Date: 1996-04-02 00:00:00 UTC
From: grady@netam.net
Message-ID: <grady-0204962138400001@ppp-1-5.bowgrn.netam.net>
Source record: 237185

I'm thinking about buying a scanner and I'm wondering what features should I look for? I've never used a scanner before but think it could be quite fun and informative. Would also like any recommendations on brands but would request I be emailed those as to avoid a flame war and such. Mainly what features, about any mods that can be done,etc. It would serve primarily as a base unit but would like portability for racing events,etc. Any pointers?

TIA,
Grady

Hi Keith,

he's a series of URL's that contain Fast Food Frequency lists:

http://www.panix.com/clay/scanning/Frequencies/handy-info/fastfood.txt
http://www.panix.com/clay/scanning/Frequencies/handy-info/fast-food.txt
http://www2.cy-net.net/~kg5ai/freqs/fastfood.html
http://www.SineWave.com/chelsea/fast.html
http://www.orst.edu/~varineb/fastfood.htm
http://www.li.net/~j4dice/scanning_info/fastfood.html
http://www.zianet.com/files/users/kc5kto/generalfrqs/misc/fastfood.frq
http://www.shadow.net/~mikef/fast-foo.txt

Here's a list that should work. I've been confirming these since 1989:

Have been using Winradio for several weeks. In short : software
is great, radio sucks.
My ICR7100 is away for repairs and I now have the choice of using
Winradio or my old PRO2021. I am finding myself preferring the
Pro for normal monitoring local emergencies. On the same antenna,
(Diamond 707 active) it has far superior receive and rejection of
trash. Of course, it does not have the coverage and the Winradio
scans faster with more features.
As I said ,the software is great but it does have shortcomings.
For instance, you have to cancel scan to change squelch settings.
Might not sound like much but the setting has to be varied when
changing bands....a real problem when scanning crossband
channels.
There is also an annoying hash as a station drops the microphone
button as the squelch control seems to have a builtin delay even
when the delay is set to minimum.
In summary, I dont use it except when I want to play as against
wanting to listen.

Interesting stuff!

IMHO the commercial radio makers will eventually turn to the scanner market as a source of profit. Or, the industry will find a way to 'clone' the currently-proprietary trunking technology (remember the PC clone wars? IBM really believed they had a proprietary product at one point, and look what happened!) In any event, trunk-capable receivers will come onto the consumer market one day.

Most of us would gladly pay a royalty fee to be able to scan our favourite agencies - and many of the agencies are strapped for funds. Some, like police forces, will want to make their comm's public to build trust.

The technology will make it possible for police agencies etc to keep their more mundane comm's 'in the clear' while maintaining privacy when they really need it.

>Since there is no appearant breakthrough in antenna design coming soon, reception itself will not improve much

Gee, didn't cable TV start with the need for better reception? As homes are wired for greater telecom capability, there will be a greater range of commercial offerings. Maybe we'll be able to buy the signals on a cable-like converter!

Cheers
Paul

>JunKie <seizure@fdt.net>
>Feel free to flame me at any time.

Nahhh...no reason to flame you, but you might want to look at your
book a little closer. I've got the 95 edition (orange) in front of
me, and if you look at the front cover on the bottom it says
"Copyright 1994 HOLLINS RADIO DATA". Also on the title page it
repeats the Hollins with their P.O. box in Los Angeles, CA. Radio
Shack is the number one distributor of the book (thus the Radio Shack
name at the top of the cover), but the book is also available at other
radio stores (sans the Radio Shack name). When you quoted the above
remark to contact your dealer, they mean Radio Shack. When they say
don't write them, they mean Hollins. Hollins and Radio Shack are not
the same.

I don't know what store you go to, but the one I run (yes I'm a RS
manager) has it's own scanner (and shortwave) list freely available
for the asking. I have many times helped newbies listeners with both
freqs and how to program them in their scanners (both RS scanners and
BCs - which I don't sell).

The point is, be sure of your facts before making such outrageous, and
generalized comments. I know there are good and bad RS stores, so if
you find a bad one, check out the one down the street. Chances are
you'll find what you are looking for.

Regards,

Rodney, KB0SPZ

Sorry I missed this before I posted a reply tonight (4/1). But my advice still stands...if you get poor service at a store (rude, or just doesn't know what he/she is talking about), go to one down the street. I would also ask if there is a ham in the store. There are some of us out there that work for RS, and you won't get any sales BS out of us, just an honest attempt to answer questions (and I've had some pretty weird ones...but that's another thread).

OptoElectronics APS-104 Active Pre-Selector
-Tunable band pass filter system
-10MHz to 1GHz
-Continously tunes over more than 5 octaves
-Maintains a constant 4MHz bandwidth over entire range
-Electronically tunes
-Ultimate Security Sweeper
-Extend Near Field detection distance 10x
-Includes Internal Rechargable battery pack and charger

New this is $1000 from Opto, I am asking $600 or best offer

The unit is in perfect conditon, and has seen very little use.

The perfect use for this is in conjunction with the Scout or Interceptor,
it provides a very significant boost in capture range.

I was using it with the Scout/AOR-8000 combo and it worked great.

I purchased this for a project and no longer need it.

For all the info check out Opto's web site :
http://www.optoelectronics.com/aps104.htm

>SCANNERS SPEAKER!

I'm all too sure that your above examples are true. Unfortunantly RS
does not train their sales people as well as they should. I speak
from experiance as I'm a ham and a RS manager. I've seen poor
answers, both before and since I started with the company. But I do
have to wonder, why did you as a question...only to correct the
salesman's answer. I have had several customers who get a "kick" out
of proving their superior knowledge. I rarely take the bait. If they
are right, I acknowledge it (and learn a little - you're never too old
or too smart to learn something), and if they are obviously wrong
about their answers, and I can't convience them otherwise, smile and
go on. I hope you are not in that group who like to bait the poor
under educated, underpaid sales help. Most of them won't stay with
the company that long anyway (you kinda need to be a little geeky to
really enjoy selling this stuff all day ;-)). If you are serious
about get real answers, then don't hesitate to ask if the salesperson
has his own scanner, tranciever, etc. Chances are, if they do, they
will respond graciously to your question. If they get defensive, then
go to the store down the street. Maybe you'll have better luck there.

>

Although one might only hear one conversation in 10,000, he probably wouldn't be the only one listening to cell phones in the same city. When I get bored enough to listen to the cell frequencies, I usually will monitor about 20 or 30 complete conversations, not to mention the boring ones I skip over. I presume there are many more "cell fans" in the same city. So in conclusion, I would predict that you have good chances of not being heard when talking on a cell phone, but don't count on it.

Actually, the amateur radio license is only required to OPERATE the equipment. There is NO law prohibiting the ownership or posession of such equipment without a license. Someone who has no ham license can walk in a ham shop or order from mail-order any ham equipment and the purchase and subsequent posession is entirely legal... that is until that person keys that mic.

Still, many vendors, especially RS, don't really care about that. One person's "green" is just as good as another's.

>of mine has the unblocked 26 and has shown this to me! (i have the
>blocked one and won't do the mod intil they find one that allows
>the actual freq to be entered in)

If you look at the PRO-26 Service Manual you will see that there are two models of the PRO-26. One sold in the USA & Canada which has the model number 20-506 and one sold for the UK, model number 20-9506.

The two units would appear to be identical except for one thing....IC505. This is the main CPU and one assumes where the frequency coverage is stored. A different IC is used in each model. As far as I can see the only way you are going to modify your PRO-26 so you can key the actual frequencies in is by replacing this. Not quite so easy as adding or cutting a wire.

>Cheers, Ron Cain

I suppose that would work, if I wanted to fastforward through maybe 3.5
hours of silence scattered all over the place. We aren't talking cell
frequencies here people. I guess I need to be more specific.

What I want is:

A voice activated system that activates a recorder ONLY WHEN A TRANSMISSION
IS DETECTED. That way I can go have a real life and not worry about all
I'm missing on that new found frequency which I have no idea who is using.
If you consalt the FAQ it talks of a homebrew device that does this.
What I'd like is a parts list minimum and maximum a premade device
which I can take and hook to the phone jack of my Uniden Bearcat
SC-150B on one end, and on the other a remote miced tape recorder.

Secondly I need to know where I can get one of these tape recorders,
because I don't recall seeing any new ones for sale which have this
feature today.

I can not afford to purchase another scanner. I can afford parts
and maybe to pay someone a little extra to put it together or give
me a scamatic,

From: sprouse@pgh.net
Message-ID: <4jrd8f$cbm@dropit.pgh.net>
Source record: 237239

Does anyone know if Radio Shack is about to discontinue the PRO-62?
I recently had the chance to use one for several days and was very impressed with it. The last catalog I got from Grove listed them for either $209 or $219 which I thought was a good deal. Yesterday a friend told me that he saw either a print add or a WEB page where they were listed for $174.95. At that price I think I will take the plunge.

I would like to hear from anyone who has a PRO-62. Do you have anyting good or bad to say about it. I know it it triple converson, but is it up or down? How is it on front end overload? If they are not being discontinued should I wait for Dayton? Any info will be appreciated.

Sense I have moved to a somewhat rural area I have decided to get a mobile antenna for my car. I would prefer a mag mount as opposed to an on glass mount or drilling holes in the roof of my car. I would appreciate your recommendations.

John

Remember that the Log Per or Yagi ants are horizontally polarized. the
discone is vertically polarized. There is a difference. Much of the
mobile traffic is vertical, since they use whip ants.

>: antenna you ever saw.
>
>I am wondering if this will actually work.

Certainly... for anything *retransmitted* over the cable system.

>Certainly you would get overload from the cable freqs right?

Not really... The signal comint through your cable is adjusted to
a level acceptable for a standard TV receiver.

>What about when cable companies send out their "silver bullet"
>every 6 months to fry fake chips (cable stealers)?

As long as your scanner isn't monitoring the datastream, you won't even
know it exists. If your scanner is monitoring the datastream, it still
won't affect it other than a presenting a modulated signal to the scanner
which the scanner won't understand anyway... so no real effect.

>What about interference?

Only if the cable system is leaky.

>How can this be possible?

The cable system is a closed system. At the head end, the cable company
has one receiver and one modulator for each frequency on the system. They
hook up an external antenna (or dish) to the receiver, tune in the station
they want to rebroadcast, and then connect that receiver output to a
modulator which "retransmits" the signal over the cable system.

>Has anyone else done this?

Sure... I've done this to chart out all the frequencies the cable
company in my are put onto their system. I didn't have to worry
about one speck of interference from any signals not on the system.

>What kind of neato outer-space stuff can I pick up? :)

CSPAN, CSPAN2, ESPN, TBS, HSC, QVC, TLC, HBO, SHO, etc.

IOW: Nothing which the cable company didn't put there.

> Not true... once on a strong signal sometimes you have to press
> the search button 2-3 times to leave the signal behind! A friend
> of mine has the unblocked 26 and has shown this to me!

I guess I'm lucky that I don't have that problem with my Pro-26,
even with strong signals. It always stops on the proper frequency
(not before), and I don't get stuck with 5kHz stops when pressing
the search button. Even putting my 26 on top of a computer or next
to a TV cable outlet (I haven't tried climbing a cell transmission
tower yet), will only very occasionally make it get stuck in between
30kHz frequencies.
Maybe your friend should adjust the AGC on his 26 (using RT-2),
or perhaps it could benefit from a general alignment.

> (i have the blocked one and won't do the mod intil they find one
> that allows the actual freq to be entered in).

I personally can't see any advantage of programming actual cell
frequencies, since all one generally does is use the search mode
when listening to cell transmissions, so there is no *practical*
gain in using actual, versus image frequencies - the reception
and sensitivity are identical. If someone is bothered by some
interference around 1200MHz, let them use a diode or switch instead
of a jumper on IC-1, which will solve that problem - except, it may
discourage some people from attempting the mod; they may go for the
jumper, but not anything more complicated.

A new McDonalds near me opened last Thursday and they also have
"Face To Face" ordering. However, the Clerk at window 1 is still using
a headset to communicate with the Clerk at the Windows 2. Most of these
new McDonalds are also using the 469.0125 (repeater) / 464.0125 (headset)
combination.

r> My local radio dealer has the CTE T601 for 45 Irish pds, which he says is
r> very good and suitable for scanners. Would that one be a good choice?
r> Any other recommendations? Could I use a Discone for transmitting with a
r> CB radio?

Most 'scanner' discones don't cover lower than about 50 mhz (definately not lower than 30 mhz), so it won't be very good on CB. That model isn't one I've seen here in the 'States', but most of the ones available here are similar, except the Radio Shack one, which is aluminum rather than stainless steel, and doesn't have the low-band (30-50mhz) upper piece included.

... You can't win. You can't break even. You can't even quit.

>Please leave email or respond here

NO... You will NOT be able to understand anything they say... My Sherriff's Office here in Mississippi just updated from a type-II trunking to an ASTRO-III system, which will all be digital, even though its online no one is using it yet, its still analog, I had the pleasure of hearing a test of the NEW digital stuff, it will sound like a BURST of noise like MCDID... Anyhow no there is no way you will be able to decode this... In order for you to do so you will have to Purchase a Motorola-ASTRO (Saber-systems) radio, which is around $4000,00 new, then you have to get permission from the chief of the Department to have the ID placed in the radio in order to turn it on to the repeaters. The digital is highly new, and sofisticated, and our department is looking forward to the transistion due to the fact that multiple conversations can go on the same channel space without interference. Also Digital is much cleaner (in theory)... As for all of us Scanner/monitors, you can pretty much kiss it goodbye because it just isn't going to happen.

I wonder if there isnt a mod for it. I have an older one and got a new
one also. Isnt there any other mods besides the jumper clip for the
2026? Does anyone have any input on this? I would be curious to know.
I doubt that its NOT restorable, simply because they've said that about
other radios and low-and-behold, mods have came out of nowhere. I wonder
if mods for the bearcat 760 XLT (is that the right one??) would work.
Basically they are the same radio with only a few variations.

Check out Grove's web page, or specifically,

http://catmac.grove.net/CGI.SPG?L=F&P=SFT+11

A friend uses one, it works (not for DTMF, there are software based sound card decoders out there for that) but gets pretty boring after a few minutes. Most people don't realize that in a large metropolitan area there are 30-60 alphanumeric pages sent PER MINUTE on a given channel.

I've noticed that the drive-through deviation level (amount of frequency swing caused by audio modulation) is sometimes quite high--greater than the "narrow FM" setting on my scanner, but much less than the 150 kHz "wide FM" setting on my scanner.

So, yes, it is *WIDER* than narrow, but probably much less than your typical FM broadcast station.

You are referring to common law judgements which have since been superceded
by legislation. (Case reopened!) The changes that went into law last year
make it specifically illegal to monitor cordless and cellular phone calls
unless you have a court order or are a party to or have permission from
the parties to the conversation. The "no expectation of privacy" defense
has not been applied to the new laws.

In reality, you should not expect privacy when using non-encrypted
analog cordless or cellular phones. However, it IS illegal.

You might want to try a few parts from Radio Shack. I bought a telescoping antenna from RS for about $10. It is approx. 26 inches when fully extended. I also bought a suction cup mount with a six-foot cable for about $11. Both have BNC connectors. I can use either my original rubber duck antenna or the telescoping antenna with the suction cup mount.

I place the suction cup mount on the inside of either my home or car window with the antenna I currently want to use. While this will not work as well as some of the very expensive antenna solutions people use, I think it works great. I have definitely noticed much better reception at home and in the car. Since the antenna is temporarily stationary, you can move the scanner without affecting performance. This is a portable solution at a reasonable price.

I don't have the part numbers with me now. If you need them, e-mail me & I'll send them to you.

Cross-posted to: rec.radio.scanner,alt.radio.scanner

I want to buy a Discone antenna (going to be mounted on the roof) for my
Yupiteru MVT-7100.
My local radio dealer has the CTE T601 for 45 Irish pds, which he says is
very good and suitable for scanners. Would that one be a good choice?
Any other recommendations? Could I use a Discone for transmitting with a
CB radio?

-r303

Ray,

You brought up another situation at RS that hasn't changed in over 20 years. The problem is that they never send the stores a sufficient quantity of merchandise. I can remember getting in shipments of new goods where only one item was shipped! This went on display and if someone wanted to buy it, they had to buy the display.

I know what abuse displays can go through and this is why I NEVER buy displays. The only time I would buy a display is for a minimum of 50% off. Heck, it is a used product. Anyone that buys floor or

display models from RS is nuts.

If RS would properly stock their stores, and ship the merchandise that the store managers requested, their sales would increase dramatically. But they still continue to do business in a stupid, profit reducing manner.

I'm looking for a desktop recorder that will record the time digitally
on the tape when you make a recording. I want to make note of the times
the recording is made off my scanner. It must have a remote jack.
Sony used to make a walkman type and Radio Shack makes a micro verison.
They have a digital counter that displays the time during the playback
of when the recording was made. Does anywhere know if anyone make
a desktop verison?

I can hear the LAPD between 1268.00 and 1270.00. I have only tried this in the late evenings/early AM. Could a ham repeater be rebroadcasting their transmissions?

The difference between the 1200 and 506 mhz broadcasts is that I can always hear the mobile unit's transmission clearly on the 1200 mhz.

223. Pls Help w/ Helena, MT & Anchorage, AK Frequs.

: this question to Eric Christensen, KA6IHT, who writes the "Public Safety -
: California" column for the RCMA newsletter? His CompuServe address is:

: 71162.1260@compuserve.com

: If anyone knows the answer, he would.

Actually - way 8*) A long time ago (probably about 8 years ago now)
I ran across a couple of officers using a 1280MHz ham repeater to coordinate
their patrol sweeps around the Santa Ana courthouse. At least these guys
had their ham tickets... (let's just say it ain't always so)

Another possibility: A number of agencies in the greater LA/OC area
coordinate in some way shape or form with ham groups. While, traditionally
this had been primarily on a disaster-preparedness level, in recent years
some of these relationships have evolved into auxilliary/citizen-watch
types of operations.

Some agencies in and around LA have been known to use ittinerant buisness
frequencies for surveillances - 1200MHz would be an odd spot to set up
shop, but chances are the target's not gonna be listening there 8*)

Any chance you can describe the activity and/or the specific frequency
you heard this on?

I dont know about ohter areas, but the McDonald's here are changing to "Face To Face" ordering. Doesn't this defeat the purpose of using the headsets? In doing so, does these particular restaurants (using the term loosely) still use headsets in some fashion?

My other question is did McD's do this to avoid people listening to their conversations, or is it a marketing ploy to make ppl think they are special by personally taking their orders face-to-face?

Just a thought...

A new McDonalds near me opened last Thursday and they also have
"Face To Face" ordering. However, the Clerk at window 1 is still using
a headset to communicate with the Clerk at the Windows 2. Most of these
new McDonalds are also using the 469.0125 (repeater) / 464.0125 (headset)
combination.

After regretting the sale of my MR-8100 scanner a few years ago, I was just able to buy another one. Now I can't seem to remember how to get the damn thing to connect to the computer for programming.

Do I use a "patch cable" that has a 9 pin female connector on each end??? Or what???

I know this is so simple, but I can't seem to get the right combo and keep getting a message that says it can complete the communication connection or some such error message.

HELP!

This will NOT work. The cable going to your home IS NOT directly hooked
into any kind of satellite dish. They get their signals then put it into
the cable.

NO!!! THESE HEADSET ARE WIDE FM!!! NOT NARROW!!!

They come in very clear when my AOR8000 is in Wide FM mode, and can not
be heard when it's in Narrow FM.

These headsets were manufactured by "GM". The narrow FM headset
are manufacture by Panasonic.

It depends where you live. There are different nets throughout the
country. When you find one or several in your area, and if you are
interested in getting pages for major fires around the country, make sure
your local net has a reciprocal agreement with other nets.

> My only question is this, and I should add that I've been purchasing items at R.S. for as far
back as I can recall, why do the sales personnel ALWAYS see me coming and
instead of giving me a fresh unit of whatever I am lookin g at, (say a scanner), get the box
for the display unit? When pressed, they will usually get me a fresh unit.
Do they have to keep changing the display units for some reason? I've been burned more
times than I'd like to admit by getting talked into taking the display unit if that may be the
"last One". Otherwise, I have had exceptional luck with every radio I've gotten from R.S. through
the years. One thing that I like to do is check out the product as well
as possible before going to purchase it. That's where the magazines come
in very handy when they do a review. If any one knows why they push the display
units, let me know, I'd like to know if it happens to everyone or just me.

Source record: 237106

Here's something fun to do that I came up with the other day. If you're bored and looking for some cheap entertainment, try this:

Most (if not all) Wal-Marts now use Motorola handhelds for in-store communication. These use the interant frequencies of 151.625, 154.570, or 154.600. I have also noticed that not all employees have access to the handhelds; only certain "higher level" types. I came to this conclusion after spending an extensive amount of time sitting in the parking lot of various Wal-Marts and listening to their communications. Gossiping about customers and other employees (presumably the ones without "ears") is quite common.

Anyway, here's what you do: first, monitor from the parking lot with your own scanner and determine which frequency is in use at that particular store. Then, go back to the Automotive department. Look at the car stereo display. Along with all the tuners, speakers, CD players, and cassette decks, you'll also find one or two mobile scanners mounted in the rack and operating (usually the cheap Bearcat 16-channel model, and sometimes also a Beartracker will be there) Make sure the scanner is hooked up and operating, and then punch in the store's frequency. Set the scanner on "manual" so that it stays on that channel (or, even better, program it into all 16 channels!) Set the squelch and then turn the volume up full-blast. Now, get away quick and wait for the radio to go off. Watch the look of astonishment on Wally Salesdroid when he/she realizes that it's his manager/department head/etc. that is blasting from the speakers! Especially effective if Wally isn't one of the "privileged" few that has been issued a Motorola!

Great fun!!

AT>Organization: Louisiana State University

AT>Why is this little gem being discontinued? They were supposed to be
AT>awesome, I thought.
AT>--T

Someone on FIDO posted a new version (replacement model) will be available.

There were lots of little bugs with the HF-150. They are explained well
in the Passport White Paper. One major complaint is it is short one
digit in the display, i.e. OK for broadcast but not for military. The
radio needed the optional keyboard to be used. By the time you finished
with the Barbie Doll accessories, the radio was 20% less than a Drake
R8. Granted the Drake isn't portable.

The new AOR (7030 or 7080) may be a good choice, albeit at a higher
price.

It would be hard to list all the psychological reasons for wanting to
listen in on ANY frequency. I guess the main reason would be
entertainment. It's kind of like asking someone why he or she likes to
watch "ER" or "Friends" or "The X-files". Some people like these shows
some do not. Some people like certain hobbies (radio scanning) some prefer
other hobbies. I personally find the Cell and cordless frequencies very
entertaining, but I also know that others don't really care. Obviously you
are one of those. You might also find that we don't like the same TV
shows, the same sports, etc.

When you get your service manual ~10 bucks look on the microprocessor pin designators you will be looking for a pin labeled peep (just from memory). On many of the radio shack scanners this pin can be traced to a connector on the logic cpu board. When or if you can find this connector (or pin on the microprocessor) simply cut the wire or trace carefully (if its the incorrect one you will need to be able to repair it). An alternative is to insert a 10-100k ohm resister in line with this trace or wire thus reducing its volume.

Good luck and hope this additional info helps.

Go to radio shack, and ask for a CB to BNC adapter, screw a standard CB antenna on one end and connect the other to the scanner.
or, also at radio shack, get a COAX to BNC adapter and a splitter and (2) three foot pieces of VCR coax, hook your incoming TV cable to the splitter, and then hook one of the cables to the splitter and then to your tv, and the other cable on the splitter, and then on the coax adapter. Hook the adapter to the BNC port on your scanner and use the cable company's very own SATTELITE dish as the worlds biggest da**ed scanner antenna you ever saw.

I have used both of these messages for 4 years and have NEVER had to replace a scanner for overpowering the receiver or any other reason. Neither one of the options above should cost more than $30 - $40.

PRO-43: I have two for sale. Both are in good condition with one having a few more cosmetic scratches than the other. Both have been modified to "restore" the "missing" frequencies and the audio has been modified for better tonal quality. They come with an antenna, belt clip, new ac to dc adaptar and new alkaline batteries. $250.00/obo each.

PRO-39: In good condition with some cosmetic scratches. Freq modified same as above. Comes with antenna, belt clip, new ac to dc adaptar and new alkaline batteries. $200.00/obo.

PRO-42: 10 channel. Good condition with cosmetic scratches. Battery door is loose and must be held closed with tape. Comes with antenna, belt clip, new ac to dc adaptar and new alkaline batteries. $70.00/obo.

Shipping is not included. COD or prepay only with USPS money order.

267. NEW Standard AX400 scanner quick impression

Newsgroup: rec.radio.scanner
Date: 1996-04-03 00:00:00 UTC
From: dtse@intergate.bc.ca
Message-ID: <4jtedl$1v4@carrera.intergate.bc.ca>
Source record: 237129

I have got a chance to play with a brand new Standard AX400 scanner.
You can find the ad in CQ ham radio magazine from Japan recently.
It receives from approx. 0.5MHz to 1.3GHz non stop, AM, NFM, WFM in
any frequencies. It runs on 2 AA cells and is very very small, light
and thin. It has got good audio. It has 400 ch. memory. I don't know
if it can be separated to "banks". It uses similar accessories to the
Standard 508 mini dual-band ham radio (about that size as well.)

The unit was newly bought imported by my friend from Hong Kong. He paid
approx. $2800 (HKD), which is about $360. (USD).

I really like the size and the wide band receiver. 144MHz ham band
sensitivity is as good as my Standard C550 (similar to C558A) ham handheld.
AM broadcast is very clear, and it doesn't use ferrite rod inside (pull the
rubber duck, and signal is gone.)

I don't know if this unit will be available in North America or not. Standard
web site is very slow in showing new products. I have not seen any ad.
in any North American magazines.

Since this is very new, the owner doesn't know about overall intermod
rejection performance. However, he mentioned that "big" antenna cannot
be used with this radio, since overloading will occur.

I myself was quite impressed and immediately wanted one, even though I
was aiming for something along the line of the AOR8000 type, which has
alphanumeric memory, and computer control. However, the regular size
radio makes it difficult for someone like me who is already carrying a
handheld cellular phone and a dual-band ham radio, it will make me look
like a wierdo especially in the summer when there are less clothes to hide
them. Size is very important.

It might be very possible in the future to have that scanner being
incorporated inside a handheld ham radio, not unlike the Icom 2SRA line.
I wonder if I should wait? (Since I am also interested in the new Yaesu
FT-50 dual band ham handheld as well.)

That's about all my impression so far. If you have more info than I do,
please send them my way!

Disclamer: I am in no way associated with Standard Radio or Marantz (the
parent company), besides being a rather satisfied customer of one radio.
(satisfied except lack of support and suffering high price in North America,
as if they don't care.)

<del>
: GT> It boils down to laziness, pandering and wanting all your copy to 'flow'
: GT> into the newsroom w/o anyone actually chasing down a source. If I can keep

: Either you have NO idea how the media works, or you're deliberately lying to
: provoke him. TV and radio stations do NOT report something if they've only
: heard it on a scanner (or, they don't do it more then once, when they make a
: major mistake, ala the radio news guy in the Bay area that reported on a bank
: robbery, which turned out to be a movie crew shooting a scene. He didn't
: verify, and lost his job).

Having to help Mr. News out, huh? The Voice of the Valley and the Bay Broadcaster - what a tag team! You guys cover wrestling a lot, do ya? Use that scanner to keep up with the Hulk's limo? Catch his cell calls to the steroid pusher?

You are dead wrong on your above graf. My point wasn't that they reported it (although I've seen papers publish what they call 'Fire Calls' where they publish a boxed list of every time an engine was dispatched, and I've heard radio and TV stations quoting what they're monitoring on a scanner (sometimes even with the scanner audio in the background), particularly the Ham SkyWarn traffic, although that's a legitimate use, IMO, because they're actually trying to be some public service), I said they were 'profiting' from it, which is clearly against the letter and surely the intention of the law. Mr. News has definitely proven that he's too lazy to research anything, so I guess I'll have to go find the relevant portions of the act to post, not that it'll prove anything if you're claiming a 'special exemption' from DOJ or other sugar daddies.

And when I say 'profit', I'm not necessarily referring to real-time, cash-in-the-pants stuff. What is the value to a local newspaper to hear a lawyer discussing a high-profile case with his client over a cellfone? Or to hear a banker discussing a large off-the-record loan with a local businessman? Invaluable, I'd say. Of course, even most of the media is smart enough to realize they can't just transcribe the conversation and print it, but you can bet they'll be out the next morning using that info - asking some questions that'll have that lawyer/banker questioning his/their staff about leaks. Without the scanner, reporters actually have to do some research, banish the though! BTW, if I have to explain all this obvious stuff to you, what does that say for your level of experience in an actual newsroom, Bucky?

It is funny, however, that most of the victims never seem to realize that a wireless phone actually goes out over the airwaves. We just had a local

case where a school administrator was caught being very non-PC and minority-unfriendly by being taped while talking on his 'cordless' phone. He claims he's got the FBI working on the 'wiretapping' case now.

: GT> I'm beginning to discern why you're so fanatical about this issue. From
: GT> your grammer/spelling, the fact that it takes you a week to respond, and
: GT> lack of credentials you come across like a papparazzi who depends on elint
: GT> for the tabloid rumormills. This would explain why you said 'what
: GT> copydesk', when you could so obviously use one.

: Whereas YOU'VE offered anything to show your 'credentials' to us??

Oh yeah, like I'm supposed to roll over because someone from 'Alien Biker Kat' says I'm wrong. Is that the official newsletter of the Hell's Angels? Are you a pseudonym for Hunter S. Thompson? I'm not the one claiming an exemption to the law and my monitoring isn't a 'for profit' activity. And if you'd really read my posts instead of reacting viscerally to them, you'd probably realize I've probably got more years around newsrooms than you and Mr. News combined.

Mark Twain said something to the effect that, "I'm always willing to learn, but not always willing to be taught". I'm beginning to believe Mr. News is uneducatable - you have no track record yet, but I'm not overly optimistic ...

Sorry Marg, I think I'm too late reading your mail to respond. I'm at work and have an alberta/bc directory that I picked up out there 2 years ago for a 3 month stint at one of our branch offices. You may want to pick up the same book..it was at both coles and radio shack and was about 20$. Unfortunately, I was in edmonton, so I cant help you with police in calgary. For Aircraft, try scanning betwen 118-120 using the limit search on your scanner. If you get a 1/2 hour, visit your local radio shack in Calgary. They usually have frequency books or at least a list of police/fire for their scanner purchase customers. If you venture outside of the city, remember they dont have a provincial police like our OPP here in Ontario. The RCMP covers that job and they are on VHF.

Good luck!

From: slush@VOA.GOV
Message-ID: <DpCs3w.Cx8@VOA.GOV>
Source record: 236949

Posts on the AR8000 shortage have mentioned that -- according to
EDCO [otherwise known as EEB in Vienna, VA./suburban Washington, DC]
AOR is only manufacturing 70 units each day.

I ordered an AO8000 from EEB in late February for $588, and got
the phone call last week that it had arrived: serial number 023431.

Just to make sure that this one is not somebody else's returned unit,
can anybody else compare serial numbers on units that are KNOWN to
be recently-manufactured?

Many thanks!

Joe Gallagher (slush@voa.gov)

295. Indoor Ant performs better than outdoor?

Newsgroup: rec.radio.scanner
Date: 1996-04-04 00:00:00 UTC
From: braymon@llake-fs3.isc-br.com
Message-ID: <4k1iq0$67i@cnn.isc-br.com>
Source record: 236957

I recently purchased a Radio Shack discone antenna for scanning purposes. Much to my surprise, I found that my indoor antenna worked better. I checked the cable and connectors, which are all new and even checked vswr which was essentially flat across the desired frequency range. I'm using a Bearcat BC8500XLT scanner.. I wonder if this is just an impedance mismatch? Tried using a tuner in line and the reception improved somewhat, but needed to be touched up depending upon what band I was monitoring. I am using 50 ohm cable (RG58) which is supposed to be a match for the antenna, but I can't find any specs on what the expected impedance is for the Bearcat scanner?
If it is 70 ohms then that would explain this..

Any scanner experts have ideas on what might be causing this?

298. Factory Refurbished BC2500 XLT - Are they worth the price?

Newsgroup: rec.radio.scanner
Date: 1996-04-04 00:00:00 UTC
From: eddieb@super.zippo.com
Message-ID: <316422d2.602282115@snews.zippo.com>
Source record: 236960

I have just come across a mail order catalog selling factory refurbished 2500 XLT scanners for $300.00. I don't know much about the units and was wondering a couple of things.

1. Is this a good price for a basically new 2500?

2. Are these units dual or triple conversion?

3. What is its scan/search speed?

4. What are the frequency gaps for the unit besides cellular?

5. The model number for these units is BC2500 XLT/B - What does the "B" stand for?

6. Can you pick up cellular harmonics without a modification and at what frequency range?

7. Anything else I should be aware of?

Thanks,

Eddie Beverly

> to an on glass mount or drilling holes in the roof of my car. I
> would appreciate your recommendations.

John,

I recently tried a few options for antenna's in my car. Perhaps my experience can be of use to you (and others).

The first thing I tried was a radio shack suction cup mount antenna BNC plug. It basically had two suction cups attached to a rigid piece of plastic that had a female BNC and a male BNC...I attached my telescoping whip and extended it the lenght of my rear window and ran the BNC to my scanner...this worked fine, but reception was somewhat limited given that the antenna was slanting.

I then bought a "No-Tenna" from Grove. Bzzzzzt. "No-Thanks" The idea was powerful; you screw the "No-Tenna" into a moulding screw or sun-visor screw and the metal of your whole car acts as an all band antenna.

In reality, it basically acted as a massive antenna for any electrical signals produced by my engine. This was roughly in the low 30Mhz range (my Opto Scout went insane when plugged in to the NoTenna as per the instructions).

The photocopied sheet that comes with the NoTenna does say that you may experience such problems, and that if it is excessive you should talk to your car mechanic about isolating electrical signals or whatnot.

My car is a 1995 Honda and I've not had any other electrical problems...The radio and the scout work fine on other antenna systems.

I ended up using the No-Tenna to work with my Scout, but run the cable from the Driver's side sun-visor (it recommends the passenger side...) and run it straight down, under the drivers seat, through a FM signal trap from Radio Shack (I live in the near field of a FM tower) and back up to the Scout...this seems to work fine.

For the scanner I got a magnetic mount scanner antenna from Radio Shack...I don't have the exact model number here, but it's allegedly tested at 65mph and comes with centre and lower loadings...8' cable is just long enough to make it from the boot of my car to the scanner...signal reception seems fine, only 30-50Mhz seems more direction dependent...overall I am very happy with it.

I wanted some way to use that antenna to cover the scout as well, but whenever I tried to put it in the chain of things, I got massive interference on the scanner; I think that the Ethernet T piece I was using for splitting the signal wasn't right -- It wasn't really splitting the signal so much as partially dividing, which wasn't enough.

Hope this helps in some way.

Scott

>John

All major antenna manufacturers design thier own antennas differently. Within these designs are various gain configurations. Most often the stated gain of the ant will be 0 db, 3 db and 5 db. Some ant manufactures claim thier ant's have 3dbi gain. The "i" refers to an isotropic antenna which is an ideal lossless antenna which radiates energy equally on all sides. Unfortunately, this type of ant does not exist.

You may want to look into having two ant's a 3db for city use and a 5db for fringe system use. Make sure both ant's are VERTICAL a whip with say 30 degree's off vertical could result in a loss of up to 3db.

This information will vary with freq's and TX RX information.

313. Chicago Scanner Meeting

The next meeting of the Chicago Area Radio Monitoring Association (CARMA) will be on Saturday, April 13, 12:00 noon, at the Great Escape Restaurant, 9540 Irving Park Rd. (SR 19), Schiller Park IL. No admission fee, but please buy your meal.

Talk in on 145.770

CARMA Members discuss all aspects of radio listening, bring radios and accessories for display and/or sale. CARMA Membership is not required. Also, information on the CARMA Newsletter, BBS, or Radio License Report Service is available

For more info, call the CARMA BBS at (708) 852-1292, or E-Mail to n9jig@TheRamp.net.

Hi Sean,

did you get a chance to verify the headset (input)ferquencies?

They should be as follows:

The one for 35.0200 should be 154.6000
154.5700 should be 170.2450
154.6000 should be 171.1050

Anyway here's a list of frequency pairs to check out.

FAST FOOD FREQUENCY PAIRING

CUSTOMER CLERK RESTAURANT CHAINS

30.8400 --- 151.6700 McDonald's(Canada main freq)
30.8400 --- 154.1450 McDonald's(Canada aux. freq)
30.8400 --- 154.5700 Arby's, Big Boy, Burger King, Burgerville,
Dairy Queen, Dunkin Donuts, Hardee's,
Kentucky Fried Chicken,
McDonald's, Roy Rogers, Taco Bell

31.0000 --- 170.3050 Burger King, Hardee's, Kentucky Fried Chicken,
McDonald's
33.1400 --- 151.8950 Kentucky Fried Chicken, McDonald's
33.1400 --- 170.3050 McDonald's
33.1600 --- 154.5150 Dunkin Donuts, Taco Bell
33.4000 --- 154.5400 Burger King, Dunkin Donuts, Jack in the Box,
McDonald's, Taco Bell, Wendy's
33.4000 --- 154.5700 McDonald's
35.0200 --- 151.8950 McDonald's
35.0200 --- 154.4900 McDonald's
35.0200 --- 154.6000 Kentucky Fied Chicken, McDonald's
35.1000 --- UNKNOWN G.D. Ritzy's
49.8300 --- 49.8900 Wendy's
151.7150 --- 169.4450 McDonald's
151.7450 --- UNKNOWN McDonald's (Most likely paired with 169.505,
171.045, or 171.845)
151.7750 --- 171.9050 McDonald's
154.5700 --- 170.2450 McDonald's
154.6000 --- 171.1050 McDonald's
155.0000 --- UNKNOWN McDonald's
457.5125 --- 467.7375 Wendy's
457.5250 --- 467.7500 PROBABLE FREQUENCY none found yet
457.5375 --- 461.0875 McDonald's
457.5375 --- 467.7625 Bess Eaton Donuts, Hardee's, Roy Rogers,
Wendy's
457.5375 --- 468.3875 Rally's
457.5500 --- 467.7750 Burger King, McDonald's
457.5625 --- 467.7875 Burger King
457.5750 --- 467.8000 Burger King
457.5875 --- 467.8125 Kentucky Fried Chicken
457.6000 --- 467.8250 Big Boy, Burger King, Kentucky Fried Chicken,
McDonald's, White Castle
457.6125 --- 467.8375 Wendy's
460.8875 --- 465.8875 Burger King, Dairy Queen, Hardee's,
Kentucky Fried Chicken, McDonald's, Taco Bell,
Wendy's
461.0375 --- 466.0375 McDonalds's
461.0875 --- 466.0875 Hardee's, McDonald's, Rally's, Taco Bell,
Wendy's
461.1125 --- 466.1125 Hardee's
461.5375 --- UNKNOWN Burger King, Taco Bell
461.5375 --- 462.1625 Rally's
461.8125 --- UNKNOWN Wendy's, White Castle
462.1625 --- 467.1625 McDonald's
462.7625 --- 467.8875 Kentucky Fried Chicken
463.2875 --- 468.2875 McDonalds's
464.3750 --- UNKNOWN Wendy's HQ
464.5125 --- UNKNOWN McDonald's, Wendy's
464.9625 --- 469.9625 El Mexicano, Taco Bell
468.3875 --- UNKNOWN Rally's

469.0125 --- 464.0125 Kenny Rogers Roasters Chicken, McDonald's,
Roy Rogers, Taco Bell
469.1875 --- 464.1875 McDonald's
469.9250 --- 464.9250 Roy Rogers
WFM 920.2625 --- UNKNOWN Dairy Queen
WFM 920.5000 --- 903.5000 McDonald's

One Frequency pair that you may want to check out is 469.0125. Several
Fast Food Chains have moved to that frequency in the last few months.

469.0125 (Speaker) / 464.0125 (Headset)

Taco Bell in my area use 33.4000(Speaker)/154.5400(Headset)

Hardees in my area use 30.8400(Speaker)/154.5700(Headset)

DD> I dont know about ohter areas, but the McDonald's here are changing to
DD> "Face To Face" ordering. Doesn't this defeat the purpose of using the
DD> headsets? In doing so, does these particular restaurants (using the
DD> term loosely) still use headsets in some fashion?

Where exactly are you? I'm in Los Angeles (or thereabout), and I haven't
noticed any 'face-to-face' ordering going on at any of the fowl food
restaurants.

DD> My other question is did McD's do this to avoid people listening to
DD> their conversations, or is it a marketing ploy to make ppl think they
DD> are special by personally taking their orders face-to-face?

A definite marketing ploy, or they've just gotten too cheap to maintain a
box, a speaker, and a cork board with numbers and letters on it... <sigh>
It wouldn't surprise me, though. The last couple of times I've eaten at
McDonalds was probably a few months ago, and I've noticed that they're
now so cheap that they don't even "toast" the middle bun on the big bacs
anymore... anyhow.

There are numerous ways to influence the BEEP on the Pro-2026. The signal is fed from the microprocessor to the audio section via the Control PCB Assembly (the bottom board with all the wires going to it). The beep leaves this board on Pin 5 of J4. Cutting or otherwise disconnecting this lead should knock the beep way down.

The capacitor C-173 and the resistor R152 (470k) (both in series with BEEP wire) feed the signal into the input of the audio amp that drives the speaker. Removing or lifting one leg of either of these components will also knock it way down. From previous reports, none of these totally eliminate the beep, but it is almost totally gone.

: in the late evenings/early AM. Could a ham repeater be rebroadcasting
: their transmissions?

Ok - *now* I can tell you it's unlikely that it's coming from a ham repeater 8*) The 1260-1270 segment is set aside for uplinks to and downlinks from ham satellites...

: The difference between the 1200 and 506 mhz broadcasts is that I can
: always hear the mobile unit's transmission clearly on the 1200 mhz.

Strange - when you hear a mobile on 506, *most* of the time it ought to going through the repeater. If you're consistently hearing the mobiles better on this 1200 MHz frequency then on 506, then you're probably hearing an image (or spur?) from one of their link transmitters. [Are you close to any city radio towers? 8*)]

From: emichelson@nwu.edu
Message-ID: <4jvmk6$9h3@news.acns.nwu.edu>
Source record: 237011

I found an inexpensive source for the bc2500xlt, possibly repackaged units.
Looking for opinions from owners, and answers to a few questions.

1. How to determine which models are hardware modifiable for full 800mhz
(is there a serial number or date of manufacture)

2. What is the mod?

3. Will the scanner search in 30 khz steps after the mod?

4. How is intermod on this radio? I live in a high rf environment

5. How do you like it?

6. How does it compare to the bc3000?

Feel free to reply here or directly via e.mail. Thanks

Ed

> (it probably uses the UK bandplan right?).

Replacing the IC (whichever way) will only give you full 800MHz
coverage. There are no other gains or lossses.

The "bandplan" is, afaik the same as the US one, the only difference
being that from 760-300MHz it defaults to 12.5KHz so manually changing
to 5KHz would be required.

The "Bandplan" on virtually all GRE or Uniden produced sets has always
been that of the US on those sets that do not have programmable
increment steps or modes. The current range of sets such as the the
PRO-60, PRO-62 & UBC-220XLT for example follow this pattern. Key in 152.00
and it will default to NFM, 5KHz. Not ideal when we use 12.5KHz channel
spacing in AM in some parts of the country.

Hi Sean,

> I am going to be living in the UK over the Summer and I was wondering
> if it is legal to scan in Britain? I can understand that it may be
> illegal due to security concerns, so I don't want to bring my scanner
> along if it'll be confiscated by the police! Any help is greatly
> appreciated! Thanks!

No laws/regulations regarding the ownership of any type of
scanner...just don't wave it in front of a Police person.

Whilst many would say its OK to listen as long as you don't tell anybody
this is not really the case.

The Radio Communications Agnsy information sheet on scanners states:

"No licence is required to use a radio receiver, provided it is not capable of
transmitting.
However it must be used only for receiving the transmissions meant for general reception,
such as authorised sound broadcasts; messages sent by radio amateurs and Citizens' Band
Radio and at sea, weather or navigation information."

On the reverse side on this sheet are a few "Questions & Answers"

Is a licence needed to own a scanner ?
Not if is inherently incapable of tranmissions. But its use to listen
in to private messages is an offence.

Does owning a scanner make a person liable to prosecution ?
No, but is use, except as permitted under section 5(b) of the
Wireless Telepgrphy Act would.

Is it all right to listen as long as what is overheard is not disclosed ?
No, using radio equipment to listen in, except as provided for by
Section 5(b) is an offence, regardless of whether the information is
passed on.

Could I get "authority" from the Secretary Of State to listen to the
emergency and martime and aeronatical services. I am interested in them
and wish to help ?
No, the Secretary oOf State's authority is usually reserved for
persons acting at his request and on his behalf. If you wish to
listen in to messages, you must obtain permission of the person
sending them.

Isn't this a bit heavy handed ?
No, no one likes their private conversations to be listened in to.
Parliament has passed the laws in question to protect the privacy of
radio users.

In reality just use your scanner with perhaps a little more discretion
that your maybe used to and you won't get into any trouble.

> P.S. If it is legal, does anyone have the freqs for the North Yorkshire
> pOlice in the York area?

Local Police use UHF frequencies - try searching 451-453MHz, NFM, 25KHz
steps for the local ones in use.

Local Force Control (Traffic etc) use:-

North Yorkshire (c/s XN). All in AM Mode
152.9750 / 143.3375 Channel 1
152.0625 / 143.3125 Channel 2
152.9500 / 143.2875 Channel 3
152.1500 / 143.2000 Channel 4
152.2625 / 143.3875 Channel 5

West Yorkshire (c/s XW)
152.3375 / 143.0375 Channel 1
152.7125 / 143.0625 Channel 2
152.5125 / 143.0875 Channel 3
152.5875 / 143.1125 Channel 4
152.8125 / 143.1375 Channel 5

West Yorkshire Police have a Bo 105 helicopter with the police c/s X99
that ventures out of areas sometimes (ATC callsign is Police 42)

If you want a reasonable although slightly out of date in some areas UK
guide for 25-1300MHz go to Paul Jones Web Site at URL
"http://www.waverider.co.uk/~paulj/" - If nothing else it will
give a good idea of where to search.

Hope this helps.

AFAIK Standard "USA" did have a look at the AX400 some time ago but
decided it was a no go with strong intermod etc. As to if there were
other reasons (FCC certification) I don't know. Perhaps they might
change there mind in the future.

Well it is possible to gain much information from listening to conversations. Have you never sat in a mall and listened to the people around you to hear what they talked about? What interested them? What they knew? What you could learn? I suppose it might be said that you could simply ask them, but that isn't as much fun. :) Plus when you use anything that uses airwaves you have to realize that you can be heard. :-).

>Don't you know what a kill-file is?
Maybe he doesn't...

Ron, Many newsreaders have a facility where you can add a list of keywords or phrases to a file associated with a specific newsgroup. This list will be used to skip or discard topics or threads containing those keyword and phrases. Not as good as keeping uncivilised and uncouth individuals out of the newsgroup, but its better than nothing.

In my opinion, posting topics with title like the one in question to a public newsgroup (especially one whose topic is clearly technical and hobby oriented and not controversial in nature), is the same as going to a public place like your local shopping mall and shouting those words.

I would like to see the original writer of the topic, go to the shopping mall and repeatedly shout the topic of his note and see how long his free speach rights keep him from getting arrested or booted...

The guy that asked the original question said:

"My local radio dealer has the CTE T601 for 45 Irish pds, which he says is
very good and suitable for scanners."

Since he quoted Irish pounds and his address ended in 'ie', I assumed he
was Irish, which is why I asked the question about Radio Shack being there.

And I thought maybe that CTE stood for 'Comet'. Just a (bad) guess, I
guess! And you're absolutely right with the discones I've owned not being
worth the $$$ for primary scanning or hamming. They are, however, very
compact, and if you're traveling or have a need for a wide range 'stealth'
antenna, can be hung by a string from the ceiling near a window in a
pinch.

How do I go about decoding weather data transmitted digitally on the
NOAA weather channels??? A friend of mine said that it is possible using
a packet modem such as a Kommtronics. I do not know much about this modem
but I thought that it could only be used in ham radio applications. Has
anyone ever tried interfacing this modem to a scanner for receive only
applications and if so, will it work to decode the NOAA data channel?

Here in Toronto there are several groups that are all linked. There is
the MTMAA (Metro Toronto Multiple Alarm Assc) which uses simple
commercial VHF voice pagers to announce fire calls, there is Metrowide
Firecomm, a system of UHF commercial repeaters where the members have
their own two way radios to put out calls over the air, coordinate
activities at fireground, and give updates to members who are do not
attend the scene. MW also runs several volunteer canteen trucks for the
metro area fire depts. And there is a spinoff version of Metrowide called
Firenet or Firepage, which is the same info as on metrowide, put paged
out over alphanumeric pagers. Mw is based on a similar system in Chicago
called Citywide (I think). I've also heard of an alphanumeric pager net
in NYC called Breaking News Network which reports on anything (fires,
accidents, homicides, etc).

: Just a thought...

: Dave

Heya Dave, this face-to-face is purely a markerting tool and also to make
sure they get your order right. Obviously it's easier to mess up listen
ing than if you're talking face-face(or so they say). They aren't by far
getting rid of the headsets though - The person taking the order still has
to communicate special requests to the person assembleing the order. The
computer there does not facilitate every possible order'able item. ie a
complimentary glass of water does not show up on the screens.

I assume that's the freqency for the Speaker (457.5500). Can you confirm
the Headset freqency? It should be on 467.7750

The 457.xxxx and 467.xxxx are paired as follows:

CUSTOMER CLERK RESTAURANT CHAINS

457.5125 --- 467.7375 Wendy's
457.5250 --- 467.7500 PROBABLE FREQUENCY none found yet
457.5375 --- 461.0875 McDonald's
457.5375 --- 467.7625 Bess Eaton Donuts, Hardee's, Roy Rogers,
Wendy's
457.5375 --- 468.3875 Rally's
457.5500 --- 467.7750 Burger King, McDonald's
457.5625 --- 467.7875 Burger King
457.5750 --- 467.8000 Burger King
457.5875 --- 467.8125 Kentucky Fried Chicken
457.6000 --- 467.8250 Big Boy, Burger King, Kentucky Fried Chicken,
McDonald's, White Castle
457.6125 --- 467.8375 Wendy's

>grh

Mainly I go in for the bits and pieces I need from a small parts bin
since theyre not worth driving 50 miles to my nearest large parts bin
or paying $5 S&H for a $2 part.

The reason RS is still in business is that they are in virtually evry
mall or town (kinda the Mcdonalds of electronics) and there are ALOT
of people with no clue about electronics in the world who trust them.
(they're in the business ya know.. they must know what they're talking
about).
The sad part of this chain is that their employees by and large know
less than the customers, but they do know the RS catalog!

From: ham@w3eax.umd.edu
Message-ID: <4k0sv8$dhc@cville-srv.wam.umd.edu>
Source record: 237035
Cross-posted to: rec.radio.swap,rec.radio.scanner,dc.forsale.misc,misc.forsale.non-computer,um.forsale,balt.forsale

For sale: One Radio Shack Pro-2026 scanner, unblocked via L201 modification.

Purchased in December 1995, date code from 1993 (don't have it in front of me). Works 100% perfectly, looks new. Used briefly. With box, manual, mobile bracket and power cord.

Will include receipt for warranty purposes. I bought a BC-8500XLT and don't care about the cell freq's, so the 8500 is more suited to my needs.

100 memories, covers 29-54, 108-136. 136-174, 400-512 (?), and 800-956 MHz.

Yes, Radio Shack has them on sale for $150 plus tax. Looking for $160 plus shipping - save yourself the effort of finding a modifiable one.

thanks!

>requirements ever being mentioned to the potential customer.

Good point. I was in RS one time when an older couple asked the salesman
for a radio communications system which they could use for personal communications
(i.e. non-commercial). He was in the process of selling them some VHF
business radios (the "dot" or "star" frequencies) when I left. Personally,
I thought that the GMRS radios would have been more appropriate.

I believe the RS sales force plays the role of applications engineers rather
frequently ("My TV gets trash whenever I turn my computer on, help me
fix this problem"). Unfortunately being an app's engineer frequently
requires more knowledge than an RS salesperson is going to be paid
for... One of the unfortunate paradoxes in life.

365. Newton and Scanner (as in radio scanning)

Newsgroup: rec.radio.scanner
Date: 1996-04-05 00:00:00 UTC
From: cmarcant@netcom.com
Message-ID: <cmarcant-0504960831190001@192.0.2.3>
Source record: 236843
Cross-posted to: rec.radio.scanner,comp.sys.newton.misc,comp.sys.newton.programmer

Does anybody know of a Newton-based scanning frequency database?
Ultimately, it could also be use to control a scanner (like the AR8000)
over its serial port.

This combination would be way handier than taking your laptop with you
whenever you feel like scanning outdoor.

The main issue, I suppose, is not the difficulty to implement such a
facility but rather the number of potential users/customers: who owns (or
would be willing to) own both a Newton and a PC-controllable scanner were
that facility available?

Imagine the configuration: you are travelling, something happens, you look
up the proper frequencies (local PD, etc...) in your Newton database,
download them to your scanner, and here you go. Both devices being small
can always carried around.

Any comments?

Christophe

First of all, how on earth did you test your VSWR? Second, why are you worried about impedance if the VSWR is low? Pretty much all scanners have 50ohm impedance connectors.

If you missed it, get 'Full-Duplexed' Transmit and Recive Speech Descrambler kit. Works on phones if you buy two. Decode voice inversion transmissions with the RK-SS7. $39.95

Now most won't require the Transmitt and Receive feature of this kit, but you may want to experiment with your own scrambled audio/transmissions.

IMHO, this kit is recommended for the advanced rookie.

xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx

Michael,

I think you may want to take a second look? Channel 3 is 60~66MHz.
66.9MHz is almost one megahertz away. Modern military receivers will have
no problem with channel 3 at all, in fact, channel 3 is not used everywhere
in the nation so it is really non-issue.

126.2MHz (Tower), 140.4 (air-to-air) and 141.85MHz (Air Coordination),
are all within the range of your scanner, but considering the list above, I
don't beleive you were hearing the 'whole show'.

I once had a 'surplus', VHF, very low power, solid-state repeater. It was
used at a local air base by security on the 'line'? It had USAF tags on it
but the strange thing was the unstandard channel split AND that it was

BETWEEN two known military frequencies! I wrote the frequencies down somewhere... I did manage to power the repeater up but I was never able to actually get it to repeat audio, as we know it. I gave it back because I suspected that it may have been 'liberated'? There was no schematic, loads of IC's and what appeared to be a CPU? Too weird. (aprox. 1989).

BTW, the sources of my Thunder Bird list of frequencies are:

"FEDERAL FREQUENCY ASSIGNMENTS" Artsci Inc.

"POLICE CALL 1996" Gene Hughes, about $13.
(the Pink cover, the BETTER one. NOT Radio Shack... there IS a difference)!

I hope this helps clear-up matters?

Uncle T.

Good question, Brian.
Here's *my* stab at an answer...
Since it's illegal to listen, the authorities obviously are not
expecting any help from you via this route, so there would seem to
be no moral requirement for you to do anything about it. Especially
as they could still prosecute you for breaking the law.
I'd just sit there, fat dumb & happy.
But that's *my* opinion.

oooooooooooooooooooooooooooooooooooooooooooooooooo

hh,

1. Can I ask what you are using to measure your frequency?

2. *All* frequencies checked in LAPD data end with a "5" or "0".
This includes the new 800MHz listings.

3. I suppose there could be a special federal agency/task-force that
loans 'special' radios for specific bust(s)? Anything goes then,
feds can use ALMOST any frequency they please for short-time use.

***Can I ask the specific frequency? That may help localize the signal?

If you look for a small circuit board at the botom right hand side, there should be a jumper L201. Remove or cut it.

This will give you 806-956Mhz at 30 khz steps for the cell band.

Anyone interested in central North Carolina frequencies (Raleigh, Durham,
Research Triangle Park and those within about a 60 mile radius), the
latest version of the Triangle frequency list is available on the
Raleigh Amateur Radio Society (RARS) BBS at 919-779-7277. (779-RARS).
It's called TRIFREQ6.ZIP and is in both ASCII and database formats.

Yes, AOR's are GREAT receivers but IMHO they SUCK as scanners. I had an AOR1000XLT and though it received 800 MHz better than anything, it wouldn't hear worth a darn on 42 MHz which I need for CHP. Too many channels, 1000 channels is totally unmanageable especially in banks of 100 channels each.

Save yourself a LOT of $$$ and get a Uniden/Bearcat BC3000XLT. 400 channels are MORE than enough, plus this radio will let you plug in STEREO headphones! The ONLY drawback is that you're stuck with their NiCd pack and can't use standard AA alkalines as you can with the AOR and RS units.

OK, so the AOR can also hear down into the shortwave frequencies, but you won't hear ANYTHING with your rubber duckie. You'll have to hook it up to a longwire or a base scanner antenna to hear anything down that low.

Trust me, go with the BC3000. You WON'T be sorry.

388. Re: bc2500xlt opinions

Regarding #6, the BC3000 is a better unit, receiver-wise, though the difference isn't that much. The major difference that I can see is that on the 2500 you have a tuning knob on top which was eliminated on the 3000. Don't know why, it was a nice feature.

: to them any more because the freqs is digital can anyone please give me
: some info on whether or not this is true and whether I can be able to
: listen to them.

iIn case you haven't already noticed, Dade County has already begun the changeover. Cutler Ridge, Hammocks, & Kendall have already switched over to the 800 system and stopped broadcasting on their vhf freqs.. South Miami & Florida City have switched over to the system too. Yes, the system will have some digital transmissions as well as some analog transmissions for now, later it may well be all digital. During April the north end of the county
will switch over to the system (just today they were testing on the Intercoastal channel), and then the ems, medcom, and fire dept will switch over
in May. The Fire dept will have 11 tactical channels plus their dispatch channels, etc.

When they transmitt in digital mode, you will hear only static on your scanner, no voice..

>hams and experimenters keep going in.

As it was pointed out, it's just about the only game in town for those quick
little emergencies, and people that don't know any better believe the ads.
I always feel slightly ill when I have to go to one.

My experience with them started at an early age. Back in the '60's, they
were just as bad. Used to sell bags of components marked 'untested'. Funny,
NONE of them ever worked.

It was a dark day when RS bought Allied Electronics and immediately trashed
it. Allied was pretty much the mail-order source for everything the hobbyist
wanted.

We used to get RS catalogs and look at the specs on their 'hi-fidelity'
audio junk. It was good for a real chuckle. Things like THD of 10%. Yep,
that's ten percent, not 0.1%. However, most people that would buy audio
equipment from RS wouldn't know THD from an LP, a fact that RS depends
upon.

Fortunately, there are now several good mail-order suppliers around,
like DigiKey. So, RS is for those weekend days when you just have to have
a 7905. Chances are about 50% you can find one at RS, and it will probably
even work for a while. I usually replace any critical components that I
get at RS ASAP with ones that come from someone that sells them with
the manufacturer's branding on them.

This is a great thread. Keep it up. Just think of all of the thousands
of people out there who have all of this repressed anger at RS that can
achieve catharsis now!

Source record: 236913
Cross-posted to: rec.radio.scanner,

First Thing,As far as impedance goes,IT DOESN"T MAKE ANY DIFFERENCE!If you were transmitting,it would,but it won't matter on a scanner.Second thing,get rid of the RG58.It's so lossy above 150 mhz,it loses all the signal you put into it if you run any length at all.this probably explains why the indoor ant. works better than the outdoor ant. does.More coax = More loss.Coax like 9913 (or better)is ideal,but expensive and a pain to work with.Just use DECENT RG6,like you hook up a tv with,it's cheap and works well,after all it's made for UHF tv signals.Just remember,get the good RG6,not the junky stuff.The Radio Shack stuff on a roll (the stuff marked Sattelite or SAT is pretty good.They have tha adaptors you will needGet rid of the tuner..good Luck!.

>Anybody want to give their opinion about the best Hand Held
>Scanner to buy -- I am looking for an new one!

I recommend the Uniden/Bearcat BC3000XLT. The AOR AR8000
is no slouch, either. There is a sizeable cost difference between
the two models.

The AR8000 has more channels, two VFOs, wider frequency coverage,
alpha display, optional speech inversion descrambler, and an optional
computer interface. The AR8000 has a lower modulation acceptance,
so NFM signals with higher deviation can close the squelch on
voice peaks.

For some quantitative AR8000 date, see the Scanner Equipment
column in Monitoring Times, November 1995.

The BC3000XLT is faster, consumes less current, and is far simpler
to operate. It has excellent immunity to intermod and images,
and provides crisp audio. The speedy Auto Store feature is a work of
art. It lacks a tuning knob and supports only one search range.

From the FAQ:

BC3000XLT (Uniden): 1995 vintage. Excellent 400 channel
portable with 20 banks. Up conversion. Very fast scan,
search, and intelligent Auto Store. Mode, attenuator, and
delay settings programmable for each channel. 50
frequencies can be locked out during search. Larger
speaker than PRO-26 produces better, crisper audio. See
"The Uniden Bearcat BC3000XLT," by Bob Parnass, AJ9S, in
Monitoring Times, April 1995 and "The Radio Shack PRO-26
vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in
Monitoring Times, August 1995.

Note: Reprints of Monitoring Times articles are available

Chicago Area Radio Monitoring Association

"The Premier Organization for the Radio Monitoring Hobbyist"

The next official meeting of CARMA will be held...

When: Saturday, April 13, 1996
12:00pm Lunch (purchase is required)
1:00pm Meeting

Where: The Great Escape Restaurant
9540 Irving Park Road
Schiller Park, IL

(between 25th Avenue and River Road)

Everyone is welcome to attend and beginners are especially
encouraged.
Questions and discussions include Fire/Medical Services, ESDA, Law
Enforcement, Federal agencies, Aircraft, Shortwave and the latest in
monitoring equipment and accessories.

Everyone is welcome to bring information they would like to
contribute in
the form of handouts. At least 75 copies should be made to ensure
everyone
gets a copy.

If you have any scanning or computer equipment you would like to
sell,
please bring them along.

CARMA has a newsletter available via subscription. Contact the
E-mail
address below for more information.

CARMA also has a BBS that is available via subscription where
information
and questions are shared between meetings. Dial in at 708-852-1292.
```

8-N-1
and up to 28.8k access. BBS subscription info available on-line.

I think that the frequencies you have for air-to-air are wrong. The
last time I took a scanner to an airshow, I was able to pick their
air-to-air conversations on the 108-174 range. In particular, at one
Thunderbird show, the solo was flying down the flight line, rolling
his aircraft going doo-dee-doo-dee-doo.

Morning everyone,
A friend just lent me his radio. He hasn't used it in
years and wasn't sure if it worked. I told him I would try and get it
working for him. Well, I got it working, but have no idea how to use it
(well, I know how to use it, but not all the features). It has a DTMF
keypad on it (for what I don't know). How can I tell if it is
transmitting? I don't have my Ham licence yet so I don't want to key it
up. Anyone have one of these radio's and can offer any advice ?

Thanks alot
Chris Valliant

>any ideas where to look, for a download? Thanks - Debi

^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^
Debi,

Are you asking about a 'Document' scanner or 'Radio' scanner?

The Newsgroup you posted to is dedicated to the radio type scanners ;)

Not a problem... much depends on the type of file your screen saver wants to 'see'. One can scan a document, picture and in some cases, a series of pictures and convert them to the file format your screen-saver wants to see... not a big deal, however...

The object of a true 'screen-saver' is to CHANGE the information on the screen so no image is allowed to stay on the screen long enough to 'burn' itself on to the sensitive display surface INSIDE the picture tube! Hence, if the same screen IMAGE/PICTURE is allowed to stay on the screen for EXTENDED length of time(s), it is not a true 'screen saver' at all.

In example, if a fixed TV camera 'sees' the same lobby, poolside or fixed image, that very image will burn itself into the camera eye tube. Move the camera months later and the damage is done. The higher the light level, the sooner the damage. The burn and damage IS permanent.

Hope this helps!

Uncle T.

>of the group latel;y???

I didn't write the part about the 11 year old.

The message was posted in ALT.RADIO.SCANNERS also and, I think the person who cross posted his reply to ALT.PIRATE.RADIO may have done so by mistake, I did the same thing.

I didn't respond to your mail, because there was little to respond to. I received a couple other mail messages from other folks who disagreed with me, the others had points worthy of discussion and I responded to them. While we disagreed we had mature and rational discourse on the topic, and in one case some useful and freindly interaction on another topic.

I'm only responding to your silly sarcasm here, because when I didn't respond to the mail that you sent me, you had the bad tast to push the issue and repost what you sent me in private to this public forumn.

>Was Internet your first contact with the REAL world???

I have had lots of contact with the real world, and the internet is not it. Sad that you think it's the real world. The tone and style of your messages suggests to me that you need more real world face to face interaction with people.

This comment really hits on a point that is worth thinking about. It's absolutely true that the same old tired questions keep coming up. I mean, come on, how much longer is the "is it legal to listen to cordless" debate going to go? An how many more times is someone going to ask if the PRO51 can receive cellular? What's needed is a FAQ. Someone care to volunteer (it ain't me babe).

The Dismond DJ130 is an excellent chioce for scanning. Of all
stainless-steel constuction, it's very rugged and can be used for
transmitting anywhere between
50 and 1300 MHz. It's also excellent for scanner reception, but make sure
to use
the best 50-ohm coax you can afford.

I have a six month old Bearcat BC120XLT scanner for sale. It has 10 banks of 10 programmable channels (100 total channels). 11 Bands (including AIR but no 800MHz). It has search mode, priority scanning, data transmission bypass, lighted display, and uses internal rechargeable battery pack (AC adapter/charger included). In very good shape with only a few minor scratches on the case. Manual, frequency guide and original box included. $75 including shipping.

bug69@aol.com (Bug69) wrote:

>COULD SOME ONE HELP ME WITH THE FREQ.FOR HAM RADIO.IT HELPS WHEN BAD
>WEATHER MOVES IN. THANKS!!!!!!!!!!

Tarrant county Skywarn operates on 146.940 MHz during severe weather.

Since weather moves in from the west, you might, if you have an antenna up high enough to allow you to receive them, try the following frequencies for the Skywarn operations around Tarrant county:

Parker County 147.040 West of Ft. Worth
Wise County 145.390 Northwest of Ft. Worth
Hood County 147.080 Southwest of Ft. Worth
Denton County 146.920 North of Ft. Worth
Johnson County 145.490 South of Ft. Worth

And after the storms move over into Dallas, give these a try:

Dallas City/County 146.880
Irving 146.720

If you don't already have one, get a Mapsco that covers the county in which you live. Spotters in Tarrant and Dallas counties refer to Mapso grids when spotting, so you'll have a better idea of where the action is if you have one.

Good listening. Hopefully we'll have a calm storm season & there won't be much to listen to. I'm in Dallas county, and during that last storm that came through a Sunday or two ago, both cars got hit by hail. Not much fun.

While we don't use CAD here, we do use Mobile Data Terminals that are
capable of CAD if fully implemented. The MDT's use a packet protocol that
is incrypted and one is not likely to decode it.

I am going on a trip from Boston Mass. To Washington DC. If anyone could help, I need frequencies (Including Ham Repeaters) for this trip so I don't go out of my mind. E-Mail to brtl@shore.net. I could use the help.
Thanks.

The Diamond D130 discone antenna is the same as the one sold from Icom except that the Icom had N connectors (lucky stiff that buys this model). Very high quality and a good solid performer. This antenna also has the verticle element extending and improving low frequency reception. The radio Shack discone does not have this verticle element so in my book has poorer reception (I had this too at one time and upgraded to the Diamond model, in fact I have two). It makes a very acceptable broad band scanner antenna. I know nothing about transmitting on this except what is written by the manufacturer. I would not think that this would make a good CB tranmitter; get a CB base antenna. They are cheap enough and will serve well.

FYI The Radio Shack discone was a real pain. Despite Loctite on the nuts, it literally disassembled itself on my suburban roof and was a real diasaster. I was not impressed. For my applications, I substituted a 2 meter Cushcraft ham antenna and two Diamond brand discones.

Hope this helps.

Actually, it's the main dispatch frequency for the Bellevue PD (for the moment).
They are currently simulcasting on this freq and on some 800 MHz trunking freqs
that they are in the process of bringing up.

Don

430. Looking For Fast Food Frequencies in Chesterfield County / Richmond, Virginia

Newsgroup: rec.radio.scanner
Date: 1996-04-05 00:00:00 UTC
From: dingram@richmond.infi.net
Message-ID: <4k1snl$6b5@nw002.infi.net>
Source record: 236985

I am looking for fast food frequencies for the areas of Richmond and Chesterfield County, Virginia (particulary in Chesterfield County Virginia)
I have 3 frequencies for 3 McDonald's that I will share with those who live in the Chesterfield areas of Hull Street Road / Hwy360

McDonald's at Brandermill and Hull Street Road (near both of the 288 North and South exits. 35.020 MHz

McDonald's at Rockwood Square Shopping Center: 154.570

McDonald's on Hull Street near the YMCA ("isn't it Ironic?") and 360 West Shopping Center which is across from the Manchester Middle School. 154.600

Anyway I am looking for others like Taco Bell and Wendy's and Hardees and Burger King and Arby's
Thank You.
Sean in Amelia County, Virginia 23002

Hold it!

IC's are not a bad thing, they are good! In fact, they are outstanding. In example, it is not unusual for one IC to have thirty (and many more) transistors inside it's little body. Can you imagine hand-wiring thirty transistors with associated support parts (bias, coupling, etc)!? Good luck! IC's do just that, but better yet, all of the transistors and circuts inside are optimized for best electronic performance.

Would you like to trouble-shoot your thirty transistor equivlent of the IC? How about a one-thousand transistor circuit? I don't think so. Can you imagine your computer without IC's?!

But there are even more benifits! Price the cost of those thirty transistors (and again, this number is very conservative) and associated support parts? Compare the cost for one IC and scocket. Classically, the IC will demand much less power. For battery power, this is a blessing. Heat is another issue. Thirty transistors will demand more current. And how about size?

Lastly, consider modern quality receivers and scanners. Imagine the cost and SIZE of that receiver if no IC's could be used?! Whoooboy! You would find a much larger, less dependable hot-box and I would venture to say that it would be less reliable too! Better beef-up that power supply while you are at it.

Working for a satelitte lab some years ago, we needed a voltage and current regulator at very tight specifications. The test board got larger and larger. While the board finally worked on the bench, as we placed it in a temp. chamber, the darn thing got more and more unstable as we took the board thru temp. limits. We had to find the sections that became unstable with temp!

Almost two months of intensive lab work and re-work finally yeilded a current monster (very bad for sat. work) with many, many parts! It would work but our regulator became very expensive, not only in certified parts cost but power demands just to run the darn thing. The main supply was batteries charged with solar panels. What worried us most was dependability.

Then someone recommended a three-legged voltage regulator. Input, Output and Ground. It looks just like one power transistor! We mounted it in a much smaller gold-plated chassis, added two little capacitors and a two wires, in and out.

We put the cover on and took our 'new' regulator to the temp. chamber where it passed with flying colors and surpassed specifications. We just could not kill that regulator (short of making the box so hot that it would melt the solder junctions)! It used 5% of power that our original regulator did. The cost of the regulator and caps. was about $7.00, not including the box!

This regulator is in fact, a I.C. and the above clearly proves my point.

Yep, they are out there called a VOX (voice operated relay) or Voice
Squelch... slow start-up time (with the tape motor) can be a problem,
where one will miss the first few words...

Found it: "Voice Activated Switch" KIT DK-13, yours for $7.95. Please
note that this kit apparently has no relay, so you will have to experement
with the PTT switch and the board... if it won't work, swap the two wires
to the board. Has adjustable sensitivity and a six second hold-on time
(perfect).

The RK-VS1 KIT apparently has the same functons as above with no mention
of hold-on timer feature. $7.95

Both kits are easy and great for nubies.

Cross-posted to: rec.radio.scanner,alt.radio.scanner

Now you can run your own FM Radio Station and re-transmitt your Scanner Audio up to 1/4 mile away (the catalog says up to 1/2 mile)! Set on any frequency from 80~110MHz, FM.

Now you can E-X-T-E-N-D your listening pleasure and range of your Scanner with this cool add-on kit! Listen with a Walkman, or thru your home FM Stereo Receiver. How about other car radios in the area? How about that FM radio in your shop or garage?

RK-FM4 = Single channel FM Transmitter $15.95. One channel Audio Input.

RK-FM10 = STEREO Transmitter, GREAT where Audio from TWO scanners (or a ham radio and scanner) can be sent at the same time on one Transmitter! Adjustable ballance control ; over 30db separation. $34.95

Both kits require 3~12 Volts DC (12 Volts is best). IMHO, these KITS are for the advanced rookie. *Be SURE and ask for the great new catalog due in two weeks.

I am not a employee nor do I receive any compensation for the information posted herein. I post with a sincere desire to improve the knowledge base of the newsgroups and it's members.

Rick as with any wire who's direct path is disturbed ie:splitting the cable for routing to another location, it creates a loss. Although lucky for you the losses for receiving via scanner are minimal and you should notice no appreciable loss in signal quality by splicing or splitting the cable. If cost of another antenna etc and the labor of installation were of no concern it would be ideal. On the other hand if you were transmitting a signal this would cause problems. Split it and enjoy. Happy listening. Cost/labor vs. benifits of an additional installation are not there.

George (MAC):

If some "voice" pagers fall in that band, then you're not supposed to listen.
Just keep your volume control down, so the scanner police don't hear you listening
when they drive by your house! :)

There are no current laws regarding intercepting alpha/numeric pager signals...yet.
You can get a simple device that plugs in the audio/earphone jack of your scanner,
and the RS232 serial port of your computer. Tune in a pager frequency, then list
all the alpha/numeric messages on your screen, to a file, or your printer! Works
great, gets interesting!

>This combination would be way handier than taking your laptop with you
>whenever you feel like scanning outdoor.

True, I would like to be able to do this as well. I have a scanner,
PowerBook and a Newton. I have yet to write the software because I didn't
think that anyone else would want it besides me.

>The main issue, I suppose, is not the difficulty to implement such a
>facility but rather the number of potential users/customers: who owns (or
>would be willing to) own both a Newton and a PC-controllable scanner were
>that facility available?

This is the major drawback of Newton development. There really are not many
Newton users out there. And fewer who even know what a scanner is. If you
hear otherwise, let me know. I have all of the development software for
Newton and Macintosh.

>
>**My question** Does the ECPA really forbid this?

Yes the ECPA does forbid monitoring the media frequencys.
However,us broadcasters don't know how that was included in the law.

My station encourages people with scanners to listen to our frequencys since they hear stuff we might miss. As far as the competition listening....well if they are stupid enough to believe everything on our 2-way...too bad.

A few bogus call each year keep them in check!

Besides cellphones...we also operate on various "descrete" channels from 26mhz to 2.1ghz

Radio Shack PRO-43 Modifications FAQ
< Last modified March 8, 1996>

CONTENTS

1. Introduction
2. Which units can be modified for extended frequency
reception?
3. Companies that will modify the PRO-43 for extended
frequency reception
4. The modifications
extended receive 800 MHz (original mod + solderless)
* extended receive 6-1000MHz
keypad beep delete
improved audio
attaching an S-meter
400 memory channels
extended receive (30-68MHz for European model)

---

1. Introduction

As long as there is a continuing demand for it, this mini-FAQ
about PRO-43 modifications will be posted every month or so.
In large part, it is the file PRO43.MOD from
pub/hamradio/mods/tandy at oak.oakland.edu .

The FAQ now includes mods for

(1) extended receive (800 MHz:
original mod + solderless)
(2) keypad beep delete
(3) improved audio
(4) attaching an S-meter
(5) extended receive (30-68 MHz for European model)

There is also a mod for 400 memory channels, but, to quote
its author, it is very complicated, should only be attempted
by someone with moderate to advanced electronics experience,
and is not for the faint of heart or the "weekend technician."
A brief description is included at the end of this FAQ. If
the mod were included in its entirety, the size of the FAQ
would be increased four-fold.

---

2. Which units can be modified for extended frequency
(800 MHZ) reception?

Note: In the United States, it is against the law (Electronics Communications Privacy Act of 1987, public law 99-508, amended 1994 by public law 103-414) to listen to cellular or cordless telephone communications. However, it is not illegal to own equipment that can receive or can be modified to receive such communications, even though it became illegal as of April 1994 to manufacture or import equipment that could be easily modified by the user to receive cellular communications. Equipment manufactured before the cutoff date can continue to be sold until stocks are exhausted. While businesses are forbidden from importing cellular capable scanners for resale, the question has been raised whether an individual can legally import such equipment not intended for resale. The issue is not explored here.

Which PRO-43 units can be modified for extended receive?
The best information is that units sold in the US and Canada can be identified by the following scheme

Modifiable | Nonmodifiable
|
serial number no A in # | begins with A
FCC-ID AA020-300 | AA020-300A

There have been rumors that the correspondence between serial number and FCC-ID may not be perfect, that is, there may be some units judged modifiable by the serial number and nonmodifiable by the FCC-ID, and vice-versa. Anyone with a such a unit should send a message to gdallal@world.std.com so that the information can be incorporated into this FAQ.

Date codes: Inside the battery compartment is a paper label containing the date of manufacture in the form "month A year". For example, 5A3 is May, 1993. The cutoff date after which units could no longer be modifiable is April, 1994 (4A4). So far, the earliest reported date of manufacture of a nonmodifiable unit is 3A4 (March, 1994). There have been *no* reports of a modifiable US 3A4 unit. However, there have been reports of a modifiable Canadian 10A4 unit; it did not have an A in the serial number.

Until the rumors surrounding imperfect correspondence between serial number and FCC-ID can be settled, it is better to check the FCC-ID. But be careful. All units have A's in the FCC-ID. Only nonmodifiable units have an FCC-ID that ends in A.

THE PRESENCE OR ABSENCE OF A FINAL 'A' IN THE FCC-ID
IS A DEFINITIVE WAY OF DETERMINING WHETHER A PRO-43
CAN BE MODIFIED FOR EXTENDED FREQUENCY RECEPTION.
IF THE FCC-ID IS 'AA020-300', THE UNIT IS MODIFIABLE.
IF THE FCC-ID IS 'AA020-300A', THE UNIT IS NOT MODIFIABLE.

It has been reported that some units currently being made for sale overseas can be modified for extended 800 MHz reception. However, it is not known whether this applies to all overseas units or, if not, whether there is a way to distinguish modifiable units from nonmodifiable units.

The PRO-43 was produced under two brand names. My 3A3 unit carries the Realistic name; my 12A3 unit carries the Radio Shack name. At the moment, it is not known whether this represented a changeover or whether both types were produced side-by-side for a time. It is also not known whether their electronics are different.

There are no software modifications for the PRO-43. It is not possible to extend the frequency range of the radio by pushing buttons on the keypad. Such modifications are possible with other models, such as the PRO-51, but *not* with the PRO-43. The PRO-43, made by GRE (General Radio Electronics) of Japan, is one of Radio Shack's few triple conversion units. Radio Shack scanners with software mods are double conversion units made by Uniden.

Modification procedures for other radios are available by anonymous ftp from the pub/hamradio/mods/<manufacturer> subdirectories at oak.oakland.edu.

There is some debate about whether step (5) of the extended receive modification is worthwhile. According to Bob Parnass, from his "Improved Audio Mod", below:

"Now that I have a schematic, I see that the European version of the PRO-43 has different coils and capacitors in the low (mid) band front end filter. That explains why the 75 MHz sensitivity isn't stellar after adding diode D3 to enable 30-88 MHz coverage."

So, if you trash the diode in step 4 or want to quit while your ahead, don't lose sleep over it. On the other hand, quoting ray_reese@tscnet.eskimo.com (Ray Reese),

When I purchased my PRO-43 and did the mod for adding 54-88 Mhz, using the removed cell. diode, I wanted to be able to listen to the sound carrier for the tv channels 2-6 as well as the 72-76 Mhz band. It is worth the trouble to make the mode and it does work well in my area, despite not having the correct coils for that band area. Do the mod anyway, but [if you've trashed your original diode], use a 1N4148 fast-switching diode. Perhaps a 1N914 might do the job also. They can be found at Radio Shack for a cheap price.

---

3. Companies that will modify the PRO-43 for extended

frequency reception

If you'd rather not do the modification for extended frequency reception yourself, Cellular Security Group, 106 Western Avenue, Essex, MA 01929 (508/768-7486) will do it for $40, which includes insured UPS return postage. However, CSG will not move the diode to extend the low band to 88 MHz; they only remove the diode to unlock the 800 MHz frequencies. When CSG is mentioned on the net, two types of comments follow: testimonials from satisfied customers and comments from those with the technical skills claiming that the service seems high priced for just removing the diode. But, there have been *no* reports of shoddy work or damaged radios. (They've modified two of mine.) Units are processed within 24 hours of receipt.

Grove Enterprises' newly advertised Repair Service will perform the mod for $40 plus shipping. They will move (rather than just remove) the diode in units that can benefit from it, but state that there is no way to tell whether the diode should be moved without looking inside. They claim that the determination can not be made from the serial number, FCC-ID, or date of manufacture. For further details, call Grove at 704/837-7081. In order to get a unit modified, a service order number must be obtained from the same telephone number. Packages without a SO# will be refused.

---

4. The modifications

From: armille@afterlife.ncsc.mil (A. Ray Miller)
Summary: cellular (870-890 MHz) and low band (51-88 MHz) restoration for PRO-43

A few people have mentioned the cellular mod for the PRO-43; it turns out you should not remove but MOVE the diode. Doing so allows cellular coverage as well as low band (up to 88 MHz) coverage.

Acknowledgments to Grove Enterprises; this information came from them. They are selling the PRO-43 for $300 which is $50 less than Radio Shack. I have no connection with them other than as a satisfied customer.

PRO-43
Cellular Frequency Restoration and Low Band Expansion

Note: It is not lawful to monitor cellular or conventional mobile telephone conversations.

The following procedure requires familiarity with microcircuit soldering and will violate your warranty. Grove Enterprises assumes no liability resulting from its attempt, nor will accept the modified scanner for return under any condition.

TOOLS NEEDED: Fine point, low power soldering pencil; solder wick or a desoldering tool; pointed awl, hemostats or pointed tweezers; small Philips screwdriver; solder.

1) Remove the battery, antenna and back cover (held in place by four screws).

2) Remove the six screws holding the top circuit board in place. Carefully unsolder the two antenna connections from the board. Bend the antenna ground tab fully up from the board. Carefully lift the board, unplugging the black connector at its base, and lay the board out of the way on its bundle of colored wires.

3) Remove the two screws from the next board and lift it, carefully unplugging the white connector at the bottom of the board. Lift it up and lay it aside on its brown wire (which can be unplugged if necessary).

4) Unsolder and remove the metal shield from the final board, revealing the microprocessor; note the row of diodes labeled D1-D5 above it. Only diodes D1, D2, and D4 are present; assisted by a pointed tool, unsolder and remove D4, the lone diode (this restores cellular frequencies which will be searched in 30 kHz steps).

5) Resolder the removed diode carefully into position D3 to extend low band coverage to 88 MHz.

6) Reassemble the boards, paying particular attention to the alignment of the plugs. Test the radio by entering any frequency between 870 and 890 MHz (cellular) and 51-88 MHz (low band).

From: IN%"savage@dg-rtp.dg.com" 2-FEB-1995 17:55:07.31

BTW, I did something similar [to the mod that follows] but MUCH easier... No soldering, removing antennas, PCBs, etc..

Just open up the Pro 43 and look down on the bottom PCB from where the batteries usually lie. You'll see the diodes there. Simply take an xacto knife and and break the solder on the D4 diode (left-most on mine) on the side facing you. I just cut back-and-forth for a bit. Once the solder (it's surface mounted) is weak enough, I just bend up the diode a bit from the PCB. Presto. I left mine hanging on the one side with solder. If you continue to work it a bit, you can probably remove the whole diode.

--Ed

From: springel@umich.edu (Jason G. Springel)
Subject: MODing a Pro-43 without soldering

I just purchased a new Pro-43 to replace my Uniden 200XLT after reading many of the praises for the Pro-43 on this newsgroup. I decided to try and MOD it, but don't have a lot of experience with a soldering iron. After examining the scanner's innards, I found it was quite easy to "fix" with nothing more than a minature philips screwdriver and some small needlenose pliars.

********** Standard Discalimer from other MODs:

1-It is against the law to monitor cellular or mobile telephone calls.

*****2-Procedures outlined below [DO NOT] require knowledge of
microcircuits, soldering and assembly techniques.

*****3-You will [NOT] need a low-wattage soldering iron, solder and
other various tools to help in the procedure.

4-The following procedure will void your warranty.

****
Here is my new MOD:

Step 1

Remove the battery, antenna, and back cover which is held in place by
four screws. Place the scanner keypad-side down on your working surface.

Step 2

Remove the six screws holding the top circuit board in place.

Step 3

Using a VERY small screwdriver (I used one from a Radio Shack kit),
remove the two screws from the lower circuit board. Looking down at
the unit, you will see that the screw on right side of the lower
circuit board can be easily removed. Remove the screw on the left side
by by sliding the screwdriver between the top circuit board and the
metal frame which holds the two boards together.

Step 4

With these two screws removed, you can now lift the entire top panel
(antenna, volume, and squelch knobs) along with the top two circuit
boards as one unit. The two circuit boards will be connected to the
final circuit board (the one attached to the front section of the
scanner) by several wires. Simply set the top panel/circuit boards
alongside the front section of the scanner and you can leave these
wires connected.

Step 5

The microporcessor is located under the large metal shield on the final
board (the front section of the scanner with the display and keypad).
If you look under metal shield from the side closest to the bottom of
the scanner, you should see the row of diodes labeled D1-D5.

Only diodes D1, D2 and D4 should be present.

Use a small pointed tool to break off D4. You actually don't have to
remove it completely (unless you want to use it to restore additional
frequencies as explained in other MODs), you can just lift one side so
it dosen't make connection and then put a small piece of tape or heat
shrink over it, so it won't. Make sure it's not lifted to high or the

boards will not fit.

This will restore Cellular Frequencies in 30 kHz steps.

Step 5

Reverse the process to replace the top panel/circuit boards and the two screws that connect the lower circuit board. Replace the 6 screws from the top board. Replace the cover, etc.....

...the diode positions on the cpu board, of which only three are filled look like this. Where X equals a diode soldered in place.

D5 D4 D3 D2 D1

O X O X X Normal configuration

O O O X X Cellular modification(D4 removed)

O O X X X Lo-Band modification(D4 in D3's place)

These directions were based on an original MOD design whose origins I do not know. My thanks go out to the original author of that MOD! Hope this helps those of you who do not own a soldering iron!

PRO-43 Shortwave & Extended Receive
Al Mellon N8KLI

(This modification is only possible on radios able to be modified to receive the full 800 MHz range.)

Scope and nature of the modification: To allow the PRO-43 to receive frequencies from 6 MHz to 1000 MHz. This is accomplished by setting the PRO-43 to non-standard splinter frequencies, the CPU will then step the radio beyond the normal band edges. To derive the non-standard splinter frequencies it is necessary to change the diode configuration matrix, and to use the monitor-search function. The hardware modification should take about thirty minutes. The remaining programming / search will take as little as 45 minutes (depending on how interested you are in the signals you encounter during the 806 MHz to 30 MHz search to be run).

I made a few attempts to make deals with various radio mod shops. Most felt the time needed to make key pad entries was too long to make a profit.

< This is a lengthy modification. It can be found in its entirety in /pub3/hamradio/mods/tandy/pro43swl.zip at oak.oakland.edu >

From: ross@novax.llnl.gov
Date: 19 Aug 92 16:51:08 GMT

Here is my keypad beep delete mod for the RPO-43:

1. Remove battery.
2. Remove back cover (4 screws).
3. Remove top board (6 screws, desolder two antenna connections and bend

antenna ground lead up out of the way). Be careful of black connector at bottom of board. Flip board over and lay aside (wire connectors need not be disconnected).
4. Remove middle board (remove 2 screws and wire connector). Be careful of two multi-pin connectors along underside of board. Set middle board aside.
5. Locate 10 pin connector on side of bottom board (labeled CN3). Note that one end of connector has pin 10 labeled as such. Count back to pin 6 and bend pin 6 ninety degrees towards the large RF shield. Make sure the bent pin clears the RF shield.
6. Reassemble and your done OR do the cell mod since you are so close.

Have fun. Gary Ross >usual disclaimer>

Subject: Improved audio for the PRO-43 portable scanner
From: parnass@cbnewse.cb.att.com (Bob Parnass, AJ9S)
Date: Wed, 2 Dec 1992 01:15:35 GMT

IMPROVED AUDIO FOR THE PRO-43 SCANNER

by Bob Parnass, AJ9S

The Radio Shack PRO-43 scanner audio is too bassy.1 The lack of treble makes it difficult to hear the PRO-43 in noisy situations, especially while listening in a car or truck. Louis Shirley sent me a schematic and suggested I remove C341, a tiny 0.015 ufd surface mount capacitor.

I'm glad to report that removing C341 made a great improvement. The audio is now much "crisper," more like the Uniden 200xlt, although still not quite as loud. Turning the volume control up still overloads the PRO-43's small, internal speaker, but there's less need to do that once C341 is removed.

The PRO-43 contains 3 printed circuit boards, and the middle (second) board contains the audio circuitry. Finding C341 is difficult, as it is neither marked with a value nor a component designation. It is located on the foil side of the middle board, under IC304, an LM386 amplifier IC. C341 is in parallel with, and physically next to, R350 (33,000 ohm). R350 is slightly larger than C341 and is marked 333. Both R350 and C341 are connected between pin 2 of the LM386 and ground.

A Note About 50-88 MHz Reception

Now that I have a schematic, I see that the European version of the PRO-43 has different coils and capacitors in the low (mid) band front end filter. That explains why the 75 MHz sensitivity isn't stellar after adding diode D3 to enable 30-88 MHz coverage.

---

Subject: S-Meter for PRO-43
From: schuster@panix.com (Michael Schuster)

Found this on the Fidonet scanner echo:

=====begin quoted text=================

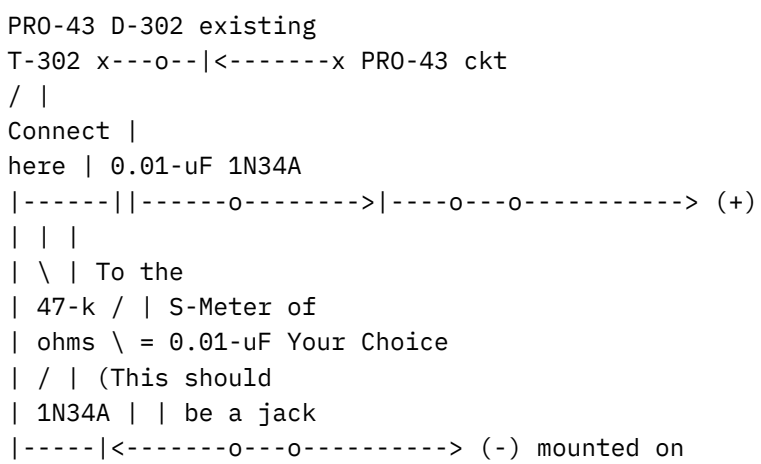
Date: 02-06-93 00:24
From: Bill Cheek
To: All
Subject: PRO-43 S-Meter!

Greetings Scanner Fans!

It had to happen! The fundamentals for an S-Meter exist alive and well in the PRO-43! Only a simple circuit and your choice of meter, analog or LED, is required for a jim-dandy S-Meter function!

The key point in the circuit is the cathode of D-302 located on the bottom (solder side) of the AF Board (middle board). You will need the Service Manual for the PRO-43 to find it as it's not marked and it would take me 10,000 words to guide you to exactly where it is located. Call Tandy National Parts at (800) 442-2425 to order your manual: approx $10. Now here is the deal:

Locate D-302 and either build the following circuit right there on the back of the AF board in the vicinity of D-302, or solder a wire to the cathode of D-302 and route it to somewhere else more convenient to feed the below circuit. This wire ought not to be very long, though, say not more than a couple of inches. Refer to the ASCII schematic diagram as follows:



^ PRO-43 Ground^ the case of
Legend: the scanner.
|
1. ---||--- and = are 0.01-uF capacitors; disk, mylar, monolythic, chip
|

2. --->|--- and ---|<---- are germanium diodes, 1N34A
| is cathode
< is anode

3. o means a connection, preferably soldered

4. The 47-k resistor is self-explanatory, I hope.

5. -------- and | are wires/conductors.
|
|

6. x is existing PRO-43 circuitry

If you use an analog meter, preferably a real S-Meter like salvaged from an old junked CB rig, then rig it as follows to connect to the circuit above:

```
5-k Trim Pot
(+) --------/\/\/\/\---o--------|
| | |
This should |-------| |
be a plug of +
some sort to The S-Meter
connect to the Terminals
mating jack on -
the scanner |
|
(-)----------------------------|
```

You can also build the 10-segment LED S-Meter as shown in Volume 2 of my SCANNER MODIFICATION HANDBOOK, available from leading mail order radio dealers everywhere. ISBN 0-939780-14-3 published by CRB Research Books, Inc. Commack, NY.

After connected and working, locate the PRO-43 very near a known strong transmitter, perhaps a ham transmitter, a police cruiser, your favorite security guard's handheld or right next to a cordless telephone, or anything else known to transmit a strong signal. Tune the scanner to the frequency, and adjust the 5-k trim pot above so the meter reads exactly full scale. All other signals will read proportionally lower to yield "relative signal strength" measurements! A hell of a circuit here, boys & girls! Have fun!

Subject: PRO-43 w/400 CHANNELS HERES HOW!

IT IS NOT FOR THE FAINT OF HEART however.

PRO-43 ENHANCEMENT
MEMORY EXPANSION & "FADE-AWAY" LIGHT
Brett Bennett 4/12/94
bbb@kuhub.cc.ukans.edu
Copyright 1994 B&D Electronics All Rights Reserved

INTRODUCTION

The following document details two enhancement modifications that are possible on the Radio Shack PRO-43 scanning radio. The first modification doubles the factory standard memory capacity, allowing you to enjoy an additional 200 channels of memory, plus 10 more monitor memories. After completing the first modification, it is a fairly simple matter to add a 7 to 10 second delay feature to the LCD back-light lamp circuit. I designed and performed these modifications on my PRO-43 and they do work. As I understand it, there (has been/is being) presented in WORLD SCANNER REPORT a similar memory expansion. I have not seen this modification and for all I know it is a better way of doing it. What is presented is a 'clean-room' design of my own that to the best of my knowledge is the only one to also offer a time-delay for the LCD back-light. Having said that, let me say:

I ASSUME NO RESPONSIBILITY FOR ANYTHING THAT MIGHT HAPPEN TO YOUR RADIO SHOULD YOU OR ANYONE ELSE ATTEMPT THESE MODIFICATIONS. WHILE REASONABLE CARE HAS GONE INTO THE PREPARATION OF THE FOLLOWING DOCUMENT, I CAN NOT GUARANTEE THAT THERE ARE NOT ERRORS.

The procedure described below is very complicated, and involves the soldering and desoldering of very tiny components and the cutting of printed circuit board traces. While the procedure is not irreversible, it will leave permanent scars inside your scanner. It should only be attempted by someone with moderate to advanced electronics experience. I don't think it should be attempted by, to quote someone else, a "weekend technician." If as you read through this you feel intimidated by the jargon and required procedures or if an electronic schematic looks like a strange piece of modern art to you, then this might not be the 'mod' you are looking for. The following document will assume you have obtained the materials listed below, especially the Service Manual, and you have studied the circuit in some detail. I will not describe

in great detail where every component is or where every solder point on the logic board should be placed. Having the Service Manual, and having studied the drawings therein will allow you determine to where it is I refer.

REQUIREMENTS

1 - PRO-43 Service Manual. (Tandy Parts # MS-2000300 - approx. $6.00)
1 - CD4053 - Triple - SPDT analog switch - Surface mount package (DigiKey #CD4053BCM-ND - approx. $1.50)
2 - 93C67 EEPROMs (Tandy Parts # MX-8050 - approx. $13.00/each)
1 - 100k x 5 resistor network. Common lead type. (DigiKey # Q5104)
1 - UN2111 PNP transistor (Q1 on Logic PCB. Tandy Parts #)
1 - 1 uF 16v capacitor.
1 - 10 MOhm 1/8-1/16W resistor.
Misc.:
Wire wrap wire-30 gauge. (Radio Shack)
Grounded soldering iron with approx. 1/32" tip or smaller.
Desoldering Equipment.
Digital Volt Meter. (Used to double check your VCC and Ground connections, pre-check switching assembly)
Utility knife with fresh sharp small blade. (Needed to cut traces.)
Strong hand held magnifying lens. (Needed to check solder joints.)
+5-10 Volt bench power supply. (Used to check switching assembly.)
Anti-Static work place and grounding wrist band.
Very fine needle nose pliers, wire cutters.

What is the best scanner to buy if my only interest is listening in on cordless and cell conversations. I went on a date with a guy and he has a car phone . After he dropped me off he immediatly picked up the phone . Was he calling another girl or discussing our date with a friend . I am not totally paranoid but it is worth it for me to know .

If the technology is there why not use it

Thanks , Kelly

OK, sure. You've listened to the local PD and FD. You've even listened to the air band and ham stuff. What about all that other stuff that's out there like your microwave or radio controlled cars transmitters? Betcha you haven't listened to those! why? Because it's stupid! But it's there.

And it's here - the Stupid Scanner tricks web page. (beta edition - still accepting stupid tricks)

http://users.deltanet.com/~rbarron

Come and see:Southern California amusement park frequencies, fast food frequencies, and other things you can do with your scanner that you could probably do better with less costly equipment! Something for everyone.

Plus, if you have more stupid scanner tricks let me know. You can e-mail me from the page or at rbarron@deltanet.com. Feel free to link to me, I'm also accepting links. Remember, this is the early version so it may be a little ugly.

Rich

The same sort of information is told by the police when someone gets pulled over. It is very disturbing to hear: SS#, DOB, physical description, license #, etc. Everything about that person who had the mis-fortune of getting stopped by the police. I guess there is no way around it though. I might suggest that if your state uses your SS# for your license # change it.

Wait 'till the twisted minds of the world find out about this.

Phil...

Subject: Bearcat 220XLT Test modes
From: stone@flowbee.interaccess.com (Tombstone)
Date: 31 Oct 1995 22:23:35 GMT

I have seen that many of the past test modes for various bearcat scanners
work w/the BC220XLT. Here is what I found

Power on with...

WX and L/O = voltage reading

2, 9, MAN = clears all memory

2, 9, L/O = screen test

2, 9, PRI = test freqs in 1-21 (note: the "out of band freqs" have been
removed)

2, 9, SCAN = test freqs (same as above)

Here is my real question, what the hell is this?

Do the voltage reading; now while it is displayed hit a number like '1'
The screen will read something like "UP 1.75"
You can change this with the up'down arrows
You can now hit 'WX' then the down arrow and it will say "LO 1.5"
This also can be changed w/the up/down arrows

There are "UP"/"LO" settings like this for each number 0-9 (possibly
referring to bank?)

Does anyone know what this is?

You will often hear the clerks make remarks about customers and other
employees. Several McDonalds in my area have gone to "Face to Face"
ordering, so you can no longer hear the customer placing a order. However,
the clerk at Window #1 still uses a headset to commincate the order to
the clerk at Window #2.

Pat,
Yes, you can hear yourself, or friends order... but the big thing
for me, is to listen for the off color remarks that the staff at the
drive thru make. One evening, while listening to a drive thru waiting to
place my order, a friend of mine and I heard the clerks discussing
between themselves whether black or white women had better breasts. You
name it, you will hear it at the drive thru. The real fun comes when you
freak out one of the clerks by commenting on something they say about the
previous customer... they start worrying that they might have said
something that went out over the intercom to the customer... this has a
chilling effect on the clerks. There is also what others have posted,
the enjoyment of tracking down the frequencies. I have heard the clerks
make comments about the staff at the fast food store as well... so, it is
very interesting. Just my $0.02...

Kelly, there's not many scanners that the neophyte could use to truly help your problems; while it is possible
to listen to cellular freqs on scanners, it would be harder to find the exact frequency your boyfriend was
speaking on. FYI, I'm not your mom or the FBI but I feel obliged to tell you that listening to cellular phone
calls that you are not a party to is illegal. That said, I suggest you just ask him who he was talking to,
after all, if you don't have trust, what do you really have?

They don't toast any of the buns anymore. It's not just the middle bun
of the big mac. A year or two ago, they got rid of all toasters and put
"Q-ing" ovens instead. "Q" means to microwave, in case you were wondering.

>
> Thanks , Kelly=====
Well, Kelly, sometimes it really doesn't pay to hear what's said....
Anyway, the best such scanner is one that picks up the frequencies in question.
I know, that sounds dumb, but that's it. If you are that close to the cell phone,
your odds of picking it up are good no matter which scanner you get.
There are ways to improve the odds, too. Find which frequencies are covered
in your particular cell, and scan those frequencies, instead of *all* cell
frequencies. This will cut the time it takes to find the *one* he's on.
Of course, you *do* know that what you describe doing is illegal. At least you
know it now, anyway. :-)

: Why? In quite a few cases, someone is trying to set up credit in your
: name. It really is that easy, and there are many folks who fall into this
: trap. Don't be one of them.

People often give this stuff out legitimately over the phone to people
who they trust. I did the other day (over a land line :)) to my bank,
they are asking me all that stuff to verify it was ME who they were
talking to. Kind of good they do that, IMO.

Most banks nowadays would rather you "talk" over the phone with an
automated voice machine which prompts you to press keys on your phone to
reveal your secrets. The scanner user can use a DTMF decoder to get the
digits you press on your phone (account, SSN, etc.). If someone has one
of these hooked up to their scanner, you can bet their motives are
something more ulterior than "entertainment".

Gentlemen,

In brief, no... but where do I begin?... at the beginning...

In the begenning, there are a cluster of satelitte dishes and fixed
directional antennas, VHF and UHF.

Desired signals are sent to receivers, decoded and each channel desired
(Sat./VHF/UHF) is sent to a panel. Some panels are designed to receive
multiple stations but the point is, each station's audio and picture levels
are independently adjustable.

The balanced output of the panel(s) then get re-assigned to 'new' channels.
These new channels are processed, sometimes scrambled or mixed with encode
tones, etc.

The 'new' channels are amplified, re-tailored and split many times before
it gets to your house. Finally, the signals are sent to customers decoder
boxes, in most cases and then your TV and/or VCR.

***Connecting a Dish Receiver to cable TV will NEVER work. Original 'raw'
state satellite data is long-gone by the time it gets to your house.***

Yes I agree, the Pro-51 is a very good buy, I've had mine now for
almost a year, I wasn't as lucky to get it at such a cheep price
either, but it does have real good reception capability, the only
thing I am torn over it as opposed to a later model now not being
manufactured Pro-43 is that it does not cover the Military Aero band,
and I am in a heavy Military area, with several MOAs around me with
all types of "dog fight" senerios less than 20 miles from my home
taking place... This scanner (pro-51) does not cover that band,
280mHz to 400mHz... But this is ok, its still a very good buy at
that.

Date: 1996-04-06 00:00:00 UTC
From: Ralph Brown <rbrown@westvirginia.com>
Message-ID: <4k50ls$2ds@news.mountain.net>
Source record: 236861

i have found that if you program the limits for the 2500-xlt to the following frequencies and get cellular fine(1269->1294 mhz). it seems that the 2nd if must be 400 mhz. i have also picked up cellular on the range between 808 and 822 mhz.

((((((((((((((((((((((((((()))))))))))))))))))))))))))

Mary,

You may be too far away?
You need a (better) outdoor antenna?
Your coax is too long, shorted or 'pinned'?
That group of channels is not in service (yet), but rest assured, they ARE
conducting business somewhere?!
Your scanner has those frequencies 'blocked' out?
There is nothing connected to the UHF/900 antenna jack?
The 900 MHz internal converter is defective?

What do you suppose the problem is? Can you hear ANY 900MHz transmissions
from other services in the band? Do you hear them well?

0000000000000000000000000000000000000000000000

Highest frequencies I found for LAPD:

821.1125~868.6875 About 30 frequencies.
lowest=WNVL471
highest= WNVL468
866.1125 has 4 call signs, 2 above and WNLV470 & WPFN690.

I do note the LAPD has a array of microwave dishes but my data does not
include them.

482. Trade 200 channel scanner for Icom R1

Newsgroup: rec.radio.scanner
Date: 1996-04-06 00:00:00 UTC
From: sba3020@InfoNET.st-johns.nf.ca
Message-ID: <4k532e$t6b@coranto.ucs.mun.ca>
Source record: 236864

Not happy with your Icom R1 or just want a base scanner.

I will trade you a Realistic PRO-2022 200 channel scanner that covers the full 800 MHz band including cellular. Same style as the PRO-2005 or PRO-2006

This is one of the scanners that scan cellular in the proper 30 kHz steps and not 12.5 kHz steps.

200 channels divided into 10 groups of 20 channels and 10 monitor memories

Scanner has programmable priority channel, direct search and limit search.

I believe the CE-232 and HB-232 computer interface can be connected to this scanner.

Radio comes with original manual and box.

Part of the problem is insufficient training and store stocking. I was
a management trainee for the company at one time, and had I not known
computers, scanners etc before I came in, I would have been clueless.
There training manuals are a joke, and so are their "Qualification"
tests that all employees (Full time) must take. Passed half the tests
without even looking at the stupid books before I left the company

after 5 months. Other problem besides lack of training is lack of stock. We would receive a shipment of "Hot New Product" in (new scanners, whatever) and there would be 1 of it, and if we were very lucky, 2. Very difficult for store managers to get extra product unless they are kissing up to the right person.

Traffic Reporting typically occours in the 450.0-451.0 and 455.0-456.0
mhz areas when I am driving around town and want traffic info, I either
monitor the area fire dispatch frequencies (154.19, 154.37 154.34) or
let the scanner search the above mentioned ranges..why listen to one
frequency when you can listen to ALL the traffic reports!

Was just reading the May 1996 issue of U.S. SCANNER NEWS.On Page 61 in an article titled "Hints and Tips", it states:
...(talking about good things to listen to).."Another good choice? The local media." Then the author adds "Yes, I know that monitoring the 450 and 455 MHz BPR frequencies is a forbidden by the ECPA."

My question Does the ECPA really forbid this? I knew about cellular and encripted communications. Maybe I need to pull the ECPA and read it. I certainly don't want to violate the law by intercepting communications broadcast over the public airwaves.

Small quibble, but it was Jimmy Ling who trashed Allied. By the time
Tandy bought Allied from Ling-Altec there was almost nothing left but the
name. LTV Aerospace had milked it dry, trying to prop up their conglomerate.
Tandy wanted to make Allied the industrial and high-end arm of Radio Shack,
but the Justice Dept. nixed the idea on anti-trust grounds. With virtually
no assets left in Allied and no chance to use the name to improve Radio
Shack's image, Tandy got rid of it. Today Allied is a division of Avnet and
has a quite impressive 1000-page catalog.

Remember - be especially careful on any cordless or cell phone, but these things should not be given out on any phone AT ALL! Not only are grifters trying to get this information by monitoring, they will call you on the phone and pretend to be legitimate credit card companies and the like.
If you get any call asking for S.S. #, mother's maiden name, credit card info., etc., just ask them to mail you the forms they are trying to complete. My guess is that many times you will not be sent the forms. Why? In quite a few cases, someone is trying to set up credit in your name. It really is that easy, and there are many folks who fall into this trap. Don't be one of them.
What is it going to cost for a legitimate company to send you the forms to complete? If they are not on the up and up, why won't they send you such material? Ask the caller these questions. Be cautious, since the credit history at peril is your own.

>
>The manual for my PRO-2035 shows it only having two IFs, whereas, the
>the advertising for the PRO-2042 mention it being Triple Conversion
>with three IFs. The rest is probably the same.
>

In the Feb 96 issue of MT, in the article titled "Virtual Downconverter", author Steve Donnell says "The Pro-2035 and its successor the Pro-2042 (which uses exactly the same receiver design) use what is referred to as "triple conversion." The 1995 Radio Shack catalog states that the -2035 is "our finest 1000 channel *triple conversion* ..."

Either there is more than one version of the radio or I think it's triple conversion (or maybe the manual is wrong :)

Price is now $400.00 US plus shipping.

The MVT 8000 is 200 channel ac/dc scanner with a mounting bracket for mobile use and comes with a cigarette lighter adapter although it can be hard wired.

It covers 8 Mhz to 1300 Mhz (continuous without blockage) and receives in WFM, NFM and AM. Frequency steps are 5,10,12.5,50 and 100 Khz.

It's got a 10 band search function, pass memory function, and other goodies found in high-end
scanners.

>HELP!
>
I FEEL YOUR PAIN! AT ONE POINT I EXPERIENCED THE SAME PROBLEMS
CONNECTING THE SCANNER TO THE COMPUTER. I OFFER THE FOLLOWING
SUGGESTION: MAKE SURE THAT THE INTERFACE CABLE IS CONNECTED TO YOUR
COM 1 SERIAL PORT!!! THE SOFTWARE CONFIGURES THE BAUD RATE AND COM PORT
AUTOMATICALLY. (MOST COMPUTERS USE THE COM 1 PORT FOR THE MOUSE) IT IS
ALSO POSSIBLE THAT IF YOU USE A MOUSE, THE MOUSE SOFTWARE CONFIGURES THE
PORT. IF YOU ARE LOADING THE "SCAN" SOFTWARE FROM THE AUTOEXEC.BAT
FILE, YOU MUST LOAD IT AFTER ANY MOUSE STATEMENTS. (DON'T EXPECT THE
MOUSE TO WORK AFTER THAT!) ANYHOW, THE SCANNER CABLE MUST BE PLUGGED
INTO COM 1. THIS CANNOT BE CHANGED THRU THE SOFTWARE. ALSO, MAKE SURE
THAT YOU ARE USING A 9 PIN SERIAL CABLE! A 9 PIN "INTERLINK" TYPE CABLE
LOOKS THE SAME, BUT WILL NOT WORK! ADAPTERS FROM 9 TO 25 PIN ARE OK.
HOPE THIS HELPS. I ALSO HAVE THE UNLOCK CODE FOR THE 800 Mhz IF YOU ARE
INTERESTED. E-MAIL ME IF YOU HAVE FURTHER QUESTIONS OR PROBLEMS.

It is possible that you are receiving Ham Watch units. These are hams used by LAPD to conduct special surveillances, such as auto theft, narcotics etc.

I'm guessing but i'll bet that it has something to do with computer data
mobile terminals.

Well, you just answered a long-standing question of mine. I was
wondering just who ARDIS was and why they had so many frequencies.

They are licensed on about a zillion 900-MHz band frequencies in
most major cities.

I don't have any ACARS equipment (yet) but from all I've read,
there is one solution to your problem (assuming you are listening on the
right frequencies and that you can hear the ACARS data through your
speaker):

Put the scanner in Manual mode. For an ACARS decoder to work,
it has to receive the entire signal, including preamble. It is not
really a "scannable" mode.

Not that this is on-topic or anything, but remember that because of the
way they produce images, SVGA monitors do not need screen savers at all.

Here is a thought: If the person that you are calling can hear what you
say then why can`t a third party listen in ? Okay, so its a bit more
difficult to listen but isn`t the challange half the fun?

The truth is out there, but can we hear it ?
Rick.

Excellent advice.
Try around Christmas time. It's appalling the number of people who do
mail order over cordless phones!

> easier..===
Hi, Rick...
First, get rid of that RG58 cable. You are using a scanner, not a CB.
Use RG6 sattelite cable (can be had at Radio Shack). There are better
cables, but the RG6 is inexpensive and available everywhere, and the
better cables are *marginally* better, more expensive, and harder
to handle.
Then, yes, you can split it. Use a standard TV cable splitter (again,
Radio Shack has them), and you will probably have less than 3 dB loss
of signal (about 1/2 an S-unit on a S-meter).
Amplifiers rerally need to placed as close to the antenna as possible
to work to the best benefit of the listener. That way, they amplify
the signal, not any noise picked up by the cable.
Hope this helps.

> connected to this scanner.
> Radio comes with original manual and box.==========
No, the PRO-2022 and the PRO-2004, -5, -6 are very different scanners.
Just for starters, the 2022 is double conversion, while the -4,-5,-6
are triple conversion.
And no, the CE-232 will not operate the same on the 2022, if it will
connect at all (I believe it will do *some* of the normal functions,
but it won't run the scanner, as they use different CPU's).

Hope this helps a little.

Either one will probably work equally well for the FM radio.
If I'm doing my math right, you are about 95 miles or so from the
transmitting antenna. From that distance, good TV reception may
require a fairly decent antenna, unless you can get some elevation
on it.
I'm basing this on experience from here in the States.

U.S. Navy Blue Angel
1996 Air Show Schedule and Frequencies

By Gayle Van Horn

Some Background and History
Confirmed Schedule and Show Frequencies

USN Blue Angels - Trained Specialists Keep the Blues Airborne

[Image] On June 15, 1946, the Blue Angels flew their first flight
demonstration to "demonstrate precision techniques of naval
aviation to naval personnel and, if directed, to the public."

Today, after nearly 50 years, the Blue Angels accomplish essentially the
same mission. However, that mission has taken on new perspectives.

By representing a faultless display of aerial artistry to what has now
exceeded 201-million spectators, the Blue Angels seek to attract
talented
and qualified youth to join them in the U.S. Navy and Marine Corps. This
is
an important function in an all- volunteer naval force.

As "Ambassadors of Good Will," the Blue Angels take naval aviation to
the
public as means of demonstrating the quality of personnel and equipment
comprising the U.S. Naval Service. When traveling abroad, this role is
expanded as these young men and women represent our country and those
who
serve it.

Internally, the Flight Demonstration Squadron strives to set a standard
of
perfection for its contemporaries in naval aviation, thus enabling our
Navy

and Marine Corps to continue to produce the finest aviators in the world.

Sixteen officers and 104 enlisted personnel comprise the Navy Flight Demonstration Squadron, the Blue Angels. Seven of the officers are tactical jet pilots: four of whom fly in the diamond formation, two are solo maximum performance demonstrators, and the seventh is the narrator for the aerial demonstration and also also provides jet orientation flights for news and media representatives.

The Events Coordinator is a naval flight officer and is responsible for all logistics coordination. The Public Affairs Officer is responsible for all public matters and media relations. The Maintenance Officer is in charge of the enlisted maintenance crew and is responsible for ensuring that the ten aircraft assigned are kept in top- notch condition. The squadron's Flight Surgeon administers to both the physical and psychological needs of the officers and the enlisted personnel. The Administrative Officer and Supply Officer perform their duties and maintain normal operations while the "Blues" are on the road.

There are also three Marine Corps transport pilots and five enlisted crewmen assigned to fly the C-130 support aircraft that carries the necessary equipment and personnel to perform demonstrations at show sites. The 104 enlisted personnel are specialists in all of the aviation roles to support and maintain the Squadrons' maintenance, administration, and public affairs requirements.

While visiting airshow sites, the Blue Angels visit hospitals, youth organizations, speak to civic clubs, and attend school functions in order to provide positive community relations. They also talk to young men and women with potential interest in Navy careers both on campuses and at social gatherings sponsored by local Navy and Marine Corps recruiters. In addition, the "Blues" devote a portion of their time to publicizing the flight demonstration in each city by way of TV appearances, radio and newspaper interviews, as well as having seven pilots conduct orientation flights for a representative of each news media.

By becoming totally involved in the communities where they conduct airshows, the Blue Angels not only achieve their objectives as ambassadors
of good will, but complete their assigned mission as well.

F/A-18 Hornet Strike Fighter

In the fighter configuration, the F/A-18 can maneuver with the best during
close-in combat.

Its Hughes APG-65 radar system has greater detection capability than the F-4J, especially in the tail-on situation. The aircraft's high thrust-to-weight ratio, and aerodynamic design enables it to substantially
out-turn, out-climb, and out-accelerate current fighters.

Standard air-to-air armament equips the Hornet with two AIM-9 heat-seeking
Sidewinder missiles, two AIM-7 radar-guided Advanced Sparrow missiles, and
an internal, nose-mounted M61 20 mm cannon. Additional missiles can be carried on wing stations.

In the attack configuration, the F/A-18 advanced APG-65 multimode radar has
high resolution ground map for navigation and identification of fixed, moving, and sea surface targets.

This combination of high performance and excellent weapon systems give the
Navy/Marine team the most modern and effective fighting machine in the world today.

The aircraft is powered by two General Electric F404 engines, which help the Hornet attain speeds of Mach 1.8+ and a combat ceiling of greater than
50,000 feet. The Hornet can also fly above the speed of sound with just intermediate power: afterburner power is not required, but is there when desired.

Because of its ability to switch from the attack to the fighter role, the
Hornet can be flown in self-escort. Pilots in either role get flight and target information from advanced computer displays in the cockpit.

Today's digital technology permits the pilot of the single-place Hornet to
have more system modes and usable data available than the combination of the three cockpits of the F-4 and the A-7 that the Hornet is replacing.

The airframe is a balance of conventional materials and carbon epoxy providing an optimum light-weight structure, resulting in appreciable weight savings plus increased aircraft performance over the F-4.

The Hornet is expected to serve the Navy and Marine Corps into the next century.

Maintenance Crew - Consistency: The Key To Technical Excellence

Maintaining the top-notch condition of the 10 aircraft assigned to the Blue Angels are the enlisted personnel who devote countless hours to the support and upkeep of the aircraft. They are a hand-selected group of individuals who are specialists in all of the aviation administrative and public affairs roles required to support the squadron's requirements.

Each potential crew member undergoes extensive screening and a personal interview before being selected. Many variables are weighed carefully. Not only the individual's professional record, but also his appearance, speaking ability, and military bearings are taken into account.

Upon selection, the individual is assigned to the Squadron for a trial period of one month. During this time, they must prove their professional ability and personal conduct. This period gives them the opportunity to become more familiar with the squadron's many traditions and the role he must play in each.

After this trial period, if they work efficiently as a member of the squadron, they are permanently assigned and receive the distinguished Blue Angel crest and traditional christening. The tour of duty for a crew member with the team varies in length, but is usually for a period of three years. As with all other members of the unit, each crew member returns to an operational unit at sea or shore upon completion of his or her tour with the Blue Angels.

In addition to their normal maintenance duties, the enlisted crew members play an important role in the public relations and recruiting missions of the Squadron. While performing at approximately 45 air show sites, they accompany the officers to hospitals, orphanages, and various selected community relations events to provide the public with an introduction to the Navy family. This demanding schedule of duties and frequent moving continues over 280 days each year.

In addition to the continuous travel to various airshow sites during the airshow season, the support crew deploys to El Centro, California, in excess of two months for an intensive winter training period. There they learn to work as a cohesive unit in preparing for each flight and maintaining the physical appearance of each aircraft. All practice

flights
are a rehearsal for the crew members, so that by the end of the winter
training, they are prepared for the pace they will be required to
maintain
throughout the show season.

During the show season, an alternate crew of 28 support personnel travel
to
the scheduled show sites to ensure the maintenance of the aircraft for
demonstrations. Their busy day begins at sunrise, inspecting and
thoroughly
checking out each aircraft. They provide assistance to the pilots in
starting the aircraft and give a visual check of the flight controls
prior
to each day's demonstration. The end of the day's show is just the
beginning for the crew. The aircraft must be polished and all
discrepancies
corrected to ensure readiness for the following day's performance.

Countless years of training, education and experience are represented by
the Blue Angels' support crew. It is due to the nearly 50 years of
technical excellence that the Blue Angels have never cancelled a flight
demonstration because of maintenance difficulties.

Blue Angel crew members carry pride, professionalism, and the
satisfaction
of a job "well done" with themselves upon their departure from the U.S.
Navy Flight Demonstration Squadron (Blue Angels).

Airshow Demonstration - Timing, Coordination, Professionalism, and
Teamwork

The sun slowly breaks the horizon, silhouetting the six sleek F/A-18's
nestled quietly on the TARMAC. Soon the still calm of the morning gives
way
to the ear shattering scream of the Hornets as the maintenance
technicians
do their morning checks for the day's airshow demonstration. To many,
this
is truly the sound of freedom.

Demonstration tradition, methods, and techniques have been developed and
revised by the Blue Angels over their 40-year history. Information is
preserved through documentation and is personally passed from one team
to
the next.

The community is a veritable beehive of activity as enthusiasts,
friends,
and family prepare to visit the local airfield to see the U.S. Navy Blue
Angels. Posters and billboards have been advertising the arrival of the
team for nearly a month.

The basic airmanship requirements of a Blue Angel are taught to every Naval
Aviator. As a student, the fledgling aviator learns loops, rolls, and
formation flying - the basic themes of the Blue Angels' demonstration.

The advantage of a home town show is the many civic, school, and hospital
visits made by the members of the Blue Angels. Today is the day those of
the community meet with the sleek, blue steel of a McDonnell-Douglas F/A-18
Hornet.

A Blue Angels' flight demonstration consists of six aircraft performing a
prescribed sequence of maneuvers. The aircraft are seen in three
components: (1) a diamond formation of four aircraft; (2) two solo aircraft
that oppose each other along the line of flight; and (3) all six aircraft
in a delta formation.

The tempo increases as the gates open to the multitude of spectators hoping
to achieve the best vantage point for the airshow. Some are viewing the
many military static displays for the first time as others are reminiscing
over the familiar aircraft of years gone by. All are anxiously awaiting the
aerial artistry of the Blue Angels.

The precision maneuvers demonstrated by the Blue Angels are coordinated and
continuous tactical techniques developed in practice and actual combat by
Navy and Marine Corps pilots. In carrying out this demonstration, the Blues
exhibit the highest performance capability of the strike-fighter aircraft
as well as the high level of training and skills which are characteristic
of Naval Aviators.

In combat, the tactics that the Blue Angels demonstrate might be from
treetop level to 60,000 feet. However, for the aerospace enthusiasts who
come to watch, the Blues bring all maneuvers down to eye-level
demonstrating to the public the kind of teamwork that has paid off for
Americans in actual battles from Midway to Vietnam.

As the national anthem plays, the circulating crowd stills, standing in
reverent respect. Afterwards, the aviation enthusiasts take cue and start
to press forward to the crowd restraining line. The excitement build as
the

public address system crackles to life signaling the first of the day's events.

The serious Naval Aviators who comprise the Blues bear little resemblance to the dashing daredevil barnstormers who performed before county fairs a half century ago. These are professional pilots with skills honed by thousands of hours in the air and many more thousands of hours learning engineering, navigation, meteorology, and electronics that must be second nature to today's jet pilot.

None of the maneuvers are stunts or "daring feats," for all are part of the stock-in-trade of any fighter or attack pilot. The maneuvers are, however, done in extremely close formation rather than individually and are performed at a lower altitude than normal. "Stunts" involve luck, the Blue Angels explain, and when you do the kind of demanding flying the Navy does every day, luck is something the pilot doesn't depend on. The secrets behind the smooth grade of the Blue Angels' performance are: practice, teamwork, coordination, alertness, top physical condition, and more practice.

Six blue flight suits march down the flight line parallel to the six jets. The ground crew initiates a thorough check of each aircraft as the jets' screams reach a high pitch. Smoke floods the ramp immediately behind the aircraft as twenty technicians clear the area. The aircraft then pull out and taxi to the end of the runway. Blue Angel jets one through four take off simultaneously, immediately forming a Diamond while only a few feet off the deck. Afterwards, the two solos take off separately, perform rolls and then start the show maneuvers.

The Blue Angels's tight Diamond formation is recognized as the squadron's trademark throughout the world. Flying a mere 36 inches apart with complete wing overlap, the Diamond illustrates the beauty and grace that can be achieved in formation flying.

Total concentration is devoted to maintaining the same relative position on the other wingmen. However, each pilot must consciously concentrate on the constant radio chatter which accompanies each movement of the formation.

Foremost, the pilots must stay mentally ahead of the sequence of events and
know at all times their relationship to the other aircraft in the formation
and to the ground below. All of these items are accomplished through
teamwork, practice, and discipline that is developed by flying thousands of
hours in a tactical jet aircraft.

The two solo pilots demonstrate the high-performance of their aircraft. In
order to dramatically emphasize each maneuver, they oppose each other along
the flight line at a closing speed of 1000 miles per hour and attempt to
establish a collision effect from the crowd's perspective or angle of
vision. This collision effect, or "hit," should take place at the exact
center point of the flight line. To do this requires exact timing.

The solo pilots train for their position of the demonstration as a separate
entity from the Diamond pilot. This is because the techniques and emphasis
for the Diamond and Solos are different. The same degree of concentration
is required of the Solo pilots as of the Diamond pilots. However, the focus
is now on exact timing and precise consistency of each maneuver while
operating at a very low altitude. The importance of timing is illustrated
by the fact that for every one-second of error, a maneuver moves off center
by one-eighth of a mile.

After a Delta (six plane) landing, the blue jets roll down the ramp and are
guided by the ground crew to a perfect six-plane stop. The pilots then
de-plane and proceed to the crowdline to answer questions and sign
autographs, thus ending the demonstration for another day.

Confirmed Blue Angel Show Frequencies:

Aircraft - 142.000 143.000 143.600 251.600 (Lead Formation) 275.350 (Solo
Aircraft)
Ground Maintenance Crews: 418.050 (Rptr Out)/408.400 (Rptr Input)

Note: While the team still authorized to use the VHF frequencies noted
above, the Blue Angels have not been heard on them in several years. It
would still pay to load these frequencies into your scanner in case they
decide to use them again.

Abbreviations used in these schedules
ACC - Air Combat Command
AFRES- Air Force Reserve
ALC - Air Logistics Command
AMC - Air Mobility Command

A lot of frequencies have been reported over the years for the Blue
Angels.
Most of these have turned out to be approach/departure, tower, GCA, and
ground control frequencies normally associated at the airports/military
bases they perform at. Before reporting a new flight demonstation
frequency, be sure to rule out other local possibilities and usages.

We want to hear from you. We would also like to add other flight demonstration teams both civilian and military to our home pages for others
to enjoy hearing. If you have an update to this list you can send it to: gayle@grove.net. Happy listening and I hope you enjoy the 1996 airshow season.

Has anyone modified their IC-R100? I removed the two jumpers, but I still don't get 800mhz. Any ideas?

Realistic PRO-39 Cellular Restoration Instructions By Larry Wiland

NOTE: It is unlawful to monitor mobile telephone conversations, including cellular. Although the procedure described below will restore
the missing cellular frequencies to your radio, it is possible to hear this range without any modification whatsoever by tuning in the image frequencies 21.6 MHz higher than the deleted ranges. Cellular calls will
be heard from 894.01- 915.6 MHz on your scanner without restoration.

Grove Enterprises assumes no responsibility for damages or other liability resulting from attempting to duplicate this procedure. It is possible that this modification may void your warranty.

TOOLS NEEDED: Fine-tipped soldering iron, desoldering wick, small Philips screwdriver, long-nosed pliers, rosin core solder.

(1) Remove the battery door, holder and batteries from the bottom of
the radio.

(2) Remove the 4 screws from the back of the scanner and carefully lift the back off.

(3) Unplug the two wiring harnesses at their connectors and remove the six bright colored screws holding the circuit board in place. Unsolder the ground wire from the lower right corner of the circuit board. Unsolder the two wire connections from the BNC antenna connector
at the board. Carefully lift the board (grasping it near the Molex connector) and set it aside.

(4) Remove the two bright colored screws from the next circuit board. Carefully uplug the two-wire connector. Unsolder and lift the rectangular metal shield exposing the diodes.

(5) Carefully unsolder and remove diode D6 only; this will restore the missing cellular frequencies which can be searched in appropriate 30
kHz steps.

This completes the cellular restoration. Reverse all procedures to
reassemble the radio and test it by entering any frequency between
869-894 MHz. Curious about the other diodes? D4 would enable 68-88 MHz
coverage, but deletes 30-54 MHz; D5 (present) allows 800 MHz band
operation; and D7 would make cellular spacing 12.5 kHz (incorrect).

It's diode D6 - I think its on the bottom board. Be careful during
dis/assembly.
I suggest you get Artsci's book. (818) 843-2298

Also possible:
Diode D4 - enable 68-88 Mhz (lose 30-54 Mhz)

cheers

> > the Rat Shack Frequency list.

158.400 is a valid frequency. 158.600 is not. Are you looking for
158.550 or 158.700? (158.7 is a paging frequency. I'm not sure about the
others without looking them up, but without knowing where you are, it's not
possible to give much useful info anyway.)

Robert,

McDonalds Canada's Main frequency is 30.58 and 154.49Mhz, there are
currently over 400 stores on these freqs.

Also the systems in Canada are built by HM Electronics not Panasonic.

Brian

Aaron:

I haven't performed that particular modification, but with many, they require you to perform some type of re-set operation when you are finished. I think the ICOM R-100 reset button is in the back, through a very small hole in the chassie back plate. You poke something like a paper clip in there and push on a small membrane type button to reset the CPU. WARNING!!! This will of course delete any and all programming performed by you previously, i.e.: frequencies, step rates, modes, banks, etc. But it should get you the results you want. Then reprogram your frequencies and you're in business!

Good luck, Bill Crocker

Cross-posted to: rec.radio.scanner,alt.radio.scanner

The Icom R1 is plagued with severe front end overload and intermod.

If a person pays more than $150 - $200 for the R1, then they got ripped off!
Several years ago, I purchased an R1 new for $500.00. At first I thought
that my unit was defective, so I exchanged it for another R1. The second
scanner performed just as poorly. When I found that a $100.00 Radio Shack
Scanner will provide better performance, I returned the R1 for a full
refund. Before returning the scanner to Icom, I discussed the problems
with the Icom repair technicians in the Irvine, Ca repair facility. They
confirmed all of my findings regarding the radio to told me that it was a
result of poor design and attempting to fit "everything but the kitchen
sink" into a receiver as small as the R1. My posts regarding the R1 are
targeted at "newbies" to the scanning hobby. For the money, they will be
much happier with a Bearcat 3000XLT or any other good RS or Uniden
Scanner. As for the R1....,
I would like to own one simply for the portability. and will pay up to $150.00.

For Sale: Uniden Bearcat 350A Mobile Scanner

Covers the following frequencies (MHz):

29-54, 108-174, 406-512

Includes preprogrammed frequencies in banks for Police, Fire/Emergency,
Aircraft, Marine, and Weather. (Police and Fire banks have 20 and
10 user-programmable slots respectively.) Also includes a private bank for
20 additional frequencies.

Antenna, all manuals, hardware, etc. (including car mounting bracket and
cigarette lighter adapter) included. Can be used on 120V house current
with adapter (not included, Radio Shack 273-1652, ~$10).

$60 or best offer.

Send email if interested.

538. Antenna selection device needed.

Newsgroup: rec.radio.scanner
Date: 1996-04-07 00:00:00 UTC
From: smcintyre@whoi.edu
Message-ID: <smcintyre-0704961537310001@netnews.whoi.edu>
Source record: 236770

Hi.

As I've gotten more and more into scanning since the start of this year, I've realised that certain antennas are better at picking up certain frequencies and bands of frequencies.

There are two immediate consequences to this...

1) One ends up having many antenna's attached to various poles and masts around their house. This may violate local zoning rules, but more importantly, it's ugly to most people.

2) One ends up with one lead for each antenna coming into their house, plugging into some sort of a box, or plugging straight into the scanner.

It strikes me there is an excellent marketplace for an exterior selectable antenna box that either responds to remote control or has some clever way of bringing all of the signals from all of the antenna's together into one lead which is all that is needed to connect to your scanner.

Does such a box exist? Is this even remotely possible to do?

I think I can convince my wife to let me make the back of our new house a little bit uglier with a few more antennas, but there's now way she'd let me drill more holes or run more RG6 from outside to inside...and I really don't want to do it either.

The remotely controlled box could for example have a simple electronic circuit inside which would let the user flip between multiple inputs...all to one output. The box could have its own battery and be sealed against the elements...the remote control could be a simple wired device (wireless may be too much to hope for) that could have one button, effectively "change input"..

This way, this "box" can have all the inputs from all your exterior ariels all wired up to one location and one cable going through your walls, attic, whatever.

It strikes me that this can't be too tricky, but I don't know a thing about how to make one myself. If Radio Shack can make a simple A/B box for coaxial, someone somewhere must know how to make a non-manual similar device. I don't relish the thought of walking outside to my antennas every time I want to change source...

So, is it possible?

Scott

What? This sounds like an awfully arcane law, back to the days when scanners had ten or so crystals, one for each frequency. Yes, if the found a police frequency crystal they could bust you.

But now, all you need to do is push a couple buttons and clear the frequencies out of memory.

John (john-ma@chch.planet.org.nz) wrote:
: I'm considering buying a cordless phone setup for home, but I'm a bit
: worried that other nearby hand-helds, using the same frequencies,
: might be able to activate my base set and use my number.

Some of the older ones can.

However, there are a couple of things which protect you. One, when you are on the phone, the signal from your handheld is so strong that's the only one the base hears. It is next to impossible for another signal to "take over" your line when you are talking on it. Also, when you "park" the phone in its cradle, it is designed not to respond to any outside signal.

Also, most all phones made today have a 6 or more bit security code which the base will only respond to a handset with that code. It doesn't stop interference on the same channel, put it prevents others from accessing your line.

Cordless phones have been around long enough that this problem does not really exist anymore. Back 10-15 years, people used to take their cordless phones and just walk down the street until they got (someone else's) dial tone then call whoever they want around the world. This was recognized as something which needed to be fixed.

As long as the phone is reasonably new, I wouldn't worry.

543. Buy or Sell a Scanner Lately?

545. Yupiteru MVT7100 battery charging circuit problem

Newsgroup: rec.radio.scanner
Date: 1996-04-07 00:00:00 UTC
From: mod@world.std.com
Message-ID: <DpIJpF.7I9@world.std.com>
Source record: 236777

Is anyone familiar enough with the charging cicuitry on the MVT7100 to tell me what I might have done to mine to break it? Until recently it had been working perfectly (like everything else on these nice little radios) since I bought the unit about two years ago. Now, however, all that happens when I plug in the cable from either the AC transformer or from my automobile cigarette lighter (both of which I have been using all along with no real problems) is that the "batt" segment of the LCD starts blinking. I am only able to operate the radio using batteries now, which is a very unsatisfying situation.

In the name of full disclosure I am obliged to report that the troubles started around the time that I replaced the plug on my auto cigarette lighter cable. In my defense I must say that I was EXTREMELY careful not to reverse polarities of Ring and Tip on the plug. I should add that I had already replaced the same plug on the AC adapter about a year ago with no troubles and I'm not generally stupid about such things. Is it possible to examine a fuse or something inside the case? Failing any do-it-myself remedies, what's my best repair option? Can I get this thing repaired in the US or must I ship it back to Japan?

Regards,

Michael O'Donnell mod@std.com

I WILL EXPLAIN HERE WHAT I WANT TO DO, AND THE EQUIPMENT I
INTEND TO USE. I WOULD APPRECIATE ANY FEEDBACK.

I JUST RECENTLY(LAST FEW DAYS) GOT MY PRO 2006 COMMUNICATING WITH MY 486
DX2 66 THROUGH OPTOSCAN'S OS 456 CONTROLLER CARD.
I HAVE DEMO VERSIONS OF SCANCAT, SCANSTAR, AND SCANNER WEAR. I CANT REALLY
SEEM TO MAKE MUCH SENSE OF ANY OF THESE SOFTWARE PACKAGES YET. I HAVE A
LINE ON A DEAL ON A USED AR800 THAT I WILL BE PURCHASING THIS WEEK.

I WANT TO LET MY SCANNER SCAN ALL FREQUENCIES ISSUED TO PARTICULAR
AGENCIES IN MY SURRONDING AREA. I WANT TO DETERMINE WHICH FREQ'S ARE MOST
ACTIVE AND WHEN. I WILL ASSUME ANY FREQ'S THAT APPEAR TO HAVE NO ACTIVITY
ARE EITHER NEVER USED, OR ARE ASSOCIATED WITH A SET OF RADIOS THAT ARE
ONLY USED FOR SPECIAL OPERATIONS.

AFTER I DETERMINE THE ABOVE INFO, I WANT TO BE ABLE TO PLUG IN MY AR8000,
AND WITH THE HELP OF THE COMPUTER, PROGRAM THE HANDHELD 8000 TO WHATEVER
FREQ'S ARE APPLICABLE TO THE ENVIORNMENT OR GEOGRAPHICAL AREA THAT I WILL
BE IN.

BANKS MAY AS FOLLOWS.

BANK 1 : JONESTOWN POLICE DEPT ACTIVE FREQ'S
BANK 2 : JONESTOWN POLICE INACTIVE OR SPECIAL OP FREQ'S
BANK 3 : BODY WIRE FREQ'S (STATE)
BANK 4: BODY WIRE FREQ'S (FEDERAL)
BANK 5: JONES COUNTY SHERIFF DEPT ACTIVE FREQ'S
BANK 6: JONES COUNTY SHERIFF DEPT INACTIVE OR SPEC.OP. FREQ'S
BANK 7: HENSON COUNTY ACTIVE
BANK 8: HENSON COUNTY INACTIVE OR SPEC. OP..

ANS SO ON.

WHICH SOFTWARE PACKAGE WOULD BE THE BEST FOR WHAT I AM TRYING TO DO??

HOW DO I MAKE THAT SOFTWARE PACKAGE DO IT.

AFTER I DETERMINE THE ACTIVITY OF ALL OF THE FREQ'S ISSUED TO THE AGENCIES
IN MY SURROUNDING AREA, I PLAN TO PUBLISH MY FINDINGS.

I ALREADY HAVE INVESTED CONSIDERABLE TIME, EFFORT, AND CASH IN MY SCANNING
HOBBY, AND WOULD LIKE ANY HELP ANYONE OUT THERE CAN GIVE. LIKEWISE IF I
CAN BE OF ASSISTANCE TO ANYONE READING THIS MESSAGE, IT WOULD BE MY
PLEASURE.

E-MAIL OR CALL TONY AT (813)441-8476 ANYTIME.

For sale: AOR 1500 (hand held unit... it is quite very light in weight)

Continuous coverage from .5(as I recall) -> 1300 Mhz, there are NO GAPS. Comes with rubber ducky antenna, 15 foot antenna for SW, cig cord, ac changer, ear phone, AAA battery holder, nicad. batt pack., and leather case. The "wide band monitor" does WFM and FM, also AM. It has 1000 channels! It does multiple different steps, too. It is just like new. No dents, dings or scratches. It even still has the little plastic sticky thing on the top of the receiver, just like when you buy it new. Will sell as a whole package. All the stuff is original. I have the manual and box for it too.

Asking price is $800, includes shipping. Price is VERY flexible for me, since I am in school and need the $$$$.

Please call me if you have any questions, comments, or want to talk about a possible purchase. Call anytime of the day (literally).

DO NOT E-MAIL about this since I do not access my account very often.

I'm no expert on ECPA but it *does* cover broadcast remotes. So is
that limited to the station to transmitter links and the so-called
Marti units in the 160 mhz range or does it include 450 mhz
transmissions. They could be classified as *remotes*.

indeed this could be a cheap solution (in term of development time). There
are some alternate solutions available directly on the Newton. The benefit
of the FileMaker Pro way would be to have 2 interfaces Mac and Newton
available.
To answer Rich Barron, focus should be first on the database for everybody
(or shall I say, happy fews) lucky owners of a scanner and a Newton. Once
this is done, it would interesting to address the scanner control.

According to RS Beyond Police Call, 158.400 MHz comes under the heading
of Special Industrial Radio Service. I couldn't find 158.600.

158.400 could be any ONE of the following: Heavy construction, such as
roads, bridges, pipelines, sewers, etc; mining; farming and ranching;
construction, maintenance and supplying of oil and gas wells.

Hope this helps.
Cheers, Ron Cain

Why wait ? There are several good databases for the Newton (including my
own, NewtDb) that can "download" from FM (& other) databases to Newton.

David M. Pompea - DMP Systems http://net2.netacc.net/public/dmpsyst/

I used to own one of these. Traded it on a Yupiteru when they
first became available.
In all honesty, the Icom was not all that bad. Amazing how
legends grow. The Icom had a problem with discrimination and did
not have a great battery life but it was all there was!
Progress has passed the ICR1 by...but it was something else,then.
Icom's sin is that they have not kept up....because they have had
other priorities ? I suppose that the problem is that there has
not been an ICR2.
I still regret parting with my ICR1...a piece of scanning
history. I didn't know there was actually anything wrong with it
until I got my Yupiteru.

I'm considering buying a cordless phone setup for home, but I'm a bit worried that other nearby hand-helds, using the same frequencies, might be able to activate my base set and use my number.

Can someone explain exactly how (if at all) cordless phone technology prevents that from happening?

> Hope this helps.

If you get rid of the RG58 coax, DON'T get RG6...you aren't using a satellite, your're using a scanner. Get RG8 By the way the impedance of scanners are like the impedance on CB's... 50ohms. Get a splitter like RS#278-198

There are couple reasons why I play with fast food freqs. First off, I just like collecting them. Its like rocks or stamps. It's fun finding them, and you can never have too many. Second off, I can remember working at a drive through McDonald's and laughing to the inside channel at people driving by. It serves to fulfill some of my time whenever I am wolfing down a burger. I'm just eating, why not kick up some freqs too?

No matter how convenient a cordless phone is, or how many laws they
pass trying to make cordless communications secure, you have to be
aware. I have a scanner, and I always go to the secure LL if I'm doing
any kind of business to conduct. It's just plain common sense, and
it's foolish to think that you can pass laws so that you can shout
from the top of a building and no one will listen...

I think an FAQ is needed, too. Part of the problem is also that there
is a constant flow of new people who haven't read or had those
discussions yet. So, they have them here, and we read them over, and
over, and over ad nauseum. Perhaps someone could act as an editor, and
compile "articles" farmed out to interested parties. Useful websites
(like Percon and Grove) could also be included.

: prevents that from happening?

Your concern was very real when cordless phones were first introduced. Virtually all cordless phones sold today pass a security code between the handset and the base prior to the start of a call. If the handset does not send the right code, the base does not allow access to the line. In addition, many also include a feature (called COM-LOCKtm on RadioShack units) that prevents ANY call if the handset is actually sitting in the base. On most models, the security code is reset to a new code every time the handset is returned to the base, and they typically have 65,536 or more codes (i.e. a random 16-bit number).

More to worry about than someone using your line is someone hearing your phone call. Legalities notwithstanding, I know of no scanner sold that cannot pick up cordless phone calls made on standard 46/49 MHz phones. You can virtually eliminate the possibility of this happening by getting a 900 MHz Digital phone. You will pay 3-5 times as much as a standard analog phone, but you gain privacy, better range, better audio, and (usually) longer off-base battery life,

With the scanner off, press and hold the 'MANUAL', '2', and '9' key.

Then turn the scanner on while still holding the buttons. This will
reset your scanner to all 000.000 for every channel.

I have used a simliar device made by radio shack, The best thing about it is the wife does not hear the noise coming out of the radio and I can work around the house and list to the radio! I can sit at the computer and also listen to my nets!

But like I said, the wife is does not hear the radio so she stopped complaining about me being "on the sqawk box" all the time.

I think everyone should have these things around!

Paul

572. FM or TV antenna ?

Newsgroup: rec.radio.scanner
Date: 1996-04-07 00:00:00 UTC
From: martyn@twics.com
Message-ID: <4k7loj$p4q@dub-news-svc-2.compuserve.com>
Source record: 236842

This is not quite a scanner question but I'm sure the knowledgeable people here can help.

I live about 160km away from Tokyo and want in install an external antenna to pull in the FM radio. With a regular whip antenna I can get a bad signal but the programmes are there, just not enjoyable quality.

My question is regarding the antenna. My friend has a TV antenna and can get the Tokyo programmes pretty well so I was going to install a TV antenna and point it towards Tokyo but the store also has radio antennas.

There is a two element FM antenna (76-90 MHz) or a five element VHF TV antenna (chs 1 to 12 = approx 90Mhz to somewhere higher!)

I would like a TV antenna anyway because I might be able to pull in Tokyo TV but the real reason is for radio. Would the two element FM antenna deliver a much better signal than the 5 element TV antenna ?

Your thoughts are appreciated, by email or to the group.

Thanks

Martyn

Use a cable-tv splitter.
Make sure the cable-tv splitter goes high enough in frequency for the
signals you like to listen to. A good splitter to look for is one that
goes up to 1GHz. It will actually go higher but is not as flat as it
is below 1GHz.

I am planning to buy a new scanner soon and have heard that the BC9000XLT has superior performance. Interested in your opinion if you own or have experience with this using. If I am going to spend this kind of money(about $400), am I better off looking at something else. Looking for good reception in crowded metro area, flexibility in selecting channels to scan and a good search and store capability.

Thanks for your help.

in general it was a dog of a scanner.

It is my understanding that the 3000 is much better.

Nope, *image*. The input (or the signal from the phone to the base antenna) is
down in 824.04 to 849.90 (or real close thereabouts).

Hello all!
I have started a new WWW page devoted to scanning in the
Philadelphia area. Right now I have about 50 or 60 active frequencies
listed and I would appreciate if anyone would e-mail me with any
corrections or additions. Although it is just a list of frequencies
now, I hope to turn it into a complete guide for scanning in the Philly
area. Please e-mail me with any questions or suggestions about what
kind of information you would like to see included.

The address for the page is
http://www.lookup.com/homepages/102393/scanner.html.

Thank you for your time and I hope to see you there!

Wrong. Impedance *is* important for receive, but it is not as
important as it is for transmit. You don't have to concern yourself
with the possibility of the front end self destructing if you have
an impedence mismatch, but all the same, a properly matched receiver,
cable, antenna system will bring you better reception.

591. BEST MOBILE SCANNER???

Newsgroup: rec.radio.scanner
Date: 1996-04-08 00:00:00 UTC
From: thooker@psl.nmsu.edu
Message-ID: <thooker.121.00111568@psl.nmsu.edu>
Source record: 236661

I am looking for information on a good mobile scanner. I have experience with the Radio Shack 2026 (correct part number???), and was not impressed. Suffered from intermod, even in the sparsly populated area I am in.

Also have a Icom R100, not to impressed because of slow scan speed, no 'banks' etc. I am impressed with its overall performance, it is just not a scanner.

I hear that AOR makes a mobile. Also I have never tried the Uniden 760 (think that is the number). I want something with lots of banks (I will be programming the banks with different areas, so a bank can be enabled as I travel through the area).

Any suggestions would be appreciated.

PS The R100 is for sale!

: > cheers
: oooooooooooooooooooooooooooooooooooooooooooooooooo

: hh,

: 1. Can I ask what you are using to measure your frequency?
:
: 2. *All* frequencies checked in LAPD data end with a "5" or "0".
: This includes the new 800MHz listings.

: 3. I suppose there could be a special federal agency/task-force that
: loans 'special' radios for specific bust(s)? Anything goes then,
: feds can use ALMOST any frequency they please for short-time use.

: ***Can I ask the specific frequency? That may help localize the signal?

Now, interestingly enough, in my area, Columbus, OH I also discovered
such a frequency..... Looking it up on the web site frequency database
turned me on to it (My scanner doesn't have such high capability)... I
saw a freq, complete with callsign assigned around 1200 Mhz. CPD uses an
800 Mhz trunked system.

While I am not sure, it is possible this could be some sort of relay or
control frequency.

The guy could be onto something.... not just
an image or someother such stuff....

Could be woth looking up online... database may have it... I forger the
web address right offhand.

: I would like to own one simply for the portability. and will pay up to $150.00.

You seem to have quite a chip on your shoulder.

The R1, like any piece of equipment has good and bad points. I have one
as well as many other radios, and in my area (rural) it performs
just fine. The user interface is somewhat annoying, but I don't
have the overload and intermod problems that you had.

I also had a Yupi and an AOR8000, and junked them both because they
were comparatively deaf. The R1 is way overpriced, yes, but sop
are the other high end radios.

I can't see using an R1 for searching out new frequencies, but
in areas where signals don't swamp the front end of the radio,
it works well as a receiver and pretty well as a scanner (the slow
scan speed is a problem though).

I would definitely agree that it shouldn't be anyone's primary
radio though. Especially if they want the low frequency coverage.

Good luck finding one for $150. I sold one recently for over $400
and had no trouble finding a buyer.

594. New LAFD T-Shirts

Newsgroup: rec.radio.scanner

The LAFD's popular March-of-Dimes T-Shirts are -now- available.

You can see this year's design by visiting the "LAFD March of Dimes Walkamerica Challenge" page at the LAFD's Internet Website at:

http://www.ci.la.ca.us/dept/LAFD/index.html

The shirts, which feature a colorful full-size rear and small front logo, CANNOT be ordered at the Website.

If you wish to purchase one of these shirts, call J. Andrade at LAFD Headquarters during normal business hours (M-F 0800 - 1700 Pacific Time) at:

(213) 485-8674.

I don't have the price list, but I believe them to be very affordable ($10-15 price range).

Stay Safe!

>: with a decent antenna.

>Image frequencies, you mean. I guess it's nitpick time.

Input frequencies.

When you make a cellphone call, there are two frequencies, the one the cell transmits on and the one the phone transmits on. There's probably a proper term for the two, but "input" and "Output" will suffice.

The one the cell transmits on is the one to listen to; ignore those pretty beehive pictures, in the real world cells overlap! with a good antenna and tuning in the cell frequencies you can hear much more than just your local cell, you hear calls from cells all around you. Take your scanner up a mountain, and with a good aerial on the car you can pick up a call on just about every available channel, most of them from cells MILES away. And you get both sides of the conversation; the cell adds "sidetone", your own signal back to you because otherwise it's really freaky like talking into a dead phone!

The phone, OTOH is fairly low powered, not usually in a good location transmissionwise, and carries only half the conversation.. but if you're right next to one, you can wind the squelch up and find THAT phone in a jiffy.

(Image frequency is a totally different thing..)

The PerCom company lets you do searches by city of their database of
all comercial frequencies:

http://www.perconcorp.com/db_srch.htm

Also, EEB in Vienna sells the Washington-Baltimore Scanner Almanac for
20 $ that has 500 pages of interesting frequencies with comments.

You can also try the following web page that has some good area
frequencies:

My recommendation would be BC2500XLT. I've had mine 2 years and love it! I've had 7 or 8 scanners, some Bearcat, some Radio Shack, one Regency, the Bearcat has been the most "solid". They are no longer made , as they can be modified for Cell. Good Luck. Any specific questions, feel free to e-mail me.

Although I don't know FOR SURE, the chances are almost certain that scanners are NOT legal in Israel. For Military and security reasons, if nothing else. I did bring one in on my last visit, but not being fluent in the language, I wasn't sure if I was listening to Police or taxicabs. The military is all over the place, frequency-wise, so I'd say that you would not want to be caught with a scanner over there. You probably would not be going back home with it.

Jim,

You have been doing this for years, and to the above I say:

Anyone who has an R-1 owns a very nice, compact scanner. I will admit
that they have intermod problems WITH THE FACTORY ANTENNA. I have also
been saying THIS for a long time. The R-1 will perform much better with a
'stubby duck' antenna. The R-1's problems are due to excessively high
gain. This can be eliminated with a terribly cheap, low gain antenna. I
have been using my Icom R-1 for over a year now with a Kenwood antenna
that costed only $3. It makes the R-1 smaller, and a great performer. You
couldn't buy my R-1 from me for $500. So, Mr Scanner Police, before you
put an item on your sh**list, explore options such as the one I have
posted here sixty-trillion times.

Anyonelse who reads this, go ahed & get an R-1. also buy a cheap antenna
with the lowest gain you can find. You will not regret it.

Nate.

Barry really makes me laugh. Every so often he posts the cordless frequencies for Australia, but he makes it look like the North American frequencies are bogus. This whole routine is really getting old, and doesn't help anyone in the discussion here, and may even confuse some. Although I can understand that he might want the world to know that Australian phones are at 30 MHz, his postings don't really help anyone. He obviously knows by now that North American cordless is on 43-49 MHz, but somehow just skips over that knowledge as he is posting.

Source record: 236717

The nicest feature to have on a scanner is the ability to
program the unit to scan a specific frequency range.
This way if you do not know the specific frequency being
used you can have the scanner search the area where you think
the event is operating.
If you think the user frequency is 451 Mhz, you can then program
the scanner to scan between 450 Mhz and 455 Mhz until you locate
the desired frequency.

>Sorry, but what's an "oddence" ?

That should have read "offence" ...

>It's not illegal to scan the police overhere in the colonies.

In the UK it is illegal to monitor anything other than licenced
broadcast, CB or amateur transmissions without the appropriate authority
from the licenceing authorities.

Walk through *any* city main street with a hand held scanner on the
local police frequency running and you'll soon know about it ..:-(

>prevents that from happening?

You are very safe from another cordless phone activating your phone's base unit... See all of the phones since the middle 80's have been using a series of thousands of possible codes, which keep it impossible to find on two phones at the same time near eachother. And the code always changes once you return the phone to the base unit and place it in the charger. Security among access is very good, HOWEVER, I strongly advise you that if you want to buy a phone, your MAIN CONCERN should be over "easedroppers" like myself. If you want to keep your phone calls secure and private, then you either have to do it from a regular landline phone, or goto a Digital Spread Spectrum cordless phone... At the least get a motorola secure-clear phone, it uses older scrambling technology which I seem to notice everyone asking for instructions how to descramble, but as a first-line defense its good. I wouldn't use anything LESS than a motorola secure-clear phone, you can get them just about anywhere, Service Merchandise has a full line, so does Sears... But if you want TOTAL security from easedroppers like me, then you need to get a more exspensive cordless phone, thay are in the 900mHz band, and ask around for the DIGITAL SPREAD SPECTRUM phones.... These are IMPOSSIBLE to monitor by a scanner.

The NeXus!

Impedance isn't important for receive. RG6 is less expensive and a smaller
diameter, hence easier to work with. Go with RG6.

That's the problem. No one wants to go 50 miles out into the countryside
to avoid RF bleedover on the R1. Most of today's scannists are urban
users in an ever increasing harsh RF environment.

I think you are confusing it with the AOR1500. I've never had any problems with my AOR1000 or AOR1000 XLT. The AOR1500 has the intermod problem you are describing.

the remote antenna switch you are referring to already exists. many hams use this device today. there are several ways to control it. it is usually one or more relays at the antenna and a single feed line. it can be switched by multiple wires that run up to the box or simply by sending the control voltage up the exact same coax that your signal is coming down. there are several simple diagrams of this in amateur radio books. please take a look at my radio shack on my new home page and it also has links to amateur radio and much more. go to http://www.cris.com/~tcmedlin

If you plug a dummy plug into the Yupi's power jack, while running on batteries, you'll also see the "BATT" indicator start flashing. I assume this is because the power socket has a switch which reroutes the battery circuit when there is an external source connected. In your case, though, the external source isn't seen.

Did you break the center spike of the socket itself?

Did you somehow crack the solder joint where the + pin is connected to the PC board?

>one?

>Thanks
>George

I have the CREATE Log Periodic, and it is a well constructed and
engineered antenna, with good gain. I have a very good discone, too,
and the Log Periodic is naturally much better with weak signals, such
as military air excercises about 200 miles away. Here in town the
discone is more than adequate, since I have almost line of sight to
most of town from my house. One thing you should know about the
Log Periodic is that if you mount it in a vertical polarization
orientation, you MUST have a non-metallic mast to support it. CREATE
(and others) offers a 4-foot fiberglass mast, but in my opinion that
is way too short, if you mount the mast in a tower and rotator,
since the bottom half of the antenna is still going to be near the
tower. I operated mine on a metallic mast for over a year until
I found am eight-foot fiberglass mast, and the performance on the
metal mast was lousy; SWR was very uneven across the bands, and
directionality was terrible (170-degree half power beam width!!!)
A friend has the Scanner Beam made by Grove, and comparisons
with his results seem to indicate that it is pretty much comparable
in performance to the CREATE, but I'm waiting for the next time we
have 100-mph winds, and I'm betting the CREATE will still be
up there afterwards, but not so sure the Grove will be. We'll see :-)

In transmitter systems any impedance mismatch will result in the radio waves being reflected back to the transmitter. At higher power levels this is dangerous to the transmitter, and can damage it. You will also lose your output power. On a receive system, the radio waves come in from the antenna, any impedance mismatch along the line will reflect those waves back out the antenna. But there is no danger to your radio. If you really want to use RG-6, you will need to match your scanner and antenna to your line.

In transmitter systems any impedance mismatch will result in the radio waves being reflected back to the transmitter. At higher power levels this is dangerous to the transmitter, and can (will) damage it. You will also lose your output power. On a receive system, the radio waves come in from the antenna, any impedance mismatch along the line will reflect those waves back out the antenna. But there is no danger to your radio. If you really want to use RG-6, you will need to match your scanner and antenna to your line (for best results). When both the antenna and scanner have 50ohms impedance, why complicate things?

Impedance mismatch in a receiver (of the range we are talking about, i.e. 50 -
75 ohms) is not going to make any appreciable difference to the received signal.
Receivers have, as a rule, more than enough sensitivity to overcome that slight
mismatch.
The idea of that mismatch being a problem comes from, as you indicate, the
problems that occur when transmitting. Receiving is a different ballgame,
and the mismatch simply doesn't matter to the scanner.

Check out Durham radio, at www.durhamradio.com. They have Pro-2006
scanners for $379 U.S. The prices that they show are in Canadian
dollars and U.S. dollars. I just ordered one not too long ago and had it in
four days. Visit the web page, get there phone number or address and give them a
call, they accept Visa or Mastercard. These scanners are BRAND NEW and
come in the original box with the manual. They have also took the liberty
of restoring full 800 Mhz for you.

: >> > he calling another girl or discussing our date with a friend . I am not
: >> > totally paranoid but it is worth it for me to know .

If you don't trust the guy, why not just dump him? You obviously don't
have a very good relationship with him if you feel threatened by the fact
he picked up his phone after he left you. Next time you go out with him,
why not just ASK him who he was calling? If he's reluctant to tell you,
you don't need to be with him.

: >> >
: >> > If the technology is there why not use it
: >> >

Nope. Although you can, with some effort, find a scanner which picks up
the "cellular band", it is next to impossible to be able to listen in on
a particular person's phone calls at will. All those cellular-capable,
or modified, scanners will do is pick up phone calls totally at random.
You have absolutely no control over whose call you pick or even how long
you get to listen to it.
```

I am considering an AR2700 scanner. I have reviewed the web page and read several reviews but I am looking for real owner feedback regarding performance.

I know it has several birdies but are they really that bad?

How is battery life?

Does the radio it seem to be rugged?

If you have computer control, are you happy with it?

What are your likes and dislikes about it?

Considering the price range, is anything else available that is better?

Thanks in advance for your advice...

Nick

Hi Tim,

I think you may be getting an image. Can you check out 469.3875 for the same McDonalds? This makes more sense than 490.7875, which is allocated to LJ (Trucks) LR (Railroads) and LU (Buses). If you do find them on 469.3875, then the headset (input) frequency should be 464.3875.

Can you please verify this when you get a chance?

Thanks,
Bob

Hello, reference your request. Here a couple of ideas to try. Stop by at the airport and try to determine if they are going to have their own counter space or if sharing with another airline. Next try to determine which gate they may be using. Check that gate number to see if anyone else is using that same gate. If so, determine who that is and check out the freq they are currently using. A lot of times if the new carrier is not setting up shop in a big way they will pay for ground work from an airline that is already there and willing to do it. If you need the current freqs, let me know and I will send you what I can find. Good Luck... Scott from WI

Depends on which country. I am not too familiar with import to the
states since I live in Sweden. However I do all my scanner shopping
from the states and in some instances from the U.K.

Why bother going abroad when you already live in the best country for
buying scanners?

Rickard.

Most of the time, when a rec.* newsgroup is created, the corresponding
alt.* newsgroup is phased out. Indeed, many servers have dropped
alt.radio.scanner (mine is read-only on this newsgroup, and aliases
postings to rec.radio.scanner when reading). For some reason, this one
won't die.

Adam... Don't know how many responses you are going to get but I will throw in my 1 to 2 cents
in worth.....

Anyways.. Why go in and modify a radio with a hot iron on such small parts??? could be trouble
...hehe... well I know that is not much help...But thought I would throw that in....

Anyways...there is a software mod you can do that will fix that radio..not sure how much it will fix though...

Lets see... hmm... If I remember quickly I think that if you have the radio
turned off, then hold down the PRG , LOCK , (and some other key..can't remember...)
and this will RESET YOUR MEMORY!!
SO, TAKE NOTE THAT YOUR MEMORY WILL BE RESET WHEN YOU DO THIS!!!!!
What this will cause is that radio will have the test Freqs put into memory
and you will see 66 MHz , 72 MHz , 888 Mhz and some others... What you need
to do is Put 888 in mem 100
put 72 in mem 99
and then you will be able to scan these areas , however when you go above or below a certain Freq, you will not be able to access that band unless you do another
search from that Mem/Freq.

I hope this helps out... I think I got this mod in a TXT file if you are interested
on disk...somewhere and its a old file but it will work with the 51 from what I have
been told. And it is a complete doc on how to do it and what to do.

Anyways..hope this helps...Jess...<KC5LOS>

>mast.. I'm running 50' of RG58/U 20 AWG coax to my basement..
>...splitter?

Rick,

At 860MHz, 86% of your signal is LOST thru 50' of RG-58/u coax.
at 460MHz, 74% "
at 160MHz, 52% "
at 50MHz, 33% ".
(before it even gets to your scanner)! = Big ouch!

If you 'split' the remainder of the above signals, that will cost you
another -3db = Oouch! No way I know of to avoid that loss.

Get new coax (9913 or RG8 is the second choice) ASAP! Better coax is the
better choice for the following reasons:
*Amplifier noise is not introduced on top of low power signals.
*No power requirements
*The cost for new coax is about as much as a new amplifier.

Please note that if you place the amplifier at the end of the coax run, you
have already suffered the 'insertion loss' of the coax (see list above)!
You cannot amplify what is not there.

If the signal is 'noisy' at the input of the amp, it will be noisy at the
output, just stronger. Or, noise in = noise out.

Hope this was not too technical.

By all means, get the TV antenna because it will be more usefull.
UHF/VHF/FM is better than FM. Most TV antennas provide the splitter in
the box.

I am selling my last (my original) programmer for Motorola Bravo pagers. This portable unit will program capcodes (and various options) in the Motorola Bravo pagers, on both pocsag and golay formats. This unit is mint and operates on 6 - "AA" batteries for field use.

I have original receipt and instruction manual. Original cost was $350.00. Selling now for $225.00. [I'll pay for shipping.]

Please reply e/mail for any additional information and instructions.

These units sell quickly so don't delay!

That is a pretty good philosophy. It takes a pretty arrogant user to presume to decide for EVERYONE else just how worthwhile a particular piece of equipment may be. I have an R-1. Does it have shortcomings? You bet! Do I want to get rid of it No! I might prefer to use my AOR-8000 in many situations or my PRO-43 in a few others, but I find some value in the R-1 despite it's limitations. The problem with these "public spirited know-it-aklls" is that they suffer from some kind of personality deficiency disorder and have to attempt to make up for it by ranking on something someone else likes.

Actually, the Yupiteru is a piece of history since it was never
type approved. The importer just put the FCC approval sticker on without
approval.

The Yupi is a good radio, but also outdated by the Ar8000.

Regarding fast food freqs, ever notice:

1) Some customers must be fast food junkies, i.e. frequent many fast food places, because they order the wrong food such as nuggets at Taco Bell.

2) Women always get chicken, but don't pass up the frys.

3) What is it with guys in jacked-up trucks? They always sound like they have single digit IQs and for some reason get bacon on their burgers.

For you California readers:

MS>information on the AR3000 please send my way...e-mail or post.

MS>BTW, I have the original AR3000. I like it so far...

MS>Thanks

You didn't mention if you have a 3000a or a 3000.

I have never seen any mods on this scanner since it is continuous
coverage out of the box, scans damn fast, and is very programable.
Thus, the number of hackers playing with the 3000/a are small.

This scanner is a pain without a computer to run it or at least program
it.

I beleave its called I-TAC and I-CALL

I-CALL and 4 I-TAC tactical channels.
I'm In Canada and the same frequencies you are talking about I think
are common between both canada and the USA also.

I have them listed in my web page.

Is anyone using their am/fm antenna for their mobile or portable scanner? I'd like to know if this method gives good results. I've ruled out mag mounts and glass mounts. It's a pain to put the antenna on and off, and I'm sure mall rats would leave the glass one alone. If the factory antenna and a converter don't work well, I'll put one through the roof. Thanks for the reviews.

"Mark S. Conway" <mconway@mail.nantucket.net> wrote:

>I am using the PRO-2035 w/ the Universal M-400.
>In ACARS mode, I'm not receiving anything, please help ....

Do you have the M-400 interfaced to the headphone jack? If so, is the volume set to about 1/3 to 1/2 rotation? Otherwise, I assume you are connected to a record out jack.

Have you used the M-400 with this scanner before on other modes?
Do you know this hardware combination works?
Is your M-400 new enough to have ACARS support built-in?

Is the scanner set to 131.500? (Assuming you are in the U.S.)

Is your squelch open?

Are you anywhere near a major airport or airway?

Are you using an external antenna?

I know, some of these are dumb or obvious, but I can get ACARS just fine on a cheap Pro-2026 26 miles away from an airport (Aircraft side is solid, ground side only with an external gain antenna) with an internal whip antenna using the AEA ACARS package. If you can hear reasonable data bursts on the right frequency, you should be able to catch some.

These bursts may be few and far between during some portions of the day or in some locations. They are not necessarily a continous string of data bursts.

Steve

>prevents that from happening?

Not to worry. FCC type acceptance requirements for any new phone (even cheap 49 MHz analog phones) specify that a security code system be used to prevent someone else from being able to access your phone line through your base unit.

Your real concern, as I am sure you ahve already heard, should be the privacy of your conversations and performance. Any voyeur with a cheap scanner can intercept a standard FM cordless phone call. You should consider going to 900 MHz and going digital. I would recommend spread spectrum. When looking for a spread spectrum phone be sure it says "spread spectrum" (you would be surprised how many dummies at your local stereo super store don't know if the are selling s.s. phones or not).

I like spread spectrum for two reasons. Security and performance. I have an Escort 9600 direct squence s.s. phone and love it. It essentially has two levels of encryption. The analog signal is converted to digital, then scrambled (no speech inversion or other analog encryption that degrades sound quality). Then the digital signal goes through the spread spectrum radio. Spread spectrum is a form of modulation that essentially adds another layer of enryption. I have yet to hear any scanner enthusiasts claim that they have intercepted s.s. phone conversations.

I have never had any interference (within the usable range of the phone) in the 5 months or so I have been using the Escort. It is reliable even a few hundred yards from the house with the base unit on the ground floor.

There are two types of spread spectrum. Direct sequence and frequency hopping. I think the jury is still out on which is better. I only tried one freq hopping phone, a Uniden. I did not like how the audio seemed to get distorted when both sides of a conversation spoke at once. However I do not know if that is a function of the radio design or digital audio side of the phone.

The Escort 9600 is a direct sequence s.s. phone. It is kind of pricey and does not have any real bells or whistles (no base unit dial pad, speaker phone or intercom). But it is a solid performer.

A note about privacy. No cordless phone conversation is guaranteed to be 100% private. But s.s. gives you privacy from just about everybody but the government (but hell, they can just as easily tap your wireline and listen to EVERY phone in the house - and they aren't after your credit card numbers anyway...they already know them! ;)).

717. MacDonald Instruments

For cordless any scanner would do that covers the appropiate bands, the frequencies for different brand phones are posted in this newsgroup every so often.

For cellular, general listening, a scanner would do. But for one persons phone an Oki 900 modified for MIN specific eavesdropping would be the ticket.

Of course all of the above is illegal, in the United States, so I would suggest asking the guy, or getting another boyfriend.

719. Re: Indoor Ant performs better than outdoor?

Newsgroup: rec.radio.scanner
Date: 1996-04-09 00:00:00 UTC
From: Dtec@bga.com
Message-ID: <4kchmu$10sg@news3.realtime.net>

In article <4k1iq0$67i@cnn.isc-br.com>, braymon@llake-fs3.isc-br.com (Bob Raymond) says:
>
>I recently purchased a Radio Shack discone antenna for scanning
>purposes. Much to my surprise, I found that my indoor antenna worked
>better. I checked the cable and connectors, which are all new and even
>checked vswr which was essentially flat across the desired frequency
>range. I'm using a Bearcat BC8500XLT scanner.. I wonder if this is
>just an impedance mismatch? Tried using a tuner in line and the
>reception improved somewhat, but needed to be touched up depending
>upon what band I was monitoring. I am using 50 ohm cable (RG58) which
>is supposed to be a match for the antenna, but I can't find any specs
>on what the expected impedance is for the Bearcat scanner?
>If it is 70 ohms then that would explain this..
>
>
>Any scanner experts have ideas on what might be causing this?
>
>
>I'm by no means an expert, I have the same problems. I had the
unit hanging on a door in the house and got better reception than
when I put it on the roof. I used a 25 foot section of RS-58 and
got fair pick up. Moved it to the roof on 10 foot stick, using 40
foot rg-58, reception,,,,,not good. I will mention that I've heard
that the rat shack will not pick up the lower freq's well because
it doesn't have the vertical member. I listen to SW all the time and
the unit picks up pretty good here in central Texas.

Looked at the specs on the RG-58, 50 ohm, and looked at the specs on
RG-59, 72 ohm, decided to give it a try. I haven't noticed any
improvement. Seems my Rubber Ducky picks up ham better than the
RS......Thinking about bring it back into the house, or trying another
type of cable. I live in a hole and some freqs are hard to pick up.

I've read pro and con's about what type of cable to use and the verdict
is still out. I don't think the RS ant. is that great, least not for
Ham....

Hope this helps......

720. Freqs for Birmingham, AL

Newsgroup: rec.radio.scanner
Date: 1996-04-09 00:00:00 UTC
From: Coffin@worldnet.att.net

It's part of the built-in idiocy of ECPA that monitoring some frequencies is only illegal if the frequency is being put to a certain use. To be able to tell if a media frequency is being used for two-way dispatch operations or for Part 74 broadcast remote ops requires listening to the frequency to see what's going on there, as well as enough expertise to know the difference.

Yes, there are input and output frequencies, but not in the frequency range
that you were discussing. The input frequencies for cellphone repeaters are 45 MHz
BELOW the output frequencies. Inputs for the 869-894 MHz cellphone band are found
in the 824-849 MHz band, not from 896 to 915 MHz. If you're hearing cellphones up
at 900+ MHz, those are indeed images, not inputs.

My experience has been similar. If you want to talk about a turkey, let's talk about the AOR1000. I bought one and couldn't get rid of it fast enough. Yet, the R-1 I have, while costing a bit more than the 1000, is very sensitive on all of the bands I scan, has a nice squelch action, is very flexible as far as scan modes goes, has a nice choice of steps, hasn't been an overload problem here in N. Idaho, fits in my shirt pocket with just the built in nicad battery, etc.

I might warn people about the 1000 if asked, but I don't make it my life's mission to keep anyone from buying one -- many people that use them are willing to forgive their lack of sensitivity, lack of squelch action, etc., for what they get. So it is with the R-1, which has plenty to offer.

733. Pro-46 WFM Possible?

Newsgroup: rec.radio.scanner
Date: 1996-04-09 00:00:00 UTC
From: digint@wspace.stu.rpi.edu
Message-ID: <497cc$454.ff@usinternet.com>
Source record: 236689

Is it possible to mod (presumably permanently) the Pro-46 to pick up WFM?

I'm willing to really go at it with the old iron, replacing IC's and such, but I don't even know if it's possible or what mod to make.

I presume I'ld be modding the IF filter in/out on IC 401, but not sure what to do beyond that.

Well, if anyone knows if it's possible.. or better yet, how to do it, please let me know.

Thanx
-DI

FCC rules have specific limitations on such devices. Antenna length, and power output are just two, however, some companies DO offer external (outside) antennas for cordless phone use.

The antennas are often nothing more than CB antennas with the elements cut down in length to optimize operation at 49MHz. One must also be aware that cordless phones restricted to very low power levels, coax runs must be kept to a minimum.

While I have no experience doing it, I suspect that 900MHz cordless phones would be a better choices as high gain antennas are very effective and small.

After re-reading my post, you may simply require a Coaxial Switch, where a know selects antenna "A" or "B".

Some models offer five and more inputs, one selected output.

Use the above when you have more than one coax/antennas from outside.

You may wish to experiment with a two-way splitter, where two antennas are mixed into one output? This may be very effective where you have a beam antenna focused at a given point/station for maximum reception and a omni-directional antenna for all other not-as-important signals. This is NOT meant to imply that your beam will receive only one signal.

Don't forget that when one inserts a 'splitter' into a coax system, there is always loss thru the device.

Enjoy!
Uncle T.

BUYING A USED SCANNER RADIO

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. Free distribution is encouraged.]

Abstract

This article contains product review summaries for more
than 60 old and new scanner radios and monitor receivers.
Other topics include:

1. Motivation for buying a used scanner
2. A used scanner may be a broken scanner - where to get
it fixed
3. Evolution of the scanner
4. Obtaining crystals
5. Keyboard programmable scanners

Introduction

Anybody with enough money can buy a brand new scanner, but
you can save lots of money if you get a good deal on a used
scanner. Hamfests are probably the best place to find used
radios, but you must be familiar with the equipment.
Hamfests are repleat with older radios you won't see in
today's catalogs.

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. I purchase

most of my receivers at hamfests or horsetrade with other radio hobbyists. This article describes a few of the FM receivers in my collection, and is not meant to be complete.

A Used Scanner May be a Broken Scanner

Getting a bargain is not without some risk. I have had sellers look me square in the eye and tell me their radio worked fine -- when it really didn't.

Buying a used portable scanner is riskier than buying a mobile or base model. Portable scanners are subject to more physical abuse and many have been dropped. If a radio has been dropped, the laws of probability dictate that the first point of impact was probably a corner, so be sure to examine each corner for evidence of trauma.

Scanners used in mobile service are subject to vibration, dust, and temperature extremes. This shouldn't dissuade you from buying a used mobile scanner, but be aware of possible complications.

You should have some recourse if the radio you buy turns out to be defective. For hints on fixing older Bearcat | base scanners, see "Tips for Fixing Bearcat Scanners," by | Bob Parnass, AJ9S, in March 1996 Monitoring Times magazine.

If you can't fix the radio yourself, you can pay to have the manufacturer or a service clinic repair it for you. Grove Enterprises (Brasstown, NC) and Radio Shack repair scanners, and Uniden can repair newer Bearcat models but often refuses to service older models, claiming they are | "unrepairable" and carving the letter "U" on the cabinet. G & G Communications (telephone 716-768-8151) is a family owned company which repairs scanners and stocks parts and crystals for several older models. They usually don't repair AOR scanners due to lack of manufacturer support. They are located at 9247 Glenwood Drive, LeRoy, NY 14482.

Evolution of the Scanner

It helps to understand some scanner history before shopping for a used scanner. You will likely see radios from many

(Continued from previous message)

vintages at a hamfest, and should avoid buying early units unless you are a scanner collector.

One of the earliest ancestors to the scanner was the converter. Manufactured by Tompkins (Tuneaverter), Petersen, Bearcat (Lil Tiger), Midland, and others, converters were made to operate in conjunction with AM radios. Then came wide band monitor receivers, in both tunable and crystal control models, like the Radio Shack PRO-2B. Truthfully, converters and tuneable FM receivers are interesting but don't work well by today's standards.

While tuneable receivers were in vogue, solid state technologies supplanted tubes. Better performing, narrow band crystal controlled units, like the Sonar FR-105, followed. These units did not scan, rather channel selection was accomplished using a simple rotary switch. Sonar even made a 24 channel unit, model FR-2513, in which crystals were held in a rotary "turret."

The earliest scanners, like the 1968 vintage Bearcat BCH, BCL, and BCU models, did not provide individual channel lockout capability. Electra didn't use the term "scanner" and instead called these innovative radios "business receivers." Other models, like the SBE Sentinel, employed a "Channel 1 Bypass" switch so a user could lockout channel 1.

The first scanners came in single band models, followed by multiband models. As two-way radio users started to populate the 450 - 470 MHz band, consumers were forced to pay a premium for UHF scanner coverage. Some multiband scanners, like the Electra's Bearcat III, required an optional circuit board for each band.

There were scanner mutations, designs which never evolved -- odd combinations of AM broadcast receivers with VHF-FM receive capability, like the flamboyant turquoise Sonar Sentry FR-103 portables, Electra's Jolly Roger, and GE's Surveyor series. Lafayette Radio Electronics offered a few CB transceivers with VHF receiver capability. These poor

performers didn't interest consumers of that era and you should avoid these models unless you are a scanner collector.

The first programmable (crystal-less) scanners were difficult to program. Users had to look up frequencies in a code book and tediously program the information into the scanner in binary form. Some models, like the Bearcat BC-101, Radio Shack COMP 100, and Tennelec MCP-1, resembled Altair or PDP-8 computers, with a row of 16 or so toggle switches. Instead of toggle switches, the Regency WHAMO-10 was programmed by breaking teeth from metal combs. The SBE Optiscan (and its Sears clone) required poking a series of holes in plastic cards which were then inserted into a slot on the front panel.

Keyboard Programmable Scanners

Both Bearcat and Regency, as well as Radio Shack offer some good models. I would avoid the Bearcat 100, and older scanners made by AOR, JIL, Fox, Tennelec, and Robyn.

Scanner features often differ not only by model but by manufacturer. For instance, most Radio Shack and Bearcat programmables allow enable/disable of the delay function on a per-channel basis. Older Regency units permit the delay to be enabled/disabled only globally, that is, for all the channels at one time.

Radio Shack scanners contain a reasonable number of features. All the older Radio Shack scanners were made by General Research Electronics (GRE). Uniden began making scanner models for Radio Shack in the late 1980s, and now supplies about half the Radio Shack scanners. The older GRE-made models scan a bit slowly and have a higher level of synthesizer noise. Most have too much hysteresis in the operation of the squelch control, but this can be fixed completely by replacing one resistor. Good, detailed shop manuals are available for Radio Shack units for $5 - $12.

In the name of cost cutting, some models have done away with the concept of a "channel bank", i.e. the ability to select/deselect a group of channels at a time. The bank concept was a good one. It may be inconvenient to operate a 30 channel scanner without banks (e.g. Regency MX3000, HX1000) if you operate the way many scanner hobbyists do.

If you want to buy an American-made scanner, you will have to buy an old model. Until the mid 1980s, rivals Regency | and Electra (Bearcat) built most of the scanners in their | Indiana and Puerto Rican factories. Uniden, a large | Japanese electronics company, purchased the scanner product |

lines of both competitors and moved production to Asia.

(Continued from previous message)

My favorite VHF/UHF receivers are the the Uniden/Bearcat |
BC9000XLT, the 400 channel Radio Shack PRO-2005 and PRO- |
2006, and the ICOM R7000 and R7100. The ICOM models are
more "communications receiver" than a conventional scanner.

For portable use, I prefer Uniden/Bearcat BC3000XLT and |
older Radio Shack PRO-43.

Obtaining Crystals

If you do purchase a crystal controlled scanner or monitor
receiver, you will probably want to buy more crystals to
cover local frequencies.

Scanner crystals may be ordered from your local Radio Shack
store or from one of the companies below. Be sure to
specify the operating frequency you want and the brand and
model of scanner.

Some companies may ask you to send a schematic of the
scanner or require more detailed information, like series
or parallel resonance, load capacitance, etc.

American Crystal Co.
1623 Central Ave.
Kansas City, KS 66102
tel. 913-342-5493

For more information about old scanners, see:

1. "Confessions of a Scanner Collector," by Bob
Parnass, Monitoring Times, August 1988.

2. "Scanner Collector Primer," by Bob Parnass,
Monitoring Times, May 1995.

I have published full length reviews of these recent
scanner models in Monitoring Times magazine:

Jan 1995 - Radio Shack PRO-2035 vs. Radio Shack PRO-2006
Feb 1995 - Radio Shack PRO-62 Portable
Mar 1995 - Uniden/Bearcat BC9000XLT
Apr 1995 - Uniden/Bearcat BC3000XLT Portable
May 1995 - Uniden/Bearcat BC860XLT
Jun 1995 - Uniden/Bearcat BC890XLT & Radio Shack PRO-2036
Jul 1995 - Radio Shack PRO-2037
Aug 1995 - Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT
Sep 1995 - Radio Shack PRO-60 Portable
Oct 1995 - AOR AR-2700 Portable
Nov 1995 - selected AOR AR-8000 measurements
Dec 1995 - Radio Shack PRO-2040
Feb 1996 - Radio Shack PRO-2042
Apr 1996 - Uniden/Bearcat BC220XLT, BC230XLT Portable |

Note: Reprints of Monitoring Times articles are available
for $2.00 each (plus self addressed stamped envelope) from
Grove Enterprises, PO Box 98, Brasstown, NC 28902, tel.
(800)438-8155. I don't receive any part of this $2.00.

Subject: WTB - Good Used Scanner

(Continued from previous message)

operate. Good first scanner.

M100: 10 channel unit. Same as MX3000 except different color and fewer channels. Nicely lit keyboard, but may cause RFI into nearby SW receivers.

HX1000: Good, fairly rugged, 30 channel handheld synthesized unit. Generous out of band coverage but no AM aircraft coverage. Built by Azden. Very sensitive on UHF, but annoying audio hiss leaks through speaker when squelched. Belt clip chintzy, but can be directly replaced with better clip from Kenwood TR2600A. Like the MX3000, all 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Low discount price makes this best choice for programmable portable.

HX650/H604: 6 channel crystal portable. Likely made by Sanyo. Same as Fannon and Bearcat Thin Scan units, (except that Bearcat has 10.8 MHz IF frequency, and is harder to get crystals for), but scans faster. Small size and common crystals (available at Radio Shack), make this 1st choice for bare bones portable scanner.

Radio Shack

PRO-2004: 1986 vintage. Top of the line, wide band scanner for 1987. After a diode is cut, enjoy continuous coverage from 25-520 and 760-1300 MHz, AM, NBFM, and WBFM. Has 300 channels in 10 banks of 30, backed up by conventional 9 volt alkaline battery. Any channel can be designated the priority channel. Scans and searches fast. Lots of well designed features, like 10 pairs of search limits, Lockout Review, default search increment and emission mode. Sound Squelch allows skipping dead carriers during search or scan. Metal cabinet, good internal construction and shielding, but no mobile mounting bracket or DC power cord. Soft touch membrane keyboard. Good sensitivity and selectivity. Very good radio. See "Product Review: The Radio Shack PRO-2004 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, February 1987, and

Monitoring Times, March 1987.

PRO-2005: 1989 vintage. Essentially a size reduced PRO-2004 with surface mount components and 400 channels. Some people think the small knobs, smaller display, and plastic cabinet are a setback from the 2004. The smaller size, real rubber keyboard, and vertical front panel make it easer to use mobile, although there is no mobile mounting bracket available and the keyboard is not backlit. More sensitive than the PRO-2004 but 800 MHz signals leak through into the commercial aero band. Highly recommended. See "Product Review: The Radio Shack PRO-2005 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, June 1989, and RCMA Journal, August 1989.

PRO-2006: 1990 vintage. Essentially the same as PRO-2005 but scans faster. Probably the best scanner made to date. Highly recommended. See "The Realistic PRO-2006," by Bob Parnass, AJ9S, in Monitoring Times, October 1990.

PRO-2035: 1995 vintage wide coverage base made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. Broader IF selectivity than PRO-2006. Poor dynamic range. 10 linkable search banks. Dumb Auto Store feature stores the same frequencies over and over. Wastes time scanning empty channels. See "The Radio Shack PRO-2035 - How Does It Compare With the PRO-2006?," by Bob Parnass, AJ9S, in Monitoring Times, January 1995.

PRO-2040: late 1995 vintage 100 channel base made by Uniden. Fair performance, but minimal image rejection. Local oscillator harmonics account for spurious responses, e.g., reception of cellular telephone calls in the 460 MHz UHF-high band. Scans over 40 channels/sec. Can lock out up to 50 channels from search. "Soft" on/off power switching via keypad. See "The Radio Shack PRO-2040," by Bob Parnass, AJ9S, in Monitoring Times, December 1995.

PRO-2042: 1996 version of the wide coverage PRO-2035 base with improved firmware and amber display. Made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. NFM selectivity is still a problem but improved over PRO-2035. 10 linkable search banks. Smart Auto Store feature stores the unique frequencies. Can lock out up to 200 frequencies from search. Query facility indicates if and in what channel a frequency is programmed. Scan skips over empty channels automatically. Can sort memories by frequency within a given bank. IFs are 609 - 612, 58.05, and 10.7/0.455 MHz. Broader IF selectivity than PRO-2006. Overall, a top grade scanner and second only to Uniden/Bearcat BC9000XLT. See "The Radio Shack PRO-2042," by Bob Parnass, AJ9S, in Monitoring Times,

Source record: 236451

To: GRAHAMA@MAGI.COM
Subject: WTB - Good Used Scanner

(Continued from previous message)

February 1996.

PRO-34: Portable scanner with 200 channels and 800 MHz coverage. Ten "monitor" channels. Operates from AA cells. Slow scanning, low audio output, and chintzy plastic case detract from an otherwise good performance. No decent leather case available from Radio Shack. If you need a portable with 800 MHz, get a Bearcat 200XLT. If you can't get a 200XLT, get a PRO-34.

PRO-2021: Base/mobile scanner. 200 channels in 10 banks, LCD display and raised rubber keys. Lots of memory but scans too slowly and lacks 800 MHz. Ten "monitor" channels. Radio Shack seemed to have an overstock of 2021s as they were on sale for such a long time. Close out price dipped to about $200, which made it a nice scanner for beginners.

PRO-2022: Base/mobile scanner. Like the PRO-2021 but includes the 800 MHz band. Cellular images throughout the 847.6 - 869 MHz range. Includes power saver circuit, odd for a base unit, which can clip the first part of a transmission.

PRO-2036: Same as Uniden/Bearcat BC890XLT. Tuning knob. 200 channels, global delay. Scans and searches fast. Count, AUX, and Auto Store features. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IFs -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

PRO-2037: 1994 vintage. Triple conversion all plastic base scanner made by GRE. Home version of the PRO-62 portable but with more intermod. 200 channels in 10 banks, one search bank, selectable AM and FM. Uses up conversion circuitry but inadequate front end filtering still allows images, though not as bad as in 10.7 or 10.8 MHz IF circuits. Crisp, respectable audio given the top mounted speaker. See "The Radio Shack PRO-2037," by Bob Parnass,

in July 1995 Monitoring Times.

PRO-2001: Early, single bank 16 channel programmable. Reasonable coverage of the 3 traditional bands, minus aircraft band. LED digital display as well as an LED per channel. Mechanical lockout switch for each channel. Delay is either on or off for all channels at a time. High synthesizer noise level. Troublesome plated through holes on digital board in some units renders radio virtually unfixable. Could never get mine to work more than a few days in a row; always another bad connection. Some owners have no trouble.

PRO-52: 8 channel VHF-Lo/Hi base unit. No UHF band or provision for mobile operation. Good little scanner despite limited frequency coverage and Spartan lack of frills. Crisp squelch action and good audio, helped by a front mounted, vertical speaker.

PRO-2003: Radio Shack's 1986 top of line. 50 channels + 10 FM commercial broadcast band channels. Includes aircraft. Good frequency coverage and functionality, but at a high price. Poor human engineering: difficult to read keyboard makes the PRO-2003 hard to operate unless in a well lit room. Keyboard label coloring improved on newer units. Rather slow scan rate and high price. Although there are provisions for 12VDC operation, the cabinet shape and lack of mounting bracket makes mobile operation impractical. Scan rate only 8 channels/sec vs. 15/sec in Regency and Bearcat. Causes RFI: Plastic case permits scanner to radiate signals into nearby receivers.

PRO-43: Very good portable made by GRE. First Radio Shack portable with up conversion, and 222 MHz ham and 225 - 400 MHz military air band coverage. 200 channels, single search range. Small, convenient size. Muffled audio. Speakers in early units known to fail and more powerful speakers were used in later units. 800 MHz band coverage fully restorable in early units by removing diode. Uses same 6 cell battery tray as other high end GRE portables. Subject to interference in 160 - 162 MHz range.

PRO-60: 1995 vintage. Very good portable made by GRE. 200 channels, single search range. Similar features and same IFs as the PRO-43 it replaced but the PRO-60 has wider frequency coverage and crisper audio. Covers 75 MHz and commercial FM broadcast bands. Improved Direct search can be stepped manually in single steps. Uses same 6 cell battery tray as other high end GRE portables. Railfans take note -- the PRO-60 and PRO-43 are subject to interference in 160 - 162 MHz range. Draws 100 mA while scanning. See "The Radio Shack PRO-60 Portable," by Bob

Parnass, AJ9S, in Monitoring Times, September 1995.

Source record: 236452

To: GRAHAMA@MAGI.COM
Subject: WTB - Good Used Scanner

(Continued from previous message)

PRO-26: 1985 vintage. Very good portable made by for Radio Shack by Uniden. 200 channels, very fast scan/search. Good display. Covers all TV channels, but spectrum adjacent to cellular phone band is censored which prevents monitoring parts of some trunked systems (e.g., IL State Police district 4). Up to 50 frequencies can be skipped during search. Limited image rejection causes 929 MHz paging interference in 170 MHz range. IFs are 380.7/254.4, 58.075, and 5.5/0.455 MHz. Audio suffers from small speaker. See "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

PRO-62: 1984 vintage. Good portable 200 channel scanner using up conversion. Similar to PRO-43 but no military air band, different upper frequency limit, and slightly different IFs. Selectable AM/NFM modes. Better intermod immunity than PRO-43. See "The Radio Shack PRO-62," by Bob Parnass, AJ9S, in Monitoring Times, February 1995.

PRO30: 16 channel programmable portable with aircraft band. Good frequency coverage. Extra controls on top allow control of SCAN, MANUAL, and PRIORITY functions while worn on belt. Good belt clip. Low audio output. Plastic case prone to break at BNC antenna connector under severe use, vs. metal frame in Regency HX1000. High price, no discounts or sales yet. I had 6 or 7 PRO30s, having to return them several times during the 1 year warranty, although other owners have had little or no trouble. Troubles included oscillation in IF stage, no UHF band reception, case broken around base of antenna connector, etc.

PRO-24: 1983 vintage. Only 4 channels in this crystal controlled portable. Covers the three basic bands, but no aircraft. Easy to obtain batteries and crystals. Characteristic Radio Shack squelch problem, fixable by changing one resistor. All-plastic case larger than Bearcat Thin Scan and clones. See "The Radio Shack PRO-24 Scanner," by Bob Parnass, excerpted in the "Technical Topics" column, RCMA Newsletter, February 1984.

Craig (division of Pioneer)

4530: Japanese 10 channel crystal controlled 3 band unit. Also available under Plectron name but in different cabinet. No aircraft band. Deluxe features like priority, trimmer capacitors for netting each channel, front panel speaker, and rugged metal cabinet make this unit a winner. Channel lockout slide switches have finite life. Replacing burned out incandescent channel lamps not fun. Grab a 4530 if you find one in good condition.

Sonar:

Sonar made several crystal controlled scanners and channelized monitor receivers which shared the same RF circuitry. Each radio was housed in the same size metal case and worked on both 120 VAC and 12 VDC. The models differed in the number of channels, the band coverage, and whether individual channels could be locked out.

Although they used a 10.7 MHz first IF, Sonar radios require parallel resonant crystals different from the common series resonant crystals used in Regency and Radio Shack scanners. Some Radio Shack crystals will work in Sonar units, but more often they oscillate a few kHz off frequency and are unsuitable unless changes are made to the oscillator circuitry. Therefore, beginners should avoid these radios. Typical Sonar squelch has long time constant causing a long noise burst at the end of each transmission.

FR-104, FR-105: 6 channel monitor receivers covering 25 - 50 MHz or 150 - 175 MHz. Manual channel selection, i.e., no scanning. Early models are identified by an 11 pin connector on the rear and they could be used with an optional NiCd battery pack and charger which bolted to the rear panel. Later models used Cinch Jones connectors with flat contacts. Optional tone decoder board.

FR-2512, FR-2513: 24 channel versions of the FR-104 and FR-105 monitor receivers. Manual channel selection, i.e., no scanning.

FR-2514, FR-2515: 8 channel scanners. Channel 1 priority. Recommend you avoid these models as there is no way to lockout a channel from the scan sequence.

FR-2526, FR-2526, FR-2528: 10 channel scanners covering various combinations of 3 bands. Each channel could be

FR2528 10 X X yes yes

Table 1. Summary of Sonar base/mobile monitor and scanner receivers

Tennelec

Manufactured the first synthesized scanners. Company went out of business several years ago. Schematics and parts difficult to obtain. Radios reputed to be poor performers. Got my MS-2 and MCP-1 basket cases for free and sometimes regret taking them. Not worth fixing unless you have access to DTL/RTL chips and circuit diagrams.

Plectron and Motorola Alert Monitor Receivers

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola Alert monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola Alert crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. These radios are fixed channel units and do not scan. They can be powered form

117VAC or 12VDC with the proper mobile cord.

The audio quality on a Plectron P1 or 700 series is far better than any consumer grade scanner and the sensitivity and intermod immunity is outstanding if aligned properly. Better image rejection than most scanners (see article by Bob Parnass in Monitoring Times, January 1996 for comparison). The Plectron 500 series is less desirable. The Motorola Alert monitors are pretty good, although the audio lacks bass.

No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, and there were versions optimized for each portion of the band. There were different "split" models to cover segments of VHF-hi band, too. Although UHF versions were made, they are somewhat rare.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency. Too, the P1 and R700 require different crystals.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. For more information, see "Add a Crystal Receiver to Your Arsenal," by Bob Parnass, January 1996 Monitoring Times.

(Continued from previous message)

AOR

AR2700: 1995 vintage. 500 channel portable covering 500 kHz to 1300 MHz. Lots of good features, e.g., 10 linkable search banks, lighted keypad, per-channel attenuator, S-meter, battery meter, optional voice recorder and speech inversion descrambler. Global rescan and pause delays, but no auto store, data skip, nor battery saver. Internally generated noise results in broad birdies on AR2700 tested. Insensitive carrier operated (vs. noise operated) squelch stays closed on signals unless they are moderately strong, causing scanner to skip transmissions of interest. IFs are 287.55/749.25, 58.05, 10.7/0.455 MHz. See "The AOR AR-2700 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, October and November 1995.

ICOM

R-7000: 1986 vintage. At about $1000, this was once the top VHF/UHF receiver. 99 channel, multi mode coverage from 25-2000 MHz with a small gap at 1000-1025 MHz. Memory can be expanded to 198 channels by adding simple switch to pin 19 of memory IC8. Tuning knob lets you tune through parts of the spectrum much easier than using the SEARCH mode on conventional scanners. Selectable USB/LSB allows reception of new amplitude compandored sideband (ACSB) stations. S-meter doubles as discriminator meter to aid tuning. Useful search and store feature, reminiscent of the the Bearcat 250, searches between 2 limits and automatically stores new frequencies into channels 80-99. Audio and control interface for tape recorder. Noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Searches and scans slowly but can be sped up to about 12 cps by adding a resistor. Too big for permanent mobile use, but too nice to leave alone in the car. If you don't want to spend $1000, get a Radio Shack PRO-2004/5/6 instead.

R-7100: 1992 vintage. At about $1300, this is the Cadillac of VHF/UHF receivers. 900 channel, multi mode continuous coverage from 25-2000 MHz. The radio RF/IF/AF portions of

the R7100 are similar to the older R7000, but the R7100 is constructed using surface mount parts. Both the R7000 and R7100 are much more immune to intermod than the Uniden/Bearcat 760XLT and the portable PRO-43. The firmware in the R7100 is much more sophisticated. 9 banks of 100 channels. Further, you can associate each channel with 1 of 10 groups. Many possible ways to scan. 10 pairs of search limits. Search and store ("memory write") scan mode lets you store 100 frequencies instead of the 20 in R7000. Another R7100 improvement is that you can program up to 100 channels for the R7100 to skip while searching. R7100 has 2 VFOs ("windows"). Both the R7000 and R7100 scan slowly compared with PRO-2004 and PRO-2006, and that's a drawback. Both the R7100 and R7000 employ a noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Scanning a mixture of VHF and UHF frequencies serenades the Icom user with a very annoying clickety-clack, clickety-clack!

UNIDEN/Bearcat and Electra/Bearcat

Bearcat III (Electra): 1976 vintage. 8 channel crystal controlled scanner. Requires optional front-end circuit board for VHF-low, VHF-high, and UHF bands, but only 2 boards can be installed within the radio at the same time. Two crystal filters. No aircraft band coverage nor rescan delay. Front mount speaker sounds good. Strong local oscillator radiation often causes interference with other scanners in the same house.

Bearcat IV (Electra): 8 channel crystal controlled scanner. Newer version of Bearcat III but contains front-end circuitry for VHF-low, VHF-high, and UHF bands. Better selectivity than Bearcat III or 12 due to having three instead of two 10.8 MHz IF filters. No aircraft band coverage. Front mount speaker sounds good. No rescan delay.

Bearcat 5 (Electra): 1979 vintage. Eight channel economy base model covering VHF-low, VHF-high, and UHF bands. 117 VAC only. No track tuning. Black plastic cabinet.

Bearcat 6 (Electra): Six channel VHF-low and VHF-high bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 8 (Electra): Eight channel VHF-low, VHF-high, and UHF bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 12 (Electra): 1979 vintage. One of the last decent

(Continued from previous message)

crystal controlled scanners. 10 channels. Variable scan speed up to 20 ch/sec. Single delay on/off switch. Front mount speaker sounds good. Manual contains schematic. Single conversion, 10.8 MHz IF. Selectivity is poorer than programmable models, like the 300, allowing adjacent channel interference. Covers VHF-low, VHF-high, and UHF bands but no aircraft band coverage. Crystal positions must be arranged by band.

Bearcat 15 (Electra): 1983 vintage. Actually made for Electra by competitor GRE (General Research Electronics). The only Bearcat crystal controlled base/mobile scanner offering 118 - 136 MHz AM aircraft band. 10 channels.

BC101 (Electra): 1975 vintage. First Bearcat synthesized unit. 16 channels, no priority. Frequency programmed in binary by setting toggle switches on front panel after looking up code in code book. No frequency readout. Uses custom IC for CPU, now discontinued, so factory authorized service is no longer available. I have four of these units. DC operation requires optional mobile power supply.

BC100 (Electra): First programmable portable scanner. Be prepared for at least one repair in the first year. Early units, with threaded antenna connector, have high frequency of repair, particularly LCD readout, keyboard, and battery holder. No battery backup. Poor case design in early units caused battery to disconnect from radio, resetting microprocessor and clearing memories. No priority channel or aircraft band. Some people swear by the BC100, others swear at them.

BC220 (Electra): 1979 vintage. 20 channels. Reasonable number of features but 20 channels doesn't seem enough. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC20/20 (Electra): 1981 vintage. Similar to BC220 but with 40 channels and different CPU circuitry. A maximum of 20 channels can be scanned at one time. Reasonable number of features. Service Search for Marine and Aircraft. LED

readout. Good scanner, but tinny audio.

BC250 (Electra): 1976 vintage. 50 channel model, rich in features, but lacks aircraft band and 144-146 MHz. Search and Store feature extremely useful for finding federal frequencies. Clock. High frequency of repair. Power transistors not heat sinked adequately, causing heat damage to surrounding components and circuit board. Failure of Q204 on the feature board known to cause odd display readings. Digital circuitry very sensitive to glitches caused by static and AC line spikes. Avoid 1978 or earlier vintage units. All BC250s use custom ICs (e.g., IC6, a divider chip, mfd. by Exar), which are now discontinued, so factory service is no longer available from Uniden.

BC260 (Electra): 1983 vintage. Super heavy duty metal cabinetry and lit controls, aimed at mobile use for firemen, police, etc. Few frills, only 16 channels, no aircraft, but generous coverage of federal bands omitted in the older Bearcat scanners. Good sensitivity. Lots of audio. Good internal construction. Backlit keyboard allows operation in the dark, but the keyboards on some units require high pressure to operate. Brightness control for display and keyboard, but multiplexor circuitry for vacuum fluorescent display produces audible whine which may be annoying in a quiet room. Backlighting may fail in some units due to poor contact on connector used to fasten light panel to front circuit board. 9 volt regulator transistor Q28 (TIP29) may fail, causing blank display while leaving audio intact. Method of connecting an external speaker is awkward.

BC300 (Electra): 1979 vintage. 50 channel top of the line scanner. Service Search feature contains 11 ROM banks of preprogrammed channels. Switching power supply failure noted in early units due to insufficient capacitance - component value was changed in newer units. Schematics show at least 100 components changed between earliest and later units. Preset squelch pot, mounted internally on circuit board, misadjusted in new units - adjustment usually required after burn-in period. Good sensitivity. Built in clock. I leave it on 24 hours a day. This is a favorite.

BC350 (Electra): 1981 vintage. 50 channels in 5 banks. Includes aircraft. Used to be Bearcat's top of the line, overpriced scanner but never very popular. Dual use keyboard and display allowed 8 text characters to be associated with each channel, a feature clumsily implemented, and awkward to use. Units plagued with various hardware problems including bad memory ICs and

short life power transformers. Firmware bugs without
cures. The BC300 is a much better scanner than the BC350,

(Continued from previous message)

and at a lower price.

BC760XLT (Uniden): Also sold as BC950XLT through Scanner World. Small, mobile scanner supplied with mounting bracket and wall wart AC power supply. Some of the keys are backlit. 100 channels in 5 banks. Service search. Earlier version has Motorola type antenna jack and AA battery backup. Later version has BNC antenna jack and internal lithium battery. Can be fitted with optional CTCSS decoder. Hyper sensitive and easily overloaded by strong signals, especially when used with outdoor antenna in base applications. Conventional 10.8 MHz IF prone to images. Television audio heard in some places.

BC800XLT (Uniden): 1985 vintage. 40 channels in two banks. Covers 806-912 MHz, as well as of vhf, uhf, and aircraft bands. Receives 10 meter fm and all of 6 meters, as well as federal portions of vhf and uhf bands. Fewer birdies on vhf-lo band than other scanners. Scans and searches very fast. Clean, robust audio output. Extremely sensitive, but very prone to overload by strong signals when connected to outdoor antenna. Too much play (hysteresis) in squelch adjustment - can be improved by changing one resistor. Positive terminal in memory backup battery holder installed backwards in early units, allowing memory loss when scanner unplugged from AC outlet. Tunes in increments of 12.5 KHz on 800 MHz band, whereas cellular telephones are on 30 KHz channels. See "The Bearcat 800XLT ... an Owner's Report," by Bob Parnass, in Monitoring Times, March 1986.

BC860XLT (Uniden): 1995 vintage. 100 channel table top unit. Can lock out 10 channels during search. Good performer except for images. See "The Uniden Bearcat BC860XLT," by Bob Parnass, AJ9S, in Monitoring Times, May 1995.

BC890XLT (Uniden): Same as Radio Shack PRO-2036. Tuning knob. 200 channels, global delay. Count, AUX, and Auto Store features. Scans and searches fast. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IF -- lots of images and birdies. Prone to severe intermod,

especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

BC9000XLT (Uniden): 1995 vintage. High quality base using up-conversion. 500 channels in twenty banks. Up to 250 channels can be programmed with alpha labels. Tuning knob. Selectable AM, NFM, WFM modes. Optional CTCSS decoder. Very fast scan and search. Can lock out 50 channels during search. Delay and attenuator independently programmable for each channel. Effective Auto Store feature stores unique frequencies. Good RF section, but not as robust as PRO-2004/5/6. IFs are 380.7/254.4, 58.075, 0.455 MHz. One urban user, located within a couple of blocks of several high power transmitters, reports severe desense problems. See "The Uniden Bearcat BC9000XLT," by Bob Parnass, AJ9S, in Monitoring Times, March 1995.

BC100XLT (Uniden): 1987 vintage. Very good 100 channel portable with 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Generous coverage of conventional bands, including commercial aircraft, but no 800 MHz. Decent leather-like case. Slide-on 550 mAH NiCd battery pack.

BC200XLT (Uniden): 1987 vintage. Also sold as BC205XLT through Scanner World. Very good 200 channel version of BC100XLT portable scanner but includes 800 MHz band. 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Decent leather-like case. Slide-on NiCd battery pack. |

BC220XLT (Uniden): 1995 vintage. Very good 200 portable | scanner which is a smaller successor to the BC200XLT. | Includes 800 MHz band. 10 priority channels. Service | Search, including WX. Up to 10 frequencies can be locked | out during conventional search, 20 frequencies from Service | Search. Unique feature tells whether a given frequency has | already been memorized. 10.8 MHz and 450 kHz IFs, with | images 21.6 MHz away. 4 cell BP-120 internal NiCd battery | pack. Marketed as BC230XLT with two BP-120 battery packs | and CRX-120 dual charger. See "The BC220XLT/BC230XLT | Portable Scanner," by Bob Parnass, AJ9S, in Monitoring | Times, April 1996. |

BC230XLT (Uniden): See BC220XLT.

BC2500XLT (Uniden): 400 channel portable with tuning knob. Plagued by intermod and images. Early units drained batteries quickly even while turned off.

BC3000XLT (Uniden): 1995 vintage. Excellent 400 channel
portable with 20 banks. Up conversion. Very fast scan,

search, and intelligent Auto Store. Mode, attenuator, and delay settings programmable for each channel. 50 frequencies can be locked out during search. Larger speaker than PRO-26 produces better, crisper audio. See "The Uniden Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, April 1995 and "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

Regency

TMR series: First generation crystal scanners. Come in all varieties of band coverage. Models with both UHF and VHF bands must use separate antennas for each band (disadvantage in mobile installations, but can be overcome by connecting two front ends via a capacitor). Not sensitive enough to cover the entire 30 - 50 MHz range in a single model. There three versions of VHF-low band coverage depending on the part of the 30 - 50 MHz band covered (LL, LM. and LH). TMR scanners use unsocketed incandescent bulbs for channel indicators which require periodic replacement. Easy to crystal: Radio Shack crystals work well. TMRs usually $2 and up at hamfests, often in poor condition. Don't pay more than $50, even if mint. Front ends must be tuned for selected portions within the bands for best sensitivity. Wide IF selectivity troublesome in urban/suburban areas. Primitive digital scanning circuitry may become confused at times. but power off/on restores sanity. Replace aging capacitors in the scanning circuits. You can find a TMR8H eight channel high band unit most often.

TME series: The base versions of the TMR models. Both the TME and TMR models share many common circuits but the base versions contain speakers mounted on the front panel. The most common TME model is the TME8 H/LM eight channel dual band scanner in a metal cabinet with wood coloring.

ACTR series: Replaced the Regency TMR units. By the time Regency made the ACTR units, they no longer offered different models for different parts of the 30 - 50 MHz

band. Look for the later ACT series, e.g., ACTR-106 (10 channel tri band) or ACTR20/6 (20 channel tri band), used light emitting diodes for channel indicators instead of incandescent bulbs. Available in 1 to 20 channel models - most are multi band receivers. Somewhat wide selectivity. Not all that bad a deal if cheap.

ACTE series: The base versions of the ACTR series. The ACTE and ACTR circuitry is similar, although the base versions contain speakers mounted on the front panel. The most common ACTE model is the ACTE8 H/L eight channel dual band scanner in a black metal cabinet.

WHAMO-10: Regency's first synthesized scanner. Appearance more like a crystal scanner, with a single LED per channel. User has to break off teeth on a metal 'comb' for each channel according to a code book. External frequency control unit DFS-5K optional. UHF VCO reference oscillator drifts on some units. Soldered sheet metal shields around some circuitry make access to some components difficult for servicing. Comb sockets prone to bad connections after moderate use. Not recommended due to maintenance difficulties.

K500: Nice wood-like cabinet. 40 channel model with every feature Regency could dream of in one scanner, except aircraft band. Idle tone bypass feature for mobile phone stations works about 50% of the time. Weather alert feature. Service Search in several banks. Search and Store facility not implemented as well as BC250, but better than none. Built in clock when radio off or in manual mode. Can be programmed out of band. Reasonable performance, but sensitivity could be better. Spring contacts on membrane keyboard may need soldering after prolonged use.

K100: Bare bones version of the K500. 10 channels, no priority feature. Same wood-like cabinet and reasonable performance as K500. Spring contacts on membrane keyboard may need soldering after prolonged use.

M400: 30 channel replacement for K500. Service Search, but no aircraft. Easily programmable out of band. Built in clock when radio off or in manual mode. Backlit keyboard good for night viewing and mobile use but generates RFI into nearby SW receivers. A favorite.

MX3000: 30 channel replacement for M400, but basic features only. Nice lit keyboard, but may cause RFI into nearby SW receivers. Easily programmable out of band, but no aircraft. All 30 channels are in a single bank, and lack of direct channel access make this model more difficult to

Before rec.radio.scanner was approved, the alt.radio.scanner group
was used (alt groups can be created without any approval).
When an "approved" group is created, the alt group is supposed
to go away. However, it appears that some sites still have
it and the users don't know any better.

I tried the thrww button keystroke method to get the extended frequencies, (a few low ones and an 800 freq) as explained in the exer familiar Pro-51 mod text. However, channel 23, which was supposed to get the xtra 800 freq, got 857.2125. So I still can't get freq's in the 880 range. Also, I tried to move a freq from one chanel to another as suggested in the text and had no luck. Any ideas?

Anyone in the Jordan MT area that's been monitoring the FED or Freemen comms? (Yes, the Freemen have been using walkie-talkies and their shortwave... I passed through there last week and monitored.).

I'm not in that area now, but would love to get audio tape/s of the transmissions. Or, chat with someone about what they heard.

Note: If needed, I can supply several freqs that would help.

-Thanks.

>but the low batt. indicator come on within an hour.

>Any suggestions?

Greetings to David and the group,

A couple of things come to mind. First, you can't charge the batteries in 15 hours AND run the radio at the same time. The supplied charger/power supply is either/or. It doesen't put out enough current to do both. The radio will work but little if any current is left to charge the batteries. I don't know how long it would take to charge the batteries while having the radio on. The batteries take at least 15 hours to recharge (with the radio off). I leave them on charge (again, with the radio off) at least 20 hours. The pack then provides me with about 3 to 5 hours of continuous use.

Second, the nicads may be shot. If they were not taken care of or one cell went bad then the set may not be able to hold a charge or put out enough current. Try putting a new set in. I'm still on my first set of batteries. They are about 3 years old and are recharged, on average, once a week. Hope this was of some help.

I installed the OS535 in my PRO2042 about two months ago and I'm quite pleased with it (just as pleased as when I bought the OS456 for my PRO2006, in fact). If you want computer-controlled scanning, this is the only way to go. Installing it was fairly straightforward--it takes about an hour. Most of the time you'll spend cutting the back of the scanner, using a nibbler (about $12 from Rat Shack), to accommodate the interface. The real key is purchasing software that does everything that you want. I use Probe 2.0 and I recommend it highly. Among its many features is the ability to use "pipeline tuning," which increases the scanning speed (up to 80 CPS is possible, according to the Probe people, although I haven't seen anything like that). Get the readily available unlcokc code and you get cellular to boot.

I saw the posts advertising the RS9000, RS7000, RS7100 and R1 by RJone1 at some extremely favorable prices. He is offering the RS7100 for $500, more than half the typical selling price for a used scanner. I sent him e-mail, in which I said, "That's a really good price. Why so cheap?" If you're interested in buying something, that is a legitimate question, I think. After all, "If it sounds too good to be true..." and all of that. Anyway, he replied (and I quote): "NONE OF YOUR BUSINESS."

I tried to respond with follow-up questions and received a message back via AOL that said "RJONES1 is not a known user."

I know nothing about this person or the items he is selling. However, if I were trying to sell a scanner here (and I have sold 5-6 in the past 18 months), I would be a bit more accommodating and I would use an e-mail address where buyers could reach me. If you are interested in buying from this person, I suggest that you make all effort to protect yourself in the event he is not what he seems to be.

764. MOD FOR ICOM R-1?

Have you replaced the Batteries. The batteries, all or a few may
be bad. If the batteries are ok, check the output off the power unit
that came with the radio. If its ok, check internal connections.

In article <dbmartinDpM5qC.Ds8@netcom.com>,
dbmartin@netcom.com (David Martin) says:
>
>I have an AOR1000 and I am having a problem charging the
Ni-CAD bat.

Roger, I know Radio Shack has been getting a black eye on this newsgroup,
but I have one of their discone antennas in my attic. I can't believe how
well it receives weak and strong signals on my BC3000xlt handheld as
opposed to using the rubber ducky. In case you're interested, it goes for
around $60.
Cheers, Ron CAin

Geez, what a deal!
I'll trade mine for a 2006 too! In fact, I'd be willing to settle for an AOR 8K;-) For a AOR 8K/Scout combo I'll trade the 200XLT *AND* a Pro-38. My 200XLT has the cell mod, light mod, and battery mod!

Don't everyone flood my mailbox, this offer won't last long:-)

>to listen. How is that prevented?

In many parts of Europe and 'authoritarian' countries in general, it may in fact be illegal to own and/or operate radio _receivers_ capable of operating on certain bands.

In the USA, it is unlawful to import or manufacture a radio receiver capable of intercepting cellular telephone frequencies- there are also restrictions on the interception of cordless phone conversations.

Until these laws were passed, all radio transmissions were fair game- the only limitation being that in some instances (such as police broadcasts) it was illegal to retransmit or otherwise convey the content of the conversation to others. E.g. you can listen in, but you can't transcribe what you hear and tell your friends.

UNIDEN SCANNERS and Realistics made by Uniden
==========

Uniden does their darndest to make it difficult to
hack their scanners. You guys have some work to
do. Here's the deal: Even though all NFM
discriminator chips have a SCAN CONTROL pin,
Uniden doesn't always use it! Some Uniden
scanners have a separate Squelch circuit with the
SCAN CONTROL pin on the discriminator unused! You
have to find the real Squelch circuit, and then
determine the Logic for that circuit. It's easy,
but differs from one scanner to the next, and I
can't cover them all. I need your help.

See Table 2 below for a good reference. By and
large, those with scanners of Uniden origin have
to tackle the preliminaries in this fashion:

1. Locate the NFM Discriminator chip - you will
find the Audio pin from Table 1. It remains valid.

2. Determine if the SCAN CONTROL pin on that chip
is used. (Follow its trace out on the PCB)

A. If so, then determine the logic order. If
the SCAN CONTROL pin is used, then we can
use it!

B. If the SCAN CONTROL pin is not used,
then locate the real Squelch circuit.
The schematic and block diagrams in

the service manual will be helpful.
Uniden uses chips like NJM2902,
NJM2904 & NJM3403 to generate Squelch
logic. Use your voltmeter to find a
spot where the Squelch logic is 0v and
5 or 8v, depending on the setting of
the Squelch control. Table 2 shows
details for those Uniden-made scanners
with which I am familiar.

TABLE 2
UNIDEN SQUELCH CHIPS
Updated 4/08/96

Scanner	SQ Chip	CktSym	Pin
PRO-26	NJM3403AV	IC-17	14
BC-890XLT	NJM2902N	IC-8	7
BC-2500XLT	NJM3403AV	IC-204	14
BC-8500XLT	NJM2904M	IC-8	7
BC-350A	NJM2904S	IC-552	8
BC-700A	NJM2904D	IC-11	7
PRO-51	NJM2902V	IC-4	8
PRO-2030	NJM2904S	IC-10	8

NFM DISCRIMINATOR CHIPS - BASEBAND AUDIO - SQUELCH GATE DATA

There is a growing interest in tapping the
baseband audio out of various scanners for
decoding of a variety of esoteric signals,
including CTCSS, SCA, FSK, RTTY, FAX, etc. By and
large, such signals cannot be take from TAPE REC
jacks, headphone jacks, and EXT SPEAKER jacks
because of the voice-band filtering that is done
between the signal source and these output jacks.

Therefore, it is necessary to tap the "baseband
audio" directly at the output of the discriminator
chip for your scanner. The below Table shows a
list of scanners, the discriminator chip(s) used
in the scanner, circuit symbols of those chips,
and three pins of general interest on the chips:
RF-Input, Scan Control, and, of course, the
baseband audio pin.

Even though your scanner may not be listed, if you
can find its discriminator chip, it will be listed
with one or more scanners below, the pins of which
will be the same for your unlisted scanner!
Corrections and additions to this list are
requested. See my mail and other addresses at the

end of this file.

If you're not set on the Newton, consider the HP 200LX. It's smaller than a Newton, has a keyboard, and will run DOS compatible PC software in either text or CGA graphics mode. It has a built-in serial port, and accepts readily available ATA Type II flash cards for storage.

I've got one with a 10MB flash card... as soon as I spring for an AR8000, it'll be connected to the HP LX.

This is not true. It is unlawful to import or sell a scanning receiver;
scanning receiver in this context means 4 or more channels. You can
build a receiver that doesn't scan and the ban wouldn't apply.

This is off the top of my head after reading Part 15 a few months ago.

I don't think it is wise to admit, in a public forum such as this, to illegally listening in on cell phone and cordless phone conversations (as the person who started this thread has done).

Watch what you say here too!

PKH

I thought there was a third... I seem to recall that there is a third
frequency that is a data link between your phone and the cell site. This
one is suppose to give you info to what the next frequency to jump to and
when to bump up the power on your phone. Someone could have been lying to
me, but that is what someone told me.

Not necessarily. If you have the right add-ons, depending on the location
the cell site you may still be able to follow them during the change. The
trick is if you are in line of sight. You chances are better if you live
on a nice hill top over looking the city. But you also run the into problems
with interference from another cell site using the same frequency.

Scanners don't pick up this "third" frequency, that's why they are next
to useless in picking up a particular person's phone calls. All they
give you is a random sampling of calls, there's really no way you can
single out a particular person.
```

I would appreciate anyone sharing their experience of installing
the Optoelectronics Optoscan535 into the Radio Shack 2035/2042.

* What was involved in the installation?
* Does an external hole for a connector need to be made into the back of
the case?
* Are there any companies/ham shops that perform this installation?
* Does the installation require any modifcations that can't be un-done if
there are problems later that eould require the OS535 to be removed?
* Any recommendations for computer software?
* Is it worth the price of the OS535?
* Does the OS535 create any RF interferance or other problems with the
scanner?
* Any other concerns for example warranty ...etc.?

Please feel free to e-mail replies as well as post them here because I
would think this would be of general interest to this news group.

I have found a problem with the AR8000 when you communicate with it Via remote computer.

The LM command does not respond with the correct level. It seems to be clipped at level 23 hex. If I issue the LC command when squelch is broken I get a level 35 hex reading. The only difference between the two commands is that the LM may also contain the Squelch bit if the squelch is not open and some how the AR8000 is not translating properly.

Does any one have any information on this or know where I can research it further.

I have an AOR1500 and don't have a single problem with it. I am looking at and am about 50 yards away, max., from a radio tower that I know is transmitting at least 300 watts coming out of the antenna.... It gets everything from AM to 1.2 gigs fine...

Are there any mods for this model??

799. LAPD Moving to 800MHz next?

Newsgroup: rec.radio.scanner
Date: 1996-04-10 00:00:00 UTC
From: cardenas@kaiwan.com
Message-ID: <4kjpfq$g2p@kaiwan.kaiwan.com>
Source record: 236540

This was originaly a private post but others may want to know of the
'list'. Someone suspected that the frequencies may be for other city
services (street sweepers, flood control, etc), however, the list clearly
specifies the City of Los Angeles/LAPD as the licensee.

I have edited the original post/text down.
^^^

The channels are designated as LAPD, Trunking. They show no station
locations or use at this time...

I'll give you the MHz blocks of frequencies:

*821.1125 WNVL471, and WNVL472 { 4,500 LICENSES ATTACHED}!
821.1375~821.9125 WNVL471
822.1125~822.9125 "
823.1125~823.6875 "
*866.1125 WNVL468, 3LA Tx. and 1 Rolling Hills~WNVL469.

*They show 821.1375 thru 823.6875 tied with 821.1125MHz (WNVL468).
866.1375 thru 868.6875 are 'tied' to 688.1125MHz (WNVL470 & WPFN690)).

Go to Radio Shack and get the Orange book Called POLICE CALL RADIO GUIDE,
1996. Try JUNS Electronics on Sepulveda or Henry Radio and get the PINK
book , with the same name! The cost is $13 but it's worth EVERY dime. The
author for both books is Gene Hughes. They are NOT the same format, I like
the Pink better, but the Orange is VERY good if you want to see
everything a city/service is licensed for. This will not include
special federal task force channels.
^^

From: cardenas@kaiwan.com
Message-ID: <4kjphh$g2p@kaiwan.kaiwan.com>
Source record: 236541

Your device is called a *coaxial relay. In brief, it is a shielded relay that switchs 'ports' (jacks) when presented with 6V, 12V, 24V (and others). The voltage depends on the model you buy. Newer radios use solid-state switching, no relay at all.

The coil on the relay 'sees' the voltage and mechanically switches 'ports'. Some switch more than one port at a time. Some have multiple coils and switch multiple ports!

For scanner use, I would recommend a sealed coaxial relay. Do your best to protect the junctions from weather elements.

*At lower frequencies (i.e, CB), the switching takes place at a multi-contact open relay. Shielding/physical structure (to assure 50 or 75 ohms) is not quite as critical. Better radios provide coax and connectors right up to and after the relay. Better relays have gold-plated contacts.

If you plan to transmitt thru the coaxial relay, try get one that is rated twice the power you plan to use. Or, power output is 100 watts, get a coaxial relay rated for 200 watts or better.

mike3265@aol.com (MIKE3265) wrote:

>I read a ad that claims thay have a 220 volt phone that has a range of 500
>miles does anyone know of this type of cordless phone.?

The input voltage should have no bearing on the performance of the device,
unless there is not enough or it is the wrong kind of voltage.

I suspect that the range they specify is GREATLY over-rated. I know of no
cordless phone with that kind or range!

These phones share frequencies and even if you somehow HAD a 50 mile range,
your signal would have to be stronger than everyone within that 50 mile
range for your base to hear you!

Perhaps if one had some VERY high quality coax, 500 miles long and attached
the handset and base at ends... naaaaa!... the coax has too much loss and
nothing would be left at the other end.

There IS a way! During certain times, radio signals can 'skip' up to
thousands of miles! On occasion, LA Fire would inadvertently respond to
fire dispatches from across the nation. LAFD's low band radios shared
channels with other fire services in the US and thus, dispatches could be
heard loud and clear from other cities.

Many Hams jump to skip conditions for fun and sport. A nice contact would
be LA to Hawaii on 146MHz. ;)

Grove tells me that the Discone is tuned to the Military and Air bands. They said that it's a poor performer below 100 Mhz as well as at 800 Mhz and above. Therefore, they recommend their Scantenna.

I would like to purchase a base antenna for use with my AR8000. I would appreciate any feedback either positive or negative reguarding Grove's viewpoint to help me decide which one to purchase. I realize that neither will perform well on shortwave.

Thank you in advance for your time.
Roger

152.6700 mHz is NOT a valid Public Safety frequency... Are you
positive of this frequency??? What you listed is right in the middle
of the Business and Paging band... Law Enforcement doesn't really
start till about 154.700 and go from there. Also sorry I can't help
you with the frequencies I don't have a list for your area, you should
try going to Radio Shack of a Ham Radio Store and look at their
literature concerning nationwide frequencies....

> The idea of that mismatch being a problem comes from, as you indicate, the
> problems that occur when transmitting. Receiving is a different ballgame,
> and the mismatch simply doesn't matter to the scanner.

In a transmitter system not only are you worried about damage to the
radio, but you are also losing output power, as those waves are being
reflected back into the radio. In receiver systems the same goes, radio
waves are being reflected back out through the antenna, when you want them
going into the radio. That's the point. I myself use the car stereo
antenna for my scanner (impedance mismatch) with no great loss in signal. The
point being that the original message suggested using 72 ohm cable when
both the antenna and the scanner have 50ohm inputs.

809. Hey! I found NEW 200XLT's for sale!

If anyone is interested in purchasing a brand new Bearcat 200XLT, I have located some on clearance at the local Wal-Mart. These are brand new, in the box, and being closed out for $239.00 plus tax. I have owned a 200XLT and used it daily since 1991 with no problems. Still using the original ni-cad pack, in fact. Plus, in case you don't know, ALL 200XLT's are easilly modifiable for full 800Mhz coverage...just clip one resistor and it's completely restored.

Like I said, they have three of them left. Hurry!

You will need a GOOD outside antenna. You must be near an airport to hear the ground signal. Aircraft are easier to pickup but still require a good antenna.
Turn your scanner volume up pretty good, 11-12 oclock. Set your m400 gain knob to the 5 oclock position. You may even to open (turn off) your squelch on the scanner. The ACARS signals are VERY short and often will not open the squelch circuit. You might want to put a volume control on an external speaker from the 400 to baffle the noise while listening for the ACARS signal.

811. PRO-25 vs. PRO-51

Newsgroup: rec.radio.scanner
Date: 1996-04-10 00:00:00 UTC

Source record: 236614
Cross-posted to: alt.radio.scanner,rec.radio.scanner

As far as I can tell, the PRO-25 and the PRO-51 are identical scanners except that the PRO-51 is a 200 channel where as the PRO-25 is 100 channel.

Is this the only difference??? I ask because I set out to purchase a PRO-51 this afternoon but there were none to be had in my area. I believe they are discontinued. I purchased the PRO-25 instead. Its frequency range is the same as the 51.

It seems to be an ok unit but what do I know, I've been into scanners about 36 hours now. :-)

I have both, and I was pleasantly surprised with the Scantenna! I have checked the SWR with the discone across the ham bands, and it is excellent. The feedline I use is very low loss (as low as you can get without using hardline), and use type "N" and BNC connectors. I put up the Scantenna at a lower section of my tower, fed it with RG-6 quad shield from Radio Shack, and it picks up the 46-49 Mhz band MUCH better than the discone! I am planning on adding their (GROVE'S) amplifier as well (backordered!). I have used it with my AR8000. I would go that route at first, unless you wish to use the antenna to transmit.

I have a cell antenna that can be used for a scanner monitor antenna.
It is made like a small ground plane, with two horizontal radials and
one vertical element. Supposed to be 3db gain type antenna.

Will mount to window, wall, etc. with double side tape.

Includes approx. 12 feet of coax with tnc connector on one end for antenna.
Mount your scanner antenna connector on the other end and you are in business.

Will ship to your door for $25.

I will consider mounting your scanner connector for $cost + $5 if you tell me
which connector is required.

Ok try to follow me here. If you mount a decent scanning antenna on your roof and connect it to a handheld style scanner such as the BC3000XLT will you get as good reception as you would if you connected the same antenna to a base unit such as the BC9000XLT or 760XLT. In other words what I'm trying to ask is the base unit reception always goin to be better than a hand held because it's a base or what.

>cable, antenna system will bring you better reception.

In a perfect world, perhaps. I've been playing around with all types
of antennas for years and from experience, impedance isn't important
for receive. Even for transmitting, 75 OHM RG6 has worked fine with
a discone antenna, providing only about 1.5 to 1 SWR due to the *slight*
mismatch. RG6 cable has about *half* the loss of RG8. And, RG6 is
about *half* the diameter of RG8 (unless you use RG8/M), making those
windows shut tighter and those nasty holes in the wall less noticeable.

Go with RG6 unless you have the bucks to run hardline.

Handhelds are often more sensitive because they're designed to be used
with cheesy rubber antennas. But in real life, they work
about as well (no better) than a base unit on a good antenna.

So if you mount a good roof antenna, neither a base or a handheld
offers much advantage (in terms of reception) over the other.
The base units usually have bigger/better keyboards, more memory,
faster scanning and stuff like that.

From: hduff@humnet.humberc.on.ca
Message-ID: <8291476321504@humnet.humberc.on.ca>
Source record: 236634

I was just informed by my FIDOnet SYSOP that I have been banned from the ScanRadio echo for 90 days at which time I may regain access by announcing a public apology to Bill Cheek. (Not likely !)
You see, I have a problem with his advertising on a supposed non-commercial echonet and have expressed this to him several times. I made a comment about his latest business venture in response to a message he posted. I guess he took it personally.
He is subtle about attempting to turn an advertisment into an "information message" by sticking the "for more information...get in touch with me this way..." Nothing more than an attempt to sidestep the "No commercial advertising on the non-commercial FIDO echo" rule.
(Don't YOU dare try anything like this !)

I also find conflict of interest in his MODERTING the ScanRadio echo ..this is a guy who makes a living in the scanner business.
His latest antic has proven to me that pleasure and business don't mix. He used his power as moderator to boot me off the echo because I had a personal beef with him..this should have no bearing on my place on the echo. This is a prime example of the abuse that the conflict of interest can harbor.
Don't be fooled by this bully...he plays the "do it my way or else" game. And if you stand up to him he will verbally abuse you, call you a liar and attempt to defame you. He has a way with twisting the truth and getting people to side with him. Take a step back and you decide what he is really like. I was sick and tired of the Andy Moss/Bill Cheek BS that had been going on for ages...I believe I now undestand where Andy Moss was coming from.

Food for thought for all of you Bill Cheek croonies.

ATTENTION AUTHORS OF AMATEUR RADIO, SWL, AND ELECTRONIC SOFTWARE!

If your software is shareware, freeware or public domain, AmSoft would like to include your software in our publication of The World of Ham Radio CD-ROM. If you only have a commercial version you may want to think about a shareware version with registration. Most authors have had good returns on registrations from the first year of publishing thier software on this CD-ROM. If 50 users registered your program from our CD-ROM publication, what would that convert to in income for you? Please give this some thought and let us here at AmSoft know if you would like to publish your works on the AmSoft CD-ROM. If you decide to publish on our CD please upload your software to our FTP site and send me an E-Mail letter of authorization to publish your software on the AmSoft CD-ROM.

NOTE: DEADLINE FOR NEXT CD-ROM IS APRIL 29, 1996

The FTP site is HAMSTER.BUSINESS.UWO.CA directory /PUB/AMSOFT

I think that the majority of these scanners were restorable, but the
very last production runs (1994-1995) were not.

Hello all!
I have started a new WWW page devoted to scanning in the
Philadelphia area. Right now I have about 50 or 60 active frequencies
listed and I would appreciate if anyone would e-mail me with any
corrections or additions. Although it is just a list of frequencies
now, I hope to turn it into a complete guide for scanning in the Philly
area. Please e-mail me with any questions or suggestions about what
kind of information you would like to see included.

The address for the page is
http://www.lookup.com/homepages/102393/scanner.html.

Thank you for your time and I hope to see you there!

>goin to be better than a hand held because it's a base or what.

Base units typically don't have more/less sensitivity that handhelds
although they do tend to have more intermod rejection. Basically, the
answer to your question is YES. You will have better reception by adding
an external antenna and it will improve your handheld's reception about
as good as it would a base unit. Use some low loss coax like RG6. Don't
use RG58!

Does anyone know of an ftp site where I can find a scanner frequency database program for a Unix or X-windows system? I've found plenty of stuff for IBMs and Macs, but I really need a good program for Unix. Please send me E-mail (I don't read news very often) if anyone can help me.

Thanks!
-Greg

841. Can you break Panasonic's Cordless Phone Scrambling?

Newsgroup: rec.radio.scanner
Date: 1996-04-11 00:00:00 UTC
From: ace@deltanet.com
Message-ID: <ace-1104962323410001@ana2086.deltanet.com>
Source record: 236245

I just bought a 46/49 MHz Panasonic phone with "Secure Guard" scrambling so that you hacker types can't intercept my calls. When scrambling is activated (you can manually turn it on & off), my voice sounds garbled to someone with a scanner (it kinda sounds like a CB radio's single-side-band). Maybe you've heard this type of scrambling before during your eavesdropping sessions. Now I'm wondering, how hard is it for you to decifer a conversation that has been scrambled using Secure Guard? Did I waste my cash?

john

(BTW, the only other 46/49 MHz phone with scrambling that I found was a Motorola flip phone, but the shelves of the stores I went to were full of returns so i didn't try it. I looked into the more expensive 900 MHz scrambled phones but those had their problems, too. Check out http://www.deltanet.com/users/ace/index4.html for a detailed comparison.)

>issue and repost what you sent me in private to this public forumn.

Wrong, I always post via "post reply" and email, they go at

the same time. Bad taste has nothing to do with it. In some

groups post dont always make it in tact email almost always

does. Lets just call it diversity transmission. This is
being posted in the exact same manner (check the times in
the header).

>>Was Internet your first contact with the REAL world???

>I have had lots of contact with the real world, and the internet is
>not it.

We''ll if you followed this whole thread and walked down the
streets of some large cities or went into a bar, I would say
the the same diversity of personality types would exists,
unlike in some small town (or small countries) where almost
everyone thinks the same.

>Sad that you think it's the real world. The tone and style of
>your messages suggests to me that you need more real world face to
>face interaction with people.

No I just get fed up with self righteous people who get holier than thou for no good reason.

Look, hereis the situation; Yest the original poster probably wanted attention, thats obvious. But beyond that he is typical of so many creative people I deal with everyday. His little pirate radio transmitter has an intermittant problem. He obviously had some great vision of what he would do with it and being more creative than technical lacked the analyical ability to define what the fault really was. Because this was a deeply emotional event for him he expressed it the way he did. I hear program directors and on air radio talent do the same thing every day.

The bigots reject him more because of what he represents than what he said.

As fhe crap about 11 year olds, etc. listen to them talk some times, like wise for some people's mothers, etc. etc. What they really do like is the mental mode of the poster, in other words discrimination.

As for the excuse that it was crossposted. An FM 25 is not remotely cosidered any kind of ham gear, so regardless of where it went I still submit that they are responding to alt.pirate.radio where the post is not all that big of a problem.

Rob

John:

You're starting to loose it. Any email you get is merely a
"CC" of a post. So turn off the paranoia alert.

>I agree with the following paragraph 100 percent! I suggest that others
>do the same, and discard his unread email.

I must say, though, the quality of your ecent posts has
improved somewhat. Your mis-information level is about two
thirds lower than a few weeks ago.

A lot of us still want to know if its their tax money that
pays all your on line fees. And are you doing all this
during working hours at their expense.

Rob

>scanning receiver in this context means 4 or more channels. You can
>build a receiver that doesn't scan and the ban wouldn't apply.
>This is off the top of my head after reading Part 15 a few months ago.

I believe you are in error. The law was put in place to prohibit
unathorized tapping of Telephone Conversations. If you were to listen
to a Cell conversation, this would constitute tapping of the line as
only a small portion of the conversation is actually on the air. The
rest is on copper or fiber. This is the same with cordless phones.

Your statement about scanning rcvrs is also incorrect. I can order a
rcvr with full coverage from 100khz to 1.9Ghz (except cellular bands)
with 1000 channels. I did it this year when I purchased an AR8K. The
loophole is manufacturing the scanner. It states the unit cannot be
easly modifable. Yet multiple ads in magazines offer 800Mhz restore
for $40-$50. Obviously, a loophole or just not being inforced. I
purchased software and an interface for the 8K and all I had to do was
click a button on the screen and put the unit in download mode. Real
easy if you ask me. The law as it stands is esentially a joke. Many
double conversion rcvrs will pick up cell when legal freqs are plugged
in and scanned. Does this constitute as a violation of the law??? I
had a RS PRO-39 and while at the sceen of a suspected bankrobber hold
up in an apartment. I heard the FBI talk about the suspect, I was
scanning legal trunk freqs. Am I a criminal because I heard the
conversation, NO! But IF I were to use that info maliciously and it
could be PROVED that I got it from the scanner then YES I would be
committing a crime. Also, the conviction of the man how modified
receive only trunked radios to receive other talk groups than the
police dept had placed in them for the media was reversed. (can't
remember source, maybe MT or USSN) There are more laws that apply to
scanning than part 15, try the ECPA.

A lot of sites (mine included) don't carry all the alt. hierarchy.

I guess they think they're too 'frivolous' or something....

Bit of a shame really as I'd like to subscribe to alt.radio.scanner.uk
which might be a bit more relevant to me.

Matt

From: tc99@aol.com
Message-ID: <4kjahu$lol@newsbf02.news.aol.com>
Source record: 236395

I have talked to many officers of MDPD and they are not switching to
Digital as of now. They will be going to a trunked system as soon as all
the smaller cities are on line. Right now the system has designated
certain frequencies for each zone:

zone mhz
intercoastal 854.0625
northside 866.0375
doral 866.0625
miami lakes 868.5125
hammocks 868.8875
unit to unit 853.3875,867.0625,867.2875
support 2 854.2875
information 866.2875

once the others come online the computer will change these frequencies to
trunked and all channels will be heard on each frequency.

Any comments can be sent to tc99@aol.com

Are there still police radio systems in the 103-108 MHZ range in the
UK? I have never been there, but Radio Netherlands even plaid a little
sample of what one could hear above 100 MHZ about 10 years ago.

I miss the band-1 TV audio we used to get in the central US when
F2 propagation was at its hight. I understand that those transmitters were
shut off in 1985. I used to hear BBC1 and numerous other UK transmitters
in the 41.5 MHZ range as well as French TV around 41.2. Those were the days.

You and me both. Cheek is a shameless hustler who has no regard for the
conventions of protocol, regardless of the forum. He abuses them for his
own personal gain, and thinks he has a right to do so because he considers
himself preeminate in his field. Its embarrassing...

>Actually its more like tired of reading the same questions (what are
>the freq for xxx inn yyy location is it legal to listen to cordless,

Absolutely. I am learning the fine art of building a kill file like I never thought possible. I still look at this group because there is the occasional gold nugget of information. Searching for it makes me feel like the rotten kid who finds his room filled with horse patties on Christmas morning but dives in anyway because he's sure that there is a pony in there, somewhere.

Those of us who get TMJ yawning over the commercial messages and the legalistic balderdash owe it to each other to put in more nuggets so that our shovels hit more pay dirt. We can drag a discussion group up although it is easier to just let it sink in to what it has become.

I like postings about scanner listening in other countries and about how trunking systems work. The movement toward digital systems and other historical changes is all quite interesting. Valid information about ways of beating the misguided attempt to denie the reception of certain frequencies are appreciated. Flame wars and endless arguing about legalities just raises the noise to signal ratio. I think that most of us will listen to whatever we are technically capable of hearing and that is that. We also need to be decent and responsible with what we hear as anything else only causes more misguided laws to be written and so on.

By the way, TMJ is basically a dislocated jaw. One could conceivably get it by reading all the WTB, FS, and legal discussions. I have also had fun trying to write a kill line that zaps all those headings that start out: Radio Shack: You've Got . . . . I still don't have one that works globally.

Cheers,

: In the USA, it is unlawful to import or manufacture a radio receiver capable
: of intercepting cellular telephone frequencies- there are also restrictions
: on the interception of cordless phone conversations.

Uh.. Uh.. Interesting. Point # 1 is that supposed law mentioned above would outlaw all of the cellular phones with a test mode (ala built-in cellular scanning on a channel by channel basis). Point # 2 is supposed law would also outlaw TVs with a tunable UHF non-cable TV channel selector as the high end channels can monitor cellular. Point # 3 is that most scanners in the U.S. can be converted to receive cellular by replacing the CPU with an international version from the UK (Javiation for example) since as a raw material CPUs and such are exempt for such laws. Simple task to upgrade it. Point # 4 is that I do not know anyone personally who this law has stopped from listening to cellular or cordless- as my friends and I do it all the time. Point # 5 the only folks this law applies to is law enforcement, as it prevents them from gathering evidence from a cellular or cordless phone conversation without a court order, where it was possible to do so before without.

True it is harder to purchase ready to receive equipment off the shelf, but not impossible to do so. It is more expensive having to import them, which is legal "in small quantities for personal use", only commercial importation was made illegal. As a non-FCC type accepted device, it can not be determined by US customs as to if it is ok or not ok, therefore, only commercial sales was restricted by the law -- which hurts the U.S. dealers in the long run, due to less sales since anyone who knows what they are doing will order from overseas instead.

:>Just a guess - Try a reset, front panel only, while in the range.

Well what I had done wrong was I desodered a couple of wires which had the
correct markins and were next to the chip which was marked as IC2. What
this did was take out the Attenuator.

Pulled off the display and desoldered two jumpers. That did the trick.

861. Decoding POCSAG: PD200 & BC200XLT

Newsgroup: rec.radio.scanner
Date: 1996-04-11 00:00:00 UTC
From: username@qualcomm.com
Message-ID: <4kjgu1$lel@qualcomm.com>
Source record: 236406

Has anyone had any luck decoding POCSAG data using PD v2.00 with
the audio output of a BC200XLT?

I have tried, and so far have been unsuccessful with this setup. I've
checked the Schmitt trigger circuit and it appears to be working
(changing TTL level signals output when there's a signal). I get
a twirling signal indicator in PD, and 2400 flashes on every so often
in the data rate window, but no data is output (in debug mode). A couple
times a few lines of data did show up on the screen, but most of it was
highlighted (bad bytes?).

The only things I can think of are that either I need to take the
output of the receiver directly from the discriminator (anyone know
what chip & pin this would be?), or maybe I'm not listening to
POCSAG data (929.937 MHz, Airtouch in San Diego).

Anyone have experience with this?

Thanks,

Alex

Hi,

I just finished the mod that is essentially a clone of the one that Ken (klimasewski@fccvde.ENET.dec.com) offers. It is one of several 'AM Narrow mods' that seem to exist.

In effect it enables you to switch in the narrow SSB/CW filter, a definite improvement while listing to shortwave AM stations. It is amazing. Fantastic! I now can hear stations that are otherwise buried in sidebands of other strong signals. Now it becomes useful in that frequency range as well. Did not get too much sleep last night....

I recommend it strongly, it really *is* like having a new radio!

I wonder why AOR didn't built in this gem?
Groetjes,

Bart.

864. Some Optoelectronics Scout questions

From: wessel@via.nl
Message-ID: <4kj81l$6q6@news.via.nl>
Source record: 236409

Hi all,

I am considering adding a Scout to my AOR AR8000 but still have some questions. I have no dealer near me, so I thought to share them with you all and maybe we can all learn from it....

1. Does the Scout recognize modulation type (e.g. NFM or AM) or does it depend on the 8000's bandplan?
2. Can I use it as a frequency counter for homemade oscillators (yes I am a licensed HAM)?
3. My 8000 only has the stock flatcable connector for digital communication, but I gather that the Scout has cables with 3.5 mm plugs (one or two?). Do I simply add 3.5mm jackets to my 8000 and connect these internally to the flatcable connector or do I have to add some more electronics?
4. Does the Scout come with an Interface & Cables to dump it's memory to a PC?
5. And some control software that runs on a PC?
6. And if so: can I use this software/cables/interface to control my 8000 directly?
7. The unit spans an impressive frequency band. Do I need to carry a suitcase full of different antenna's? I really would like to hear from somebody with hands-on experience.
8. Are full schematics supplied or do I have to buy a seperate service manual (and if so: where can I order it)?

I realize these are a lot of questions, but the one-page flyer I managed to get my hands on does not answer them. Hope to hear from you,

Bart Wessel, PA3GYU.

>extremely favorable prices. He is offering the RS7100 for $500, more than
>half the typical selling price for a used scanner.

C'mon guys, do you think this person REALLY had any of these rigs for
sale? There are a lot of flags here....
"RJones" ..why not RSmith, RJohnson or some other equally as uncommon
name?
...an R7000 for $400 and an R7100 for $500???
...an R9000 for $2000. Well, maybe...
...no phone number or address or ANYTHING other than an AOL EMail
account
...he knew exactly when he bought each item, and each used only 15-20
times.
Tech manuals available. How many times have you seen this in
Usenew ads? A
legitimate seller would know what his items are worth under
these
circumstances.
...FedEx next day shipping. Expensive for these heavy radios.

If only 1 or 2 of the above items were present, the ad could very well
have been considered legitimate, but taking all of them into account,
well....

I have to say it was REAL tough not firing off a reply and saying "send me
everything, I want it now". Of course, there is the chance that this was
a real, honest, "I want to do something for mankind" seller. Call me
cynical, but I doubt it.

BTW, AOL isn't the only provider to give away free time. Every month, I
get something from either AOL, CompuServe, Prodigy, etc, for free hours.
Also, several local Internet providers in this area offer an account for
free for 2 weeks on a trial basis. No credit card number needed, not even
a personal visit. All done by telephone with no verification whatsoever.

From: Dave Shaffer <DCS4@psuvm.psu.edu>
Message-ID: <96102.142606DCS4@psuvm.psu.edu>
Source record: 236417

For sale:

Cobra 19 23-channel CB radio. Has microphone with magnetic mike clip. Designed for installation under dash.

Also: Uniden Superhet RD35 radar detector. Has visor clip and power cord to connect to cigarette lighter.

Both of these are old but in good working condition.

Make me an offer if you are interested...or I would consider swapping for a handheld cb radio I could stash in the trunk or under the seat of the car. Borrowed an older Radio Shack TRC-207 recently for a trip, something like that would work just fine.

- Dave

I heard a loud bang in our neighborhood a few days ago and figured
that it was some of Pat's staff firing shots in the air, but then I was
listening to CB and heard somebody with an echo mike on channel 19 with
so much reverb that you couldn't get any intelligence out of it at all.
That might also have ben Pat.

876. Hand-held scanner Nicad batteries??

Newsgroup: rec.radio.scanner

From: seeya@tellabs.com
Message-ID: <1996Apr11.212812.3727@tellab5.tellabs.com>
Source record: 236421

Hello, all...

I am considering purchasing a hand-held scanner and am slightly concerned about Nicad life, replacement, etc. Are replacement packs commonly available or do they need to be purchased from the manufacturer?? I really like the ability to use AAs for portable usage...

Uniden rechargable packs are 'claimed' to have a life between 5 and 12 hours (probably like my Mac Powerbook batt is supposed to last 3-6 hours (yeah, right...))

Can anyone out there elaborate on this?? Are my concerns completely out of line??

Thanks in advance for any help...

Mike

Well, as I stated in my original message I am brand new to the scanner scene so I don't know much about it. However, I'm given to understand that you can purchase scanners that cover the full range of frequencies from about 29 MHz to 1300 MHz with the exception of the cell frequencies and maybe a few others, but they are a great deal more expensive.

I really don't know how good the Pro-25 is but it seems to cover a pretty wide range of frequencies and was not real expensive. I have searched the net for any information on this scanner but came up with very little. I thought the scanner was a pretty new model but the date code on mine is 10A4 which suggests October 94.

At any rate, it was money well spent. I'm having a real good time with it.

Hi,

Anyone know of a sofware working with SB16 that records whenever there is sound coming into the SB16. For example. the program will automatically start recording as soon as there a sound input and will stop whenever there is no sound input.

Has anyone programmed this kind of stuff?

: 823.1125~823.6875 "
: *866.1125 WNVL468, 3LA Tx. and 1 Rolling Hills~WNVL469.

: *They show 821.1375 thru 823.6875 tied with 821.1125MHz (WNVL468).
: 866.1375 thru 868.6875 are 'tied' to 688.1125MHz (WNVL470 & WPFN690)).

A couple of years ago I was able to dredge this up out of some incarnation
of the FCC database or another

wnvl468 wnvl469 wnvl470

866 867 868 .1125 x x x
866 867 868 .1375 x x x
866 867 868 .1625 x x x
866 867 868 .1875 x x
866 867 868 .3375 x x
866 867 868 .3625 x x
866 867 868 .3875 x x x
866 867 868 .4125 x x x
866 867 .6125 x x x
866 867 .6375 x x x
866 867 .6625 x x
866 867 868 .6875 x x
866 867 .8375 x x
866 867 .8625 x x
866 867 .8875 x x x
866 867 .9125 x x x

wnvl468 Mt Lee
wnvl469 San Pedro Hill

wnvl470 Oat Mt
wnvl471 (input)
wnvl472 (input)

Last time I listened up there, the following frequencies were tied together
in a trunked system, used by LA City Parking Enforcement...
866 867 868 .1375
867 .3375
866 867 868 .3875
866 867 .6375
866 867 .8875

Actually if my memory hasn't gone south, as I recall - the system
was in test up until about the time of the Northridge quake. After
the Northridge quake it was used by building inspectors, and then only
later did the PE folks make the move... Given the amount of time,
energy and money being pumped into the new ASTRO system, I'd be REAL
suprised if LAPD had any near-future plans to move to 800MHz. I'd be
a lot less suprised if they do like LA County did and move about
everything except public safety to 800 MHz.

I have not tried that Scantenna, but I do have the D130J discone. I also have a 2meter commercial ground plane antenna that I had been using on my PRO-2006. Around 50MHz, the ground plane seems to outperform the discone. But at anything above 100MHz to 1.3GHz, it works great! I fed the discone with very low loss Cushcraft Signals cable which is double shielded with N connectors. I might consider trying the Scantenna though, for 100MHz and below.

>1. Does the Scout recognize modulation type (e.g. NFM or AM) or does it depend
>on the 8000's bandplan?

The Scout is frequency counter/capture instrument -- I would think modulation
is irrelevent.

>2. Can I use it as a frequency counter for homemade oscillators (yes I am a
>licensed HAM)?

Yes.

>3. My 8000 only has the stock flatcable connector for digital communication,
>but I gather that the Scout has cables with 3.5 mm plugs (one or two?). Do I
>simply add 3.5mm jackets to my 8000 and connect these internally to the
>flatcable connector or do I have to add some more electronics?

The 8000 requires a mod for reaction tuning -- The mod used to be the plug
on the side of the 8000. Now, the mod is for the SAC8000 ribbon cable.

>4. Does the Scout come with an Interface & Cables to dump it's memory to a PC?

I'm not sure about this -- The specs
(http://catmac.grove.net/CGI.SPG?L=S&P=SCN+27) indicate the RS-232 connection
is optional.

>5. And some control software that runs on a PC?

Plenty.

>6. And if so: can I use this software/cables/interface to control my 8000
>directly?

Absolutely.

>7. The unit spans an impressive frequency band. Do I need to carry a suitcase
>full of different antenna's? I really would like to hear from somebody with
>hands-on experience.

Probably the best answer is "it depends on what you want to listen to"...

>8. Are full schematics supplied or do I have to buy a seperate service manual
>(and if so: where can I order it)?

Don't know.

>I realize these are a lot of questions, but the one-page flyer I managed to get
>my hands on does not answer them. Hope to hear from you,

No sweat. I'm planning to buy one.

LHI POCSAG Decoder

Pager data stream monitoring unit

L0pht Heavy Industries is proud to announce the release of our POCSAG monitoring unit. Used in conjunction with a radio scanner or receiver, it allows off-the-air decoding of POCSAG paging signals at 512, 1200, or 2400bps. Both numeric and alphanumeric messages will be decoded, as well as a hex dump of raw POCSAG codewords.

This system is useful for the testing of paging systems and transmitters. With the included software, one may reject or log to disk specific pager capcodes, making it easier to track only the necessary signals. The device is powered off a PC-compatible serial port and is extremely small - handy for portable use.

The unit is available in both kit ($59.95 + s/h) and fully-assembled ($89.95 + s/h) versions. All components, schematics, software and documentation are included. Fully-assembled units are tested before shipment. General soldering and electronics knowledge is required to construct the unit from kit form, so please be aware when ordering. LHI is not responsible for any results, good or bad, produced by the user during use or construction of the product, so consider the assembled-unit if you are not confident in your assembly skills.

Name: _____

Amount Enclosed: _____

To:

POCSAG Project Division
c/o L0pht Heavy Industries

P.O. Box 990857
Boston, MA USA 02199-0857

Please include $59.95 for kit-form or $89.95 for fully-assembled unit plus $5.05 for shipping and handling in United States currency for each unit ordered. We will ship all orders via First Class United States mail to anywhere in the World. Cash, Check or Money Order accepted, sorry no Credit Card orders. Please make all checks payable to L0pht Heavy Industries. Massachusetts residents please add 5% sales tax. Please allow four to six weeks for delivery.

L0pht Heavy Industries (L.H.I.) assumes no liability for lost or misdirected mail. LHI reserves the right to refuse sale of this unit to any person, organization or entity. All sales are final.

Any questions can be directed to pocsag@l0pht.com

909. Non standard PL decoder for GE System

Newsgroup: rec.radio.scanner
Date: 1996-04-11 00:00:00 UTC
From: ronkatz@interlog.com
Message-ID: <4ki2qh$61q@steel.interlog.com>
Source record: 236470

Metro Toronto Ambulance is using a GE trunked radio system.

Recently computer data started to show up on every channel in between every transmission. After looking at a signal on a scope I noticed a DPL of about 30hz. This existsng only when someone is talking. Great so all I need is to detect it and mute all other times.

My Idea has been to build a PL tone decoder. I could do this and much more normally but the problem I have had is as follows;

Checking for frequency if 30 hz using a LM567 tone decoder will not work because I think 60-100hz is the lowest I can detect. (limits of the 567)

I've tried building a low pass filter to knock of the unwanted audio and working with just a buffered pl signal but, the opamp circuits I've tried are not narrow enough and I still can't get the signal I want.

Has anyone had a simular situation and has anyone got any ideas or sources for info. I would also like to know if anyone sells a decoder or is willing to design one.

I work in the media and need one ASAP

So..lets hear your ideas.

I'd really like to find a very narrow low pass filter. I think its better and faster method of decoding the DPL (to start with) what do you think?

From: puregold@crl.com
Message-ID: <316ca54f.2009012@nnrp.crl.com>
Source record: 236474

I am thinking about getting another handheld. Have one already and was looking at the AOR8000. I also liked the 7100.

If I could get them for the same price, which one would you choose. I listen to mainly 30mhz-900mhz. Which one is a better receiver, faster scanning speed, use options.

I really don't care too much about computer control unless it really gives me a boost in scanning speed and logging, etc.

Replies are appreciated.

Jay

Sorry Dan, you are not correct. The purpose of the R1 post is to warn people that are new to the scanner hobby. It would be unfortunate if a newbie bought an R1 as an "only scanner". Many R1's are advertised on this newsgroup at a very inflated price. The newbie would be much more satisfied with an excellent scanner such as the Bearcat BC3000 XLT. There are excellent articles that are posted to this newsgroup regarding scanner recommendations. What is wrong with a post that exposes the shortcomings of a scanner?

Yes, it's true that reception may not necessarily be any better with a base over a handheld when connected to the same antenna. And it's true that the base units are less susceptible to intermod than their handheld brothers. The "front end" of an HT, even a Ham HT, is much more easily overloaded by strong RF than a base or "mobile" radio might be. That's the main difference right there.

Personal opinion, here...
An Icom R-7100 (original, unblocked, as new) that is sold for
$700 has *something* wrong with it.
Again, personal opinion only.
I wouldn't even *think* of selling mine for under $1200.

If you know your latitude and longitude coordinates, it's not hard to
find the cell site frequencies that would server your area. YOu can look
up both the wire line and RCC (Radio Common Carrier) frequencies on an
FCC Masterfile CD-ROM. I have done that for where I live. However, it's
usually easier for me to just put the radio into the search mode and let
it search the 869-896mhz range..during peak trafic times (7-8am, 5-6pm)
The scanner will find quite a bit of traffic. Quite often, I am also able
to hear calls from adjacent cell sites also.

Newsgroups: rec.radio.scanner,alt.radio.scanner
Subject: Mailing list for Eastern Mass.
Followup-To: sender
Summary: I've created a new mailing list.
Distribution: ne

Due to popular command I've created a new mailing list, this
list covers all of Eastern Mass from West of Worcester to the
East right to the water.

To subscribe to the list, send a message like this:
To: scan-mass-east-request@nomad.n-reading.ma.us
Subject: subscribe
[Message Body] subscribe

The list is available in digested form too. It's address is:
To: scan-mass-east-digest-request@nomad.n-reading.ma.us
Subject: subscribe
[Message Body] subscribe
Digests currently go out about every two days.

If you have direct WWW access, you can get on (or off) of the
list via the simple interface at:
http://www.netspace.org/cgi-bin/lwgate/scan-mass-east/
or:
http://www.netspace.org/cgi-bin/lwgate/scan-mass-east-digest/
depending on which list you're interested in.

Tell your friends and spread the word!

Ron;

Do you remember Matt (RGX)? He told me a few years back that there was a non-standard PL type tone in between the GE Jingle tones (which are now non-existant on the Metro DAS system). He claims to have built a simple decoder that works. I dont know what chip he used, but I saw the scanner in operation and it worked extreamly well. My guess is if you can build a simple PL tone board to cover this 30hz range, you've got it made...

PS..there is a message just up from this one about someone who sent out a scanner to have such a board put in so I believe someone in the US makes such a product. Here is a transcript of the message:

I sent mail; said I'd do a COD or he'd send it to
me and let me check it out first.

Obviously, was leery about this one, trying to test
the waters...He said "you must be joking."

I said, "well, no, not really." This reply bounced.

"No such user," said the AOL gatekeeper...

Hmmmmmm.....hope nobody fell for it.....

Nothing is wrong with a post that talks about shortcomings,
but yours didn't offer anything positive. Instead of
titling it "The best scanner for your first" and suggesting
the BC3000, you chose to post a flame against a specific radio.
In fact, there are others that are available used that someone
should never own as their first. I wouldn't recommend anyone spending
$6000 for an IC-9000 as their first scanner either.

You'd have a lot more credibility if your posts were perceived
as positive suggestions rather than flames.

Mass State Police have been trying to go to 800Mhz for
over a year now and seem to have had some success
recently with this. I had a list of freq's that they
were using a year ago, but these seem to have changed.

Anyone have a list of where they might be now?

Thanks,
Mike

931. Turning off alarm on BCT-7

Newsgroup: rec.radio.scanner
Date: 1996-04-11 00:00:00 UTC
From: afn35036@afn.org
Message-ID: <316d1e82.5226937@usenet.afn.org>

It has been brought to my attention that the bloody annoying alarm
test of the Uniden BCT-7 can be disabled. According to an alert
reader, this month's "Monitoring Times" (April 96) has an item in the
"Ask Bob" column about this. The answer: press one of the service
buttons when turning on the unit. I don't know if this permanently
turns off the alarm or only until you turn it back on again. Give it
a try and let me know how it works.

Steve

> SCAN CONTROL pin on the discriminator unused! [....]

In the newer Uniden models, part of the signal detection,
squelch logic, and rescan resume are now performed by firmware
inside the CPU. Uniden was granted US patent 4947456 on August 7,
1990, covering a new squelch scheme. This information is not
provided in the Uniden Service Manuals, so I'll summarize
some of the more interesting parts.

The FM detector output is connected to a squelch circuit
which includes a high-pass filter and a diode detector.
The diode detector output is connected to an internal
A/D converter of a microprocessor which converts multiple samples
of the incoming signal to digital values and generates a mute
signal when the average value of the converted samples is
below a predetermined squelch level.

The microprocessor takes 32 consecutive samples from its
internal A/D converter. The internal A/D converter has a
conversion time of 30 microseconds, thus samples are taken
over an interval of 0.96 milliseconds. The 32 samples are averaged.
and compared with the value of the squelch control pot
The hysteresis is determined inside the microprocessor, too.

Quoting from the patent, "The presence or absence of a signal
is determined according to a hysteresis curve having upper and
lower set points equal to the value of the sample from the squelch
control pot +/-15. With A/D resolution of 8 bits and an
A/D reference voltage of 5 volts, this level of hysteresis
corresponds to approximately +/-130 millivolts. If a signal
is determined to be present, the microprocessor resets
the MUTE line, and conversely, if no signal is present,
the microprocessor sets the MUTE line. In either event,

program control returns to the main program. The MUTE line
is used as a point of reference in the description of the
program although, as will be appreciated by those skilled in
the art, the microprocessor sets and clears the MUTE
line indirectly, through switch 32, which inverts the
corresponding microprocessor output, on line 31,
and introduces a delay. Thus, as used herein in the
context of microprocessor operations, MUTE line state
will be understood to mean the commanded state, as
opposed to the actual state of the MUTE line."

"The state of the MUTE line is also used by the main program
to determine whether or not a signal is present. The
microprocessor branches from step 108 back to step 100
if a signal is not present on the currently received channel,
and otherwise proceeds to step 110. As indicated earlier,
the receiver audio is muted if no signal is present,
whereas the audio output circuit is enabled to audibly
reproduce an audio signal if one is found on the current channel."

"If the squelch is released, a 50-millisecond delay timer is set in
step 110 before the squelch is checked again, which occurs in step 112.
This time, if there is a signal on the current channel,
the microprocessor branches from step 114 back to step 110 to
reset the delay timer for another 50 milliseconds. If
no signal is currently detected, program control proceeds
to decision step 116 wherein the delay timer is checked
to see if it has timed out. If the timer has timed out,
program control returns to step 100 for resumption of frequency
scanning. If not, the squelch check routine is again executed
in step 112 to recheck for a signal on the current channel.
The delay routine just described allows for momentary lapses
in transmissions which occur during normal channel usage."

Jumping ahead to a discussion of center tuning,
the patent continues "...the tuning accuracy is checked in an S curve
routine which is executed after step 608 if the squelch bit is set.
If the squelch bit is not set, indicating no signal on the current
channel, the microprocessor branches back to step 600
for tuning to the next frequency. In step 670, the microprocessor
reads" [and averages] "32 consecutive A/D samples of the output signal.
The 32 samples are obtained at a rate of one sample approximately
every 65 microseconds. Then, in step 674, the average determined
in step 672 is checked against the upper and lower limits
of a window provided in memory. The FM demodulator produces an
output with a range from 0 to 7 volts, and voltage
divider 454 scales the output down to a 5-volt range,
which is suitable as an input to the microprocessor (V(cc) =5 volts).
The window detector has upper and lower limits of 0.7 V(cc)
and 0.35 V(cc), respectively. If the average value determined is
step 672 is within this window, the current channel is considered

to be accurately tuned, and accordingly the microprocessor
clears the MUTE line. In response, the receiver audio circuitry
is unmuted. For values outside the detector window,
the MUTE line is set...."

>NFM DISCRIMINATOR CHIPS - BASEBAND AUDIO - SQUELCH GATE DATA
>==

I get baseband audio for a CSI CD1 tone reader from test
point TP3 in the BC9000XLT.

I saw those posts too. I also saw several people responding to them,
yet a new group of posts from this guy arrived on those newsgroups
last night. Those things should have been GONE at the prices he was
asking!

These have got to be stolen, or a scam, or in pretty poor or
non-working condition for any LEGITIMATE owner to be selling them at
1/2 of what the market will bear. An attitude problem isn't always
what it seems, but these DO look too good to be a real deal!

Yes, a single resistor restores the frequency range, but you don't
have 30kHz scan increments which can make using it in your new found
frequencies a pain compared to other scanners.

>Grove tells me that the Discone is tuned to the Military and Air bands.
>They said that it's a poor performer below 100 Mhz as well as at 800 Mhz
>and above. Therefore, they recommend their Scantenna.

Telling you that the Discone antenna is tuned for the Military and Air bands is a grossly missleading
answer. The Discone is tuned for ALL bands from 25-1000Mhz and will recieve them at about 0db gain.

The Scantenna works well for the bands it is tuned for 30-50Mhz, 100-174Mhz and 380-512Mhz and will have up
to 4db gain in these bands, which is where a good majority of the public bands are located.

Therefore if what you want to listen to is located in these bands then use the Scantenna but if you want to
listen to stuff located outside of these bands then use a good Discone (like the Diamond D130J).

The main reason "they recommend their Scantenna" is because "they" make more money when you buy one.

>>I read a ad that claims thay have a 220 volt phone that has a range of 500
>>miles does anyone know of this type of cordless phone.?

Most household electronics run on 12VDC. When you plug your radio into 120 volts AC, it gets converted to 12VDC for use in the radio. Same goes for cordless phones. Besides, most cordless phones don't have more than 4 volts in the handset batteries. Even if the base was a "super station" running on 240 volts, can you imagine how big the battery in your handset would have to be?

947. HELP - repeater noise or just bad reception?

Newsgroup: rec.radio.scanner
Date: 1996-04-12 00:00:00 UTC
From: stuarte@netcom.com
Message-ID: <stuarteDpq8tF.CIC@netcom.com>
Source record: 236267
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Since I'm new to this group, I don't know if this question has come up before. Just hoping someone out there can help me out.

I have an RS PRO-42 (don't laugh) and listen to Seattle Police on the 400Mhz range. Occassionally my scanner picks up these aweful repeating tones followed by what sounds like somebody passing gas, and then a mechanized voice calling out numbers like "2...1...7...repeater". This happens on all of the frequencies I tune to in that range, (only occassionally). I'll be listening to one channel such as 460.075, pick up the noise, switch to the next frequency such as 460.475, and the noise continues as if uninterrupted. But when I switch to something like Washington State Patrol on the 100Mhz range, the noise disappears.

I don't think it's the area I live in because it has happened to me when visiting friends in other parts of the city. Is my scanner just crappy and have poor selectivity? Or is it something I have to just deal with?

Any input is appreciated!
Stuart

: method of restoring lost frquencies does not work. Is there a another
: method of activiating test mode or restoring frequencies on this model?

Does 2-9-L/O do anything at all(even if the wrong freqs are displayed)?
if so, then try 2-9-band-while the display is scrolling, hit 2-9-L/O

If OTOH, if 2-9-L/O does nothing at all, then go inside, and find the
little retro-fit board half-way under the CPU sheld.
When you find it, cut the middle wire(probably brown).
Reassemble the set, and try the keypad tricks again.

: unless there is not enough or it is the wrong kind of voltage.

: I suspect that the range they specify is GREATLY over-rated. I know of no
: cordless phone with that kind or range!

: These phones share frequencies and even if you somehow HAD a 50 mile range,
: your signal would have to be stronger than everyone within that 50 mile
: range for your base to hear you!

: Perhaps if one had some VERY high quality coax, 500 miles long and attached
: the handset and base at ends... naaaaa!... the coax has too much loss and
: nothing would be left at the other end.

: There IS a way! During certain times, radio signals can 'skip' up to
: thousands of miles! On occasion, LA Fire would inadvertently respond to
: fire dispatches from across the nation. LAFD's low band radios shared
: channels with other fire services in the US and thus, dispatches could be
: heard loud and clear from other cities.

: Many Hams jump to skip conditions for fun and sport. A nice contact would
: be LA to Hawaii on 146MHz. ;)

: Tony
: WA6IGJ

Actually, the fact that he mentions that these phones are 220 v. explains
everything-but not the way he thought;these phones have long range
because they use a fair amount of transmitter power-4 to 10 watts is typical.
The frequencies vary, but tend to be in the 72 Mhz range.
Of, course both the frequencies and the tx power used mean that these phones
are not type-acccepted by the USA FCC-thus it is against the regulations
to use them.
The only way these phones are sold in the USA is labeled "For Export
Only"-and the legality is suspect even THEN.
Needless to say Export phones would tend to use 220-240 volts, as many
parts of the world use it.

Newsgroups: rec.radio.scanner,alt.radio.scanner
Subject: Mailing list for Eastern Mass.
Followup-To: sender
Summary: I've created a new mailing list.
Distribution: ne

Due to popular command I've created a new mailing list, this
list covers all of Eastern Mass from West of Worcester to the
East right to the water.

To subscribe to the list, send a message like this:
To: scan-mass-east-request@nomad.n-reading.ma.us
Subject: subscribe
[Message Body] subscribe

The list is available in digested form too. It's address is:
To: scan-mass-east-digest-request@nomad.n-reading.ma.us
Subject: subscribe
[Message Body] subscribe
Digests currently go out about every two days.

If you have direct WWW access, you can get on (or off) of the
list via the simple interface at:
http://www.netspace.org/cgi-bin/lwgate/scan-mass-east/
or:
http://www.netspace.org/cgi-bin/lwgate/scan-mass-east-digest/
depending on which list you're interested in.

Tell your friends and spread the word!

There's no doubt in my mind it was a scam. Does anybody you know of actually own one each of Icom's most popular VHF - UHF recievers? I sure don't have any friends with that kind of cash. The current AES catalog lists the following:

R-1.......List $635.00 Sale $529.95
R-100.....List $935.00 Sale $789.95
R-7000....List $2000.00 Sale $1679.95
R-9000....List $7508.00 Sale $6299.95 WOW!!

AND...you have to be law enforcment, Gov't, etc. to buy one with cellular coverage. I'd take 'em all at that price too, but I think my odds are better at hitting the lottery. :-)

I tried using PD before and found that it would only decode 2400 baud
POCSAG data. Most of the 900 Mhz pagers are using a higher speed of
data; 9600 I believe).

You may also try adjusting the audio as not to overdrive the computer.

Mine did work, and I did not have to build a Schmitt trigger or find
descriminator audio. You may have other problems.

Hope I've helped.

The example you use, (sounds like SSB) is exactly the description used to describe frequency inversion. It's obviously not digital.
You're safe from the "casuals" and the walkins to RS but a dedicated "scannist" or cop will probably not have much problem.

> =====
Point #1: It's not a "supposed law", it's a real law. It's called the ECPA.
And, no, it doesn't outlaw anything except certain scanners. The description
of the banned equipment is found in CFR 47, sec 15.21. Any good library will
have this here in the US, so you can look it up, and know what you are
talking about.

Point #2 is covered under Point #1.

Point #3: The law does not make such modifications illegal, even thought the
opportunity to do so was clearly present. The language (see reference above)
is, "...must be incapable of operating (tuning), or readily being altered by
the user to operate, within the frequency bands" for cellular phones.

Point #4 means nothing. People still rob banks, that certainly doesn't mean
we should repeal the laws making that illegal.

Point #5 is just plain wrong. Nowhere is this law aimed only at law enforcement.
To say that is only wishful thinking on your part.

> True it is harder to purchase ready to receive equipment off the shelf,
> but not impossible to do so. It is more expensive having to import them,
> which is legal "in small quantities for personal use", only commercial

> are doing will order from overseas instead.

Much of this is true, however, the rules do *not* make a distinction between
commercial and personal importation.
At this time, the Customs people are not enforcing the ban on importation
for private use/individuals, but this can change at any time, at the whim of
Customs.
A non-FCC type-accepted device can be impounded at the border by Customs,
as that's part of their job. I have no idea where you came up with this.

I think you guys need to read the rules as posted there. You would
see that commercial postings *are* allowed, and not just by the
moderator.
Of course, this type of fact isn't well received by you, because it =

ruins your pout party. But that's life. Get over it.

What you are getting sure sounds like Intermod, from pagers. The PRO-41 is
a double conversion unit, and prone to intermod and images in certain
conditions.
What you might try is a *worse* antenna. I know this sounds silly, but it
often works, as the off-frequency signal (the pager in this case) will be
weaker, and won't interfere with the tuned signal as much.
Hope this helps.

I've been seeing a *lot* of requests for this lately, and no responses.
Maybe such a thing doesn't exist, yet.
Whould be an interesting project for some budding programmer...

The complaints about radio shack seem to be coming from two
classes of individuals.
In class number one we seem to have the novices who simply
do not do any research into their purchase and therefore are
totally reliant on the salesperson, for better or for worse.
But then we have all been there, have we not.

Then there is class number two, consisting of the so-called
experts in this field that like to run down less knowledgeable
people to puff themselves up and to stroke their own ego's.

I have been dealing with radio shack for as long as i can
remember and have no complaints about the products that i have
purchased from them.

I am presently using a pro 2006 that i purchased last year
for 320 canadian. It does everything that i want with a
scanner, at a price that i am willing to pay for it.

Do i want a scanner with all the bells and whistles, sure.
Do i want to pay in the range of 1000.00 dollars for one,
you gotta be out of your mind. There just isn't anything out
there worth listening to for that outrageously high price.

Lucky for the majority of buyers that radio shack is out there.

Ron:

I think you will find that the new G-Wiz mod will eliminate your
problem all together. It will detect the tones or jingles after the
transmission and will let the scanner continue to scan. It will also
detect and block the data sound or "buzzsaw" sound that some EDACS
systems have rotating from channel to channel.

I think ScannerMaster offers the mod for about $90. Give them a call
and see what they say. 1-800-722-6701

Regards and good luck.

From: ukfan1a@aol.com
Message-ID: <4km1jd$j3r@newsbf02.news.aol.com>
Source record: 236344

I know the 3 main baby monitor frequencies, but I've been getting some things that sound like them in other 49 mhz frequencies. How many licensed baby mont. freqs. are there, and what are they?

Also, are there any frequencies for household intercoms? Or those wireless household paging intercom systems?

Thanks!

976. COLT Z28 Question

From: kekodesu@aol.com
Message-ID: <4km2cg$jdf@newsbf02.news.aol.com>
Source record: 236345

I've got a pre-ban Colt Z28 mobile/base scanner that I had in my car. It was great for picking up the CHP repeaters out here in CA but I've taken it out and am looking to convert it to home use.

Does anyone remember the default lockout code for these things? I forgot my old code a long time ago, and does anyone know how to program these things?

I'm also looking for a good small antenna. Any recommendations? And is there a way to convert this to 800-900 mhz frequency internally without adding an antenna converter?

Any help would be appreciated.

Sounds like they're using DCS. Next time I'm in radio range of
their system I'll put my TCF-4 on it and see if it recognizes a code
stream or not. Usually digital squelch codes will show up on a
frequency counter around 30 Hz, but that isn't a true CTCSS reading.

Not with a BC200XLT but I've done it with a pro 2006, 43, 2026, so you should be able to do it.

> I have tried, and so far have been unsuccessful with this setup. I've

> highlighted (bad bytes?).

I've found that by changing the volume the software will get a higher % of good bytes. After fooling around for quite awhile I got it to go as high as 90+ % and adverage of about 85% which isn't to bad. So try to fool around with the volume control. The advantage of using the discriminator would be that reguardles of the volume setting you should get a nice clean signal at a set voltage range, just remember to change the components in the circuit you built if you go this route.

Hope this helps you, by the way if you are running the registered ver of the software do you ever have it just drop to the DOS prompt when logging everthing to disk??? I have this happen sometimes after about 30 or 40 minutes.

> The only things I can think of are that either I need to take the
> output of the receiver directly from the discriminator (anyone know
> what chip & pin this would be?), or maybe I'm not listening to
> POCSAG data (929.937 MHz, Airtouch in San Diego).

What I did was to get one of my friends that was into scanning to come over with his pager and showed him the software and trigger. He showed me his pager right away, and on the back it has the freq and 7 number cap code. He wanted to see if my little project worked as bad as I did. The only thing is he had changed servers and the cap code and freq didn't match the tag on the back, after thinking about it he called the pager server and asked what freq and cap code they had asigned to him and low and behold we were receiving his pages...

Then consider the eviction *permanent*. :-))

>You see, I have a problem with his advertising on a supposed
>non-commercial echonet and have expressed this to him several times.

And you were advised to remain ON TOPIC several times......

>I made a comment about his latest business venture in response to a
>message he posted. I guess he took it personally.

Nope. You broke the rules one too many times. You knew the rules
about flames, flaming, and staying ON-TOPIC. You broke 'em, and
got a Size #13 crosswise on your sweet patooty for your efforts.

>He is subtle about attempting to turn an advertisment into an
>"information message" by sticking the "for more information...get in
>touch with me this way..." Nothing more than an attempt to sidestep the
>"No commercial advertising on the non-commercial FIDO echo" rule.
>(Don't YOU dare try anything like this !)

There are rules about that, too. You just don't READ the rules,
or perhaps don't understand plain English.

>I also find conflict of interest in his MODERTING the ScanRadio echo

And so now you do not need to put up with it anymore. :-)) Look at
it as if you were cut free!

>..this is a guy who makes a living in the scanner business.
>His latest antic has proven to me that pleasure and business don't mix.

See above......

>He used his power as moderator to boot me off the echo because I had a
>personal beef with him..this should have no bearing on my place on the
>echo.

It didn't, cheese-fer-brains! You continually flaunted and broke
the Rules. The FidoNet SCANRADIO echo is -=NOT=- a forum to voice
personal beefs. You could have used e-mail or netmail, but to date,
all I've heard from you is your nescient, prepubescent whining and
sniveling in the public forums. You did it one too many times on
the FidoNet SCANRADIO forum.

>This is a prime example of the abuse that the conflict of interest
>can harbor.

Oh, do tell! :-)

>Don't be fooled by this bully...he plays the "do it my way or else"
>game.

True. I -=AM=- the moderator on the FidoNet SCANRADIO echo, and the
topic of discussion IS and will continue to be SCANNERS AND SCANNING.
Flaunt that rule or flame someone and you're gone. Like it or lump
it, I guess. Just fish that "lump" out of your shorts and pitch it in
the toilet, please.

> And if you stand up to him he will verbally abuse you, call you
>a liar and attempt to defame you.

No, beanbrain, it is not a matter of "standing up". It is a matter of
understanding and complying with the Rules.

> He has a way with twisting the truth and getting people to side with him.

Ha ha ha ha ha ha ha.....since when have I cared about choosing
up sides? Looks like you're the one drumming up a train behind your
butt. heh heh heh........

>Food for thought for all of you Bill Cheek croonies.
>
>Hugh Duff VA3TO Toronto

Food for thought for all those who sit on their duffs, I'd say.
You got a beef, all right. You much prefer the anarchy of the
Internet where you can snivel, whine, stammer, and bellow in public.

So have at it! Unload! Drop your britches and cut loose! Take
advantantage! Run me off, Mister Duff! Or get off your duff and run!

Hmmmmmm. Consider your paying for access to the Web, then; not the
UUCP.

Meanwhile, my intent is to prevent the CD-ROM garbage collectors from
snapping up my posts and reselling them..... It's been done in the
past, and if they're going to make money off me again, then they can
share the proceeds.

That's the issue anyway.....

There are a LOT of things that can be done to the PRO-2022, but darned little, if anything, that can be popped into an ASCII text in so many words or less. Clipping D44 for cellular is about as simple as it gets, and the rest requires lots of text, photos, illustrations, etc.

The information is available.....just not in BBS files and Internet archives. E-mail me if you're still hot on the notion.

Interesting! Are patents available for reading from the Internet?
In other words, how did you come by that one? I'd be interested in
doing a little research along those lines.....

Bill

Must need to use nibbler to cut a piece out of the back of scanner.
Installing interface takes about an hour--no soldering needed.

> * Does an external hole for a connector need to be made into the back of
> the case?

See above

> * Are there any companies/ham shops that perform this installation?

I don't know.

> * Does the installation require any modifcations that can't be un-done if
> there are problems later that eould require the OS535 to be removed?

No, other than cutting the section out of back, which cannot be undone.

> * Any recommendations for computer software?

Probe

> * Is it worth the price of the OS535?

Worth is relative to what you intend to do with it. I think it is
expensive but I wouldn't do without it.

> * Does the OS535 create any RF interferance or other problems with the
> scanner?

Mine doesn't.

> * Any other concerns for example warranty ...etc.?

None etc.

Yes, the same old tired questions keep coming up. Look how many there have been on the OS535 and PRO2035 in the past couple of weeks (three, at least). And will someone answer those eight guys' questions about PRO2006 cell mods? Gentlemen, you're complaining, do something about it--like write the FAQ!

You might try being a bit more specific. What TYPE of transmitter? IOW
what frequencies do you want to transmit on? There's kits aplenty for
FM stereo transmitters and 10,20 and 40 meter Transmitters etc etc.
Ramsey makes such kits and they tend to be fairly inexpensive.

>50ohm impedance connectors.
>

I am a licensed amateur radio operator..the antenna in question is
resonant on the ham bands.. it has good SWR there, which rules out
a problem with the antenna.. the SWR can be low but the impedance a
mismatch at the tuner input, e.g. it might not match the impedance of
the coaxial cable..this would probably result in a higher SWR,
however.

Uniden is stumped by this..but that doesn't surprise me.

: (you can manually turn it on & off), my voice sounds garbled to someone with a
: scanner (it kinda sounds like a CB radio's single-side-band). Maybe you've
: heard this type of scrambling before during your eavesdropping sessions. Now
: I'm wondering, how hard is it for you to decifer a conversation that has been
: scrambled using Secure Guard? Did I waste my cash?

It's not that hard, they're just using frequency inversion, and there are
devices you can buy cheaply to descramble it.

But what you have helps. Most scanner users won't bother to set up one
of these. It's easier for them just to find someone else to listen to.

1007. Re: Photojournalist needs best scanner for trunked police transmis@

Newsgroup: rec.radio.scanner
Date: 1996-04-12 00:00:00 UTC
From: atocco8586@aol.com
Message-ID: <4kmlhs$q5b@newsbf02.news.aol.com>
Source record: 236376

SO!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!

AFTER ALL THIS INTERESTING READING (NO SARCASAM INTENDED) CAN ANYONE
SUGGEST A RADIO THAT IS THE BEST FOR LISTENING TO TRUNKED SYSTEMS.

I OFFER THE FOLLOWING;

SOMETIMES THE "BROADCASTING ORDER" IF YOU WILL., CAN BE DETERMINED
BY USING THE FOLLOWING PROCEDURE;

LOOK UP TH AGENY YOU WISH TO MONITOR IN RADIO SHACKS BOOK CALLED
"POLICE CALL" LOOK FOR ONLY THE TRUNKED FREQ'S IN THE RANGE OF ---I THINK
856.000-900.000----- ANYWAY HALF OF THE FREQ'S LISTED WILL PROBABLY BE IN
THE 810.000-815.000 RANGE AND THE OTHER HALF IN THE 855.000 AREA. PUT ONLY
THE HIGHER RANGE FREQ'S IN YOUR SCANNER. LISTEN WHEN THERE IS AS LITTLE
ACTIVITY AS POSSIBLE. LISTEN FOR DISPATCH TO YELL OUT A CALL, THE RESPONSE
TO THE DISPATCHER SHOULD BE ON THE VERY NEXT FREQ IN THE LIST OF FREQ'S AS
STATED IN POLICE CALL, AS THE DISPATCHER RESPONDS BACK TO THE COP IT
SHOULD COME UP ON THE VERY NEXT FREQ IN THE LIST--SO ON --SO ON -- IT IS
EASIER TO FOLLOW THESE SYSTEMS DURING TIMES WHEN THERE IS LESS ACTIVITY.
IF YOU ARE GOOD AT RECOGNIZING VOICES, AND THE SYSTEM YOU ARE TRYING TO
MONITOR IS FAIRLY SMALL, YOU WILL FIND YOURSELF BECOMING MORE AND MORE
PROFICIENT AS TIME GOES ON. I WILL SOON BE PUTTING TOGETHER DISK FILES OF
THE BROADCASTING ORDER FOR ALL THE TRUNKED SYSTEMS IN MY AREA (TAMPA
FL.), AND I WILL BE TRADING THIS INFO W/ PEOPLE LIVING IN OTHER AREAS.
WITH AN AR 8000 SCANNER YOU CAN PLUG YOU RADIO INTO YOUR COMPUTER (VIA AN
INTERFACR) AND PROGRAM UP TO 1000 FREQ'S AT A TIME INTO YOUR RADIO.
I HOPE YOU CAN MAKE SOME SENSE OF THIS--PLEASE FORGIVE ANY SPELLING
ERRORS.

I AM ALWAYS WILLING TO HELP SOMEONE GET THE MOST OUT OF THEIR SCANNING
EQUIPMENT.

E-MAIL OR FEEL FREE TO CALL;
TONY (813)790-6012

> wireless household paging intercom systems?
>
> Thanks!

The baby room monitor frequencies are:

49.830 49.845 49.860 49.875 49.890

Most household intercoms operate through the house electrical wiring and
operate in the 150 - 300 Khz range.

From: willmore@whelk.cig.mot.com
Message-ID: <willmore.829329877@whelk>
Source record: 236381

Greetings, I'm an amateur radio operator looking for some general purpose reception capability along with some scanning ability. I have 144-148 and 430-450 covered, but I have nothing for the upper part of the 10M band(FM), 50-54MHz, 219-225MHz, 902-928MHz, and, if possible, the 1.2 GHz band. I'm mostly interested in receiving signals in the amateur bands, but I might become interested in scanning as time goes on. Another things that would be nice is good general purpose receive--NB-FM, WB-FM, AM, flexible step size selection, gap-free coverage, etc.

Either reply to this news group (rec.radio.scanner) or mail me directly (willmore@cig.mot.com) as you see fit. Thanks to all who reply.

Cheers,
David N0YMV

P.S. Cellular coverage would be nice, too. CIG stands for Cellular Infrastructure Group.

I did send off an email to R.Jones stating I did want
everything. Got a reply back same night that everything
had been sold. I was more than willing to hop on a plane

and fly to his location to take delivery of this collection of radios in person. Even with purchasing an airline ticket this still would have been a bargain. Maybe the lucky purchasers will post the details of their deals.

Bill, you might check out this site:

http://www.qpat.com/

This lets you search and read patents, but the drawings aren't shown. The copy is available for sale....limited time (10-days?) to use the service for free. Kinda interesting I think.

1015. Anyone Have Mods for the PRO-36

Newsgroup: rec.radio.scanner
Date: 1996-04-12 00:00:00 UTC
From: Karen Eaton <yu114681@yorku.ca>
Message-ID: <4kmjfo$7u6@sunburst.ccs.yorku.ca>
Source record: 236384

I have a Realistic PRO-36 handheld scanner and I am
wondering if anyone knows if there are any mods known to
improve this older model scanner.

1016. Re: New PRO-23 Mod????

Newsgroup: rec.radio.scanner
Date: 1996-04-12 00:00:00 UTC
From: mervins@aol.com

>>Does 2-9-L/O do anything at all(even if the wrong freqs are displayed)?
if so, then try 2-9-band-while the display is scrolling, hit 2-9-L/O<<

No, 2-9-L/O does nothing - not even clears the memory. I will check for
the added circuit board tomorrow. Thank you for your guidance.

the laws vary state to state.. I'd look around on the web for some
info..

what state do you live in ?? i'll try to find out for you..

have fun..

It sounds like your scanner is getting some intermod...
Not to much you can do about it. Are you using a external antenna with
it?? If so i'd just use the rubber duck. Usint an external antenna will
introduce more intermod....

have fun

1021. Re: BC9000XLT worth it?

Newsgroup: rec.radio.scanner
Date: 1996-04-12 00:00:00 UTC
From: dschopp@ix.netcom.com
Message-ID: <dschopp-1204961854560001@ix-stl5-08.ix.netcom.com>
Source record: 236390

I hate to be the fly in the ointment but I was very unhappy with my BC9000XLT. I bought a BC9000XLT and sold it after six weeks. I was very disappointed with its sensitivity even when connected to an outside antenna. The 9000 dooes have some good features such as 250 chnanel alpha numberics. I also don't beleive the CTSS is built in, I had to have a CTSS board added to my unit. I now have a Radio Shack 2035 which I love, I can hear more with the 2035, using the $9.95 Radio Shack ham/scanner antenna, than I could ever hear on the 9000 even when connected to the outside antenna. Also buying mail order can save you money but it makes it difficult to return the unit if your dissatified with it.

I don't think anyone is complaining about Radio Shack Products. I'll be the
first to say they have some great scanners. Their antennas aren't bad
either. But the sales people at some (most) of their stores are what the
people are complaining about. If you know what you want and where it is in
the store you're fine. But for the electronics/scanner/cell phone newbie
LOOKOUT! cause you are about to get an incredable amount of MISS information
from a Radio Shed Sales Person.

It is a great radio, but be careful what you pay. I have noticed the
prices dropping quickly and have also heard that a newer version is
about to debut. I have seen them selling new for $300-$340 recently.
Look for them to drop even lower.

Try:

30-87.975MHz in 25kHz steps, using NBFM (although they transmit with a bandwidth greater than 5kHz...). Freq-Hopping/Anti-Jam (SINCGARS) gear is becoming prevalent for many Army 'Fox-Mike' band comms, but these guys might be using a standard, analog channel.

108-152 (or 174)MHz normal ATC + military operational & discrete comms. I'd emphasize 138-144 & 148-152MHz when searching, and use FM mode when searching above 137MHz (although they could use AM).

225-400MHz standard military aircraft band, AM mode, 50kHz steps if the aircraft radios are older, otherwise use 25kHz stepping.

Depending on the model & mission of helicopter, it might also have regular HF/SSB capability as well as a special secure/anti-jam Army HF net system capability.

If you can't devote enough resources to determining their electronic order of battle via SIGINT (i.e. don't have enough time to keep searching for them!), I'd suggest performing some HUMINT at air shows/base open houses in the vicinity of the helicopter unit's home base. You might find one of their birds to be on static display, and you can climb in (after waiting patiently in line behind dozens of little kids -- it can be kinda embarrassing to be the only person over 3' tall waiting to climb in, [Oh, the sacrifices we make for our hobby!] but pretend you're a secret agent in the process of obtaining highly sensitive data!), locate the radio control heads, and hopefully copy down some of the freqs on the channel lists.

Quick method would be to speak them off (discretely) into a tape recorder, or take a photo of the dashboard, focussing of course on the freq/channel info.

You could also simply ask one of the crewmembers what their main ops channel is!

But it's not entirely illegal to listen. It is illegal to INTENTIONALLY
listen to conversations. If you just happen to stumble upon them, you
can't help it. But it is illegal to divulge any information on your
stumbling path.

Is this kook for real..?

A moderator how uses his position for personal flames, in public, and then kicks users off the air for
doing the exact same thing..? Mr. Cheek, in all honestly, I am somewhat new here, but your attitude is
extreamly abusive and self-centered. (And you should be removed as a moderator immedately).

> No, beanbrain, it is not a matter of "standing up". It is a matter of
> understanding and complying with the Rules.

Is calling someone "cheese-fer-brains!" complying with the rules (flaming)..?

I've seen (we all have) offensive displays of superiority and overbearing self-importance in other
networks before, mainly in the religion conferences. It's always sickening to see a person gain power
over a small part of the world and use his "authority" to bully the users.

If this is the attitude you show in public, as a moderator, you need to step down and turn your fido
conference (whatever that is) over to someone else who is more mature and tolerant.

> Ha ha ha ha ha ha ha.....since when have I cared about choosing

In case you've been surfing lately, Bill, I've starting see some of my lists pop up in several FTP areas. My name is on there and I honestly don't care. But with the amount I've posted in the past two years in terms of federal frequencies, SIGINT techniques, and other hard to obtain information, I'm amazed it hasn't been stuck on someone's CD. I assume it's only a matter of time, though.

Hello Everybody! It has been a very long time since I posteed here but I still read regularly
and am happy to see scanning is still popular.I dont have a scanner per se, but do have a way to listen..usually on my commercial portables so I still maintain an interest.I am looking
for some Frequencies for Hawaii! I am fortunate enough to be going for a week in the middle of
May and thought I might bring along a portable...I would like any Ham radio frequencies I can
get and maybe a short list of more popular public safety channels in use.If you can help,I would really appreciate it....Thanks again and good to see the list so active!!
Adam.

1047. WANTED: BC210XLT Mods

Newsgroup: rec.radio.scanner
Date: 1996-04-13 00:00:00 UTC
From: gdrose@auburn.maine.com
Message-ID: <4kn1bt$i14@headwall.maine.com>
Source record: 236298

I have searched all of the WWW sites I could find with scanner mods and NONE even mentioned the Uniden Bearcat 210XLT. How can this be? This scanner isn't an ancient relic or anything.

Anyone? Anywhere? Help?

If this is absolutely unmodifiable unit, please let me know that too.

thanks,
Greg

>on RadioShack units) that prevents ANY call if the handset is actually
>sitting in the base. On most models, the security code is reset to a new
>code every time the handset is returned to the base, and they typically
>have 65,536 or more codes (i.e. a random 16-bit number).

Thanks for that info, Paul.

I'm looking at all possible ways that an outsider might be able to
break into any unit that I buy. Suppose he were to record the digital
code that my handheld transmitted at startup, then transmitted a very
strong signal with loud audio on the same frequency, preventing my
equipment from communicating the new code. Would he then be able to
activate my base set at a future time, using that same code? (Assuming
that the unit didn't have COM-LOCKtm).

(They don't call me paranoid for nothing! :-))

>More to worry about than someone using your line is someone hearing your
>phone call. Legalities notwithstanding, I know of no scanner sold that
>cannot pick up cordless phone calls made on standard 46/49 MHz phones.
>You can virtually eliminate the possibility of this happening by getting
>a 900 MHz Digital phone. You will pay 3-5 times as much as a standard

Yes, the portable BC220XLT/BC230XLT would be a very good first
scanner. I tested one and published the results in the
April 1996 (current) issue of Monitoring Times magazine.

DRAKE R8A Shortwave Communications Receiver (Latest Model!)
100-30,000 KHz, AM/FM/LSB/USB/CW/RTTY Modes!
Includes Drake's optional internal VHF module, adding
coverage: 35-55 MHz, and 108-174 MHz, including Aircraft!

I purchased this brand new just last month (Mar 96). I'm
forced to sell it due to loss of employment.

Including tax, I have $1,351.50 invested!
I am willing to sell it for only: $950.00 [firm]
I will also pay standard UPS, insured shipping, anywhere
in the U.S.

1053. BC 855 XLT

Newsgroup: rec.radio.scanner
Date: 1996-04-13 00:00:00 UTC
From: apache@i1.net
Message-ID: <4knbri$spg@news1.i1.net>
Source record: 236304

I just purchased a BC 855 XLT because I thought they could all be mod'ed for cellular. I got the mod file, the same file was at all the mod sites, and the description and ascii diagram of the circuit board doesn't look like my board. The date code is OAID or 0A1D or something like that. I understand this unit has been discontinued.

Are the latest 855 XLT's unmodable?

Is there a more detailed mod description?

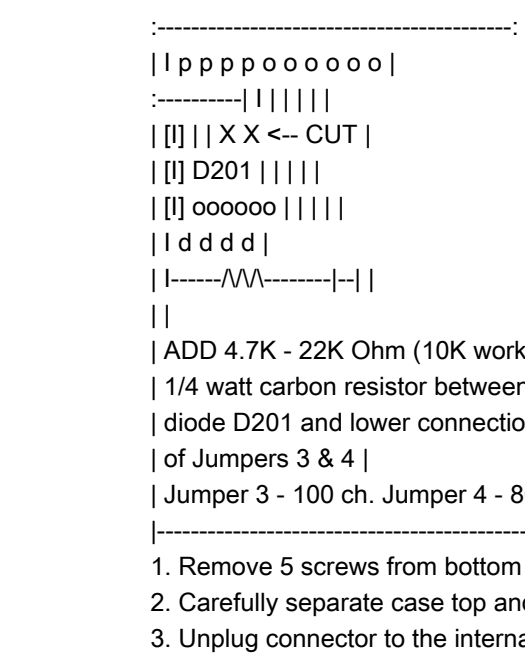
Anyone who has completed this mod, please drop me an e-mail with some hints.

Darren
apache@i1.net

This is the mod I have:

DISCLAIMER: This article is listed for the technically curious. No guarantees are stated that the mods listed below will work on all scanners of this model.

UNIDEN BC-855XLT MODIFICATIONS
Scope of modifications:
[1] Allow continuous 800 MHz receive.
[2] Increase channel capacity from 50 to 100 ch.



| ADD 4.7K - 22K Ohm (10K works) |
| 1/4 watt carbon resistor between |
| diode D201 and lower connection |
| of Jumpers 3 & 4 |
Jumper 3 - 100 ch. Jumper 4 - 800 MHz

1. Remove 5 screws from bottom of scanner case.
2. Carefully separate case top and bottom.
3. Unplug connector to the internal speaker.

4. Locate diode D201 and 4 jumpers near edge of circuit board.
5. Cut the 3rd and 4th jumpers near the middle and fold
downwulate leads, if necessary.
6. Connect the lower part of jumper 3 & 4 to one end of a 10K
Ohm 1/4 watt carbon resistor, insulate all exposed leads.
7. Connect the other resistor lead to the lower connection of
diode D201, DO NOT cut any leads on D201.
8. Make sure all exposed leads aren't touching any other
connections, insulate as required, tack in place
with a dab of RTV silicone, or low temp hot glue.
9. Reassemble scanner, make sure to plug the speaker back in.
You should now have a scanner with 100 chs. numbered 01-00 &#65533;
in 5 banks of 20 ch. and continuous 800 MHz coverage.

WARNING!!! Doing the mod to jumper 4 REMOVED 75 percent of the 800 MHZ
Band on my Scanner. Replaciing the jumper restored the
coverage to design limits, without harming the Scanner.

My serial # is 25021343.

I suspect different boards have been used in this scanner.

ADDITION: My scanner had the jumpers depicted. However, there were 2
more jumpers after those depicted. Disregard any additional

The Police Call that is sold at Radio Shack stores is Vol. 9, includes CA, OR, and WA. Why pay for states you don't need? Though it certainly contains more frequency information, why pay for frequencies you have no use for? The pink (or blue, they keep changing the color) one is the "Southern California Detail Edition" which has EVERYTHING you need for the LA/Orange/SB/RIV/VEN/SD counties. If it's not in there, it's probably not worth listening to. OK, so that's an exaggeration. But, you get the point.

Why Radio Shack doesn't sell the Southern California book is beyond me.

The BC760 is one of the BEST mobile (and also base) scanners made. You should think about getting it with the CTCSS module installed. 100 channels is MORE than enough when travelling mobile. The receiver is FANTASTIC. The Radio Shack Pro-2026 is SIMILAR in appearance and function to the 760 but is NOT the same radio.

I agree. I have two R-1s and use them both in the Carribean
with excellent results! I wouldn't think of wasting my time with them
here in Pittsburgh, tho--it's not built for that type of service. I
live in the middle of the city here--and when I first got an R-1 I
thought, "What a useless radio." But now that I've taken it other
places, I realize that it's really a good radio in the proper
enviroment. It's just like the GE Superadio I have--works very poorly
here in the city....but in the Carribean it's a champ!

>would take some time... could anyone program the above freqs into
>banks 9 and 10 to try this? I would greatly appreciate any help
>anyone could provide me in this matter.
>

I have confirmed the second problem of having 2 banks selected for scan and having the first bank's priority set to a channel higher than I am currently stopped on and the scanner will absolutely not look at the second bank's priority channel ever. As soon as I put both priorities back to the first channel in the bank it works fine. I tried this on a friends BC3000 and it behaves the same as mine (firmware rev USA 0.20). I could not duplicate the second problem of searching outside the legal range of channels, etc. since his scanner was fully programmed and I did not wish to disturb his setup. I have also confirmed that it can take a few times through scanning with my failing setup to get the unit to actually begin scanning in out-of-bank regions. I think it might have something to do with my particular frequencies and the default sorting of the unit and the way it handles priority channels. In any event, there are problems with the priority scan with the 0.20 rev firmware under certain conditions unless two 3000's are failing the same way due to hardware problems. For now I'll simply organize my channels to keep the first channel of each bank worthy of priority.

Take care,

Not at all.
You paid for your computer, you pay for your phone line, yet you would
consider getting this same data from a BBS as free, wouldn't you?
Same here. You are not being charged for the data, you are being charged
for the *access* to the data. Once on the Internet, the data is free of
any charges.

> Thanks for your help.

If thats all that you can afford then do it.
I think that its a highly over rated unit.

Scan delay is global...what a waste...to use the channel delay it has to
be on for ALL channels...A major inconvience to say the least.

AlphaNumerics for only 250 channels.

The DATA function is a waste

So So audio

It is intermod prone near RF dense areas on an outside antenna.

Suffers from imaging problems in RF dense areas A real pain!

The wall wart (power supply) concept is a stupid cost cutting idea.

For the money and the performance of the 4 units I have had...I
personnally would NOT recommend the unit....Unless you are stuck with one
and are trying to
dump it.

No give me a 2004 with CTCSS and then you have a real radio.

Big difference! The 200 is fully modifiable while the 220 is not. Best deal around is a 200XLT if you can still find one. Here in Florida, Wal-Mart has a few left for the closeout price of $239. I've had my 200 for almost 5 years now...use it every day with no problems at all.

Have you checked with the fixed base operator at your local airport?
They may have what you're looking for. As an alternative, you could
look for a Bearcat or Radio Shack scanner that will cover the desired
frequency range.

1089. Changing Priority Channel of my Pro-37

Newsgroup: rec.radio.scanner
Date: 1996-04-13 00:00:00 UTC
From: sonyal@crosslink.net
Message-ID: <4kp8e9$qar@zeus.crosslink.net>
Source record: 236340

Just wondering if the priority channel can be changed on my
Pro-37 without resetting the scanner and losing all of my stored
frequencies?

The work-around I used was to program the new frequency
into the existing Priority channel... Problem is I would really like
to make the priority channel a different channel number (so that falls
within the appropriate bank) and I can't seem to do it!

Thanks in advance.

Perhaps you have the BC9000XLT confused with another model.

The rescan delay is individually selectable on a per-channel basis
in all three BC9000XLTs I've had.

The remainder of your comments are more applicable to the
earlier BC8500XLT. The BC9000XLT is a whole different scanner
and a top performer.

From: cardenas@kaiwan.com
Message-ID: <4ku0e5$s41@kaiwan.kaiwan.com>
Source record: 236056

REPOST

This is a KIT to both encode (send) and decode (receive) Speech Inversion Transmissions at the same time (Full duplex)! Works for telephones too but requires 2 kits. Requires 9~12 Volts DC.

I would not recommend this kit for newbes. Should assemble in less than 2 hrs.

$39.95 from:
JRD Microdevices
1-800-538-5000 (sales only)
1-408-494-1400 (technical talk)
*Be sure to ask for the GREAT catalog, new issue in about 2 weeks.

73's
Uncle T.
WA6IGJ

Notes: I'm sure most users will attach the board directly to a scanner or ? If you desire, patch the Input/Output directly to your sound card. This device requires no software.

I beleive FCC Part 97 (97.113) prohibits the use of scramblers on the ham bands. I know of no regulations that prohibits use of the device on Citizens Band.

Brent,

I think you've got it. Very nice data! I didn't even think of Parking E.
You may or may not know that Parking Enforcement in the City of LA is a
multi-multi-million dollar money maker.

They have two jet-helicopters they use just for spotters for the ground
troups. They go nuts just as the posted times for no parking take effect.
I had two friends that worked for a OPG (Official Police Garage) in
Southbay. They could snatch-up a car in about two minutes flat. I am
reminded of the movie, Gone In Sixty Seconds.

I highly doubt you will find CTCSS or DCS or much of anything
similar...it is a trunked system after all. I am not aware of a
single trunked system in operation that uses a PL tone. Most of the
Motorola and/or Ericsson techies will tell you that it can't even be
done.

a> I've been doing exactly that since I bought one two years ago. No need
a> for special "packs"

What happens when your batteries run down, and you CAN'T recharge (major disaster, or just not near the charger)?

I have a spare battery pack for each of the 3 handhelds I have (2 extras for the Ham HT), just in case I ever need them.

There are several Spreadsheet programs available for most unix
flavors. If your running Linux there is a very well done spread sheet
(Lotus like) called Wingz .. I can't recall where it is off hand. I
think I got it from either sunsite.unc.edu (/pub/Linux/...) or from
tsx-11.mit.edu (/pub/linux/...).

There is also an X interface for mSQL (again for Linux). If you know
dBase 3+ or dBase 4 there is a very good clone for Linux called DBMAN
5. This is commercial.. and I can't recall the price. I think it's
about $150USD. It allows you to compile your dbase code into
executable code. For this call Versasoft Corp (408) 723-9044.

Cheers!!!

1106. BC9000XLT Sensitivity

Newsgroup: rec.radio.scanner
Date: 1996-04-14 00:00:00 UTC
From: tatkins@unix1.sncc.lsu.edu
Message-ID: <4kr60n$5fnj@unix1.sncc.lsu.edu>
Source record: 236146

There has been some talk in this group lately about the BC9000XLT versus other units, and something was mentioned a while back about sensitivity. I am wondering if anyone else besides the original poster has had problems with the 9000's sensitivity. I suppose I am too much of a newbie to make any comments on that and further, I really don't have much to compare it to other than a BC200XLT. Could someone give a good definition of sensitivity as it relates to scanners, and then compare the BC9000XLT's sensitivity with other radios in its class like the RS 2035 or 2006 or whatever.

Bottom line from my emotional side: Don't tell me my radio ain't sensitive, dammit, I spent $400 on it and I love it.

Thanks,
T

>gave away the fact they were intentionally writing ticket just to make money?

Not likely as (returning to earlier thread) (1) I can't listen to such
traffic in the UK and (2) there wouldn't be any. I will bear it in mind
if I'm ever in the States. I gather frequency lists for police etc are
officially available to you, but is the growing use of trunked systems
and encryption making it difficult to follow what's going on?

(Perhaps a new subject is needed for this?)

If it were totally illegal to listen, every scanner owner would be guilty. It's well-known that even the "blocked" scanners have some ability to pick up cellular, and some are pretty good at it. If you just start scanning frequencies, the chances are real good you're going to find a cell call somewhere, even though not directly tuned to it.

: found a way to boost their income by writing out speeding or other
: traffic tickets. If they could there would no doubt be far tighter
: enforcement!

In many places in the US, "speed traps" are set for the primary purpose of generating revenue. Of course, this is not the official line, but it's why they often do it. Locations are chosen where motorists have a natural tendency to break the limit, although they are still driving responsibly.

A couple of years ago, I was a victim of a scam where I was set up to make an "illegal" left turn. The intersection was set up with a large green light in the left lane, and a *very* small sign saying "left on arrow only". The car in front of me turned, and the cop pulled both of us over. However, the one in the car in front of me was in cahoots with the cops because although the cop talked to him, I never saw the guy get handed a ticket. The car was a "setup" to make the guy behind him (me) turn.

Fine money goes in many cases into the coffers of the city which runs the police force. I've heard stories of small towns in Texas where the police force is funded almost entirely from traffic ticket revenue.

Yeah, and in order to make this "on topic", has anyone ever heard on their scanner about cops talking about speed traps. Like any idle chatter which gave away the fact they were intentionally writing ticket just to make money?

Generally speaking, the laws vary from state to state (and NY is one of the states that has a no vehicle scanner law). If you have the scanner in the car, and it is not connected to the car in any way (no antenna hook ups and no power cord to even the cigarette lighter), you can always say you were just trasnporting it. Make sure it's off if you get stopped. Finally, how many folks get stopped for this anyway? Just don't do anything that will increase your probability of being stopped and you should be OK.

I have been using my BC200 for about 18 months, and whenever I am in the car, it gets plugged in. So far, the only problem I have had is that the 3 amp fuse will occassionaly pop, usually when the hot tip touches the cellphone mount I use. The other thing you can do if you are handy, is find an unused fuse in your fusebox, and connect the power lead to that so you don't have to keep the lighter plug filled.

The opti isn't a scanner it is a frequency counter It counts whatever
frequency is 10 to 15db above the background and the sends that info
to the AR8000's tuning curcuit. basicly what it does is instantly lock
on to the stongest signal and tunes your scanner. With it yopu don't
need to know the frequencies ahead of time.

1119. Computer control on RS scanners

Newsgroup: rec.radio.scanner
Date: 1996-04-14 00:00:00 UTC
From: slwork@netcom.com
Message-ID: <slworkDpu27I.Cuz@netcom.com>
Source record: 236159

I have a few questions.

1) Are the 2005/2006 2035/2042 the only RS scanners which can easily be adapted for computer control? What about handheld ones like the PRO-25?

2) How much do the OS454/OS535 which are installed in the above scanners cost?

3) How much do you have to spend on software in addition to the cost of the OS454/OS535 to get basic functionality.

4) Does installing the above require you to do anything risky to the scanner, such as unsoldering components?

1120. Re: PRO 2035

Newsgroup: rec.radio.scanner

Opto Electronics has their OS 535 interface which provides an RS232 interface. Other people sell software for it. The OS535 kit has several sample programs included.
It also decodes DTMF(all 16), DCSS etc.
Bill Cheek, in his 'Ultimate Scanner' book, has increased # channels(which you won't need w/ a computer interface), and a 'data squelch' mod.

No this is NOT the COMSEC board,the COMSEC board does NOTHING for the BUZZ SAW noise we have on our GE sytem.

Reports so far are this new whiz board does work and it can be put in handhelds.

Bob, did you ever figure out the use of those strange features you dug up with the BC220/230? If you hold down MANUAL and DATA and then hit MANUAL (as I recall), you get some other strange info.

Based on past experience, Michigan has a strict law on mobile scanners in autos. Only emergency personnel and licensed hams (w/ a State Police permit) can have them...I believe Indiana is the only other state to have sucj a lwas as well.

Price is $400.00 US plus shipping.

The MVT 8000 is 200 channel ac/dc scanner with a mounting bracket for mobile use and comes with a cigarette lighter adapter although it can be hard wired.

It covers 8 Mhz to 1300 Mhz (continuous without blockage) and receives in WFM, NFM and AM. Frequency steps are 5,10,12.5,50 and 100 Khz.

It's got a 10 band search function, pass memory function, and other goodies found in high-end
scanners.

That you again, Joe?

A guy who works at the Bayonne Military Ocean Terminal posted info
about their new VHF repeater on the WUN (HF ute) newsgroup. He was
apparently involved in the installation of the repeater. I didn't pay a
lot of attention to the info because it didn't pertain to HF & I'm too
far away to hear the VHF signal.

A few days later, the same guy played dumb and made a Usenet post here
similar to the above one, asking if anyone had any info on the new
repeater, and if so, to please email him signal strength info & type of
traffic heard.

Crazy....

If that is the case then obviously the rules have been changed to suit
someone (I wonder who !).
FIDO and most of the other PC nets have been hurting of late since the
large move of many BBSers to the Internet...I suppose "anything goes"
on the nets at this point.

You've always been known as a BC croonie anyway. No disputing that
he has helped people with their scqanner mods but I have a problem with
his attitude and funny way of twisting things.

HD> >I was just informed by my FIDOnet SYSOP that I have been banned from the
HD> >ScanRadio echo for 90 days at which time I may regain access by
HD> >announcing a public apology to Bill Cheek. (Not likely !)

BC> Then consider the eviction *permanent*. :-))

And what would you expect as an apolopy, Mr.GOD ?
"I'm real sorry for pissing you off...please, reinstate my access ?"
Hahahahaha ! Yes, I suppose I will have to consider it permanent.
I don't consider this a great loss. Just like scanner mods vs. modern
scanners...Fido, NANET and other PC BBS nets are going the way of the Dodo
bird due to the huge shift of interest towards the Internet.
(You know how it is...just like your effort to flog another book using
reguritated material from your old books !)

HD> >You see, I have a problem with his advertising on a supposed
HD> >non-commercial echonet and have expressed this to him several times.

BC> And you were advised to remain ON TOPIC several times......

I don't recall ever recieving any formal warnings from you or my FIDO
BBS SYSOP. However, if you consider "..you'd better watch it boy..."
to be a formal warning through previous dialog from you then I guess
I was informed.

HD> >I made a comment about his latest business venture in response to a
HD> >message he posted. I guess he took it personally.

BC> Nope. You broke the rules one too many times. You knew the rules
BC> about flames, flaming, and staying ON-TOPIC. You broke 'em, and
BC> got a Size #13 crosswise on your sweet patooty for your efforts.

Oh no, here comes the prepubescent silliness and namecalling !
How old are you Bill ?
The requests were civil and ON TOPIC.

HD> >He is subtle about attempting to turn an advertisment into an
HD> >"information message" by sticking the "for more information...get in
HD> >touch with me this way..." Nothing more than an attempt to sidestep the
HD> >"No commercial advertising on the non-commercial FIDO echo" rule.
HD> >(Don't YOU dare try anything like this !)

BC> There are rules about that, too. You just don't READ the rules,
BC> or perhaps don't understand plain English.

Oh, then the rules must have changed since I recall there being no
advertising of any commercial nature in that particular echo.
Publishing a scanner mods book IS a business, isn't it !?

Admittedly, I haven't read the FIDO rules lately. I made the mistake
of assuming that they had not CHANGED.

HD> >I also find conflict of interest in his MODERTING the ScanRadio echo

BC> And so now you do not need to put up with it anymore. :-)) Look at
BC> it as if you were cut free!

To keep on track here...you seem to have nothing to say about this
obvious CONFLICT OF INTEREST. My going away will only make it more
comfortable for YOU. Make no mistake about it...like I said at the top,
I won't feel a loss. I just like to see the rules stay consistent for
everyone. It would also be nice if there was someone with a more objective
situation moderating the Scanradio echo.

HD> >..this is a guy who makes a living in the scanner business.
HD> >His latest antic has proven to me that pleasure and business don't mix.

BC> See above......

HD> >He used his power as moderator to boot me off the echo because I had a
HD> >personal beef with him..this should have no bearing on my place on the
HD> >echo.

BC> It didn't, cheese-fer-brains! You continually flaunted and broke
BC> the Rules. The FidoNet SCANRADIO echo is -=NOT=- a forum to voice
BC> personal beefs. You could have used e-mail or netmail, but to date,
BC> all I've heard from you is your nescient, prepubescent whining and
BC> sniveling in the public forums. You did it one too many times on
BC> the FidoNet SCANRADIO forum.

Oh no, more childish name-calling.
Continually broke the rules...oh yes. Every message that I posted must
have been a flame. Out of the dozen or so message that I post (most of
which are replies to technical queries) in a year, a couple of them were
oriented as civil requests for you to keep the commercial advertising down.

HD> >This is a prime example of the abuse that the conflict of interest
HD> >can harbor.

BC> Oh, do tell! :-)

Yes, CONFLICT OF INTEREST."Mr.Scanner Mods Book" himself doing the policing.

HD> >Don't be fooled by this bully...he plays the "do it my way or else"
HD> >game.

BC> True. I -=AM=- the moderator on the FidoNet SCANRADIO echo, and the
BC> topic of discussion IS and will continue to be SCANNERS AND SCANNING.
BC> Flaunt that rule or flame someone and you're gone. Like it or lump
BC> it, I guess. Just fish that "lump" out of your shorts and pitch it in
BC> the toilet, please.

(I'll disregard the diatribe of the last few lines.)
Yes, here comes GOD and his ego.

Its the Bill Cheek "do it my way or else" attitude and "I get to change
the rules on the fly to suit because I AM GOD (the moderator)" way of
running the show which has everything to do with this discussion.

HD> > And if you stand up to him he will verbally abuse you, call you
HD> >a liar and attempt to defame you.

BC> No, beanbrain, it is not a matter of "standing up". It is a matter of
BC> understanding and complying with the Rules.

Yet more name-calling :(
Just don't challenge Bill technically. If he doesn't kick you off the
FIDO echo he will start throwing verbal abuse at you and twisting the
context of the original message to save face.

HD> > He has a way with twisting the truth and getting people to side with him.

BC> Ha ha ha ha ha ha ha.....since when have I cared about choosing
BC> up sides? Looks like you're the one drumming up a train behind your
BC> butt. heh heh heh.....

C'mon now, you know you have a Jim Baker following !

HD> >Food for thought for all of you Bill Cheek croonies.
HD> >Hugh Duff VA3TO Toronto

BC> Food for thought for all those who sit on their duffs, I'd say.
BC> You got a beef, all right. You much prefer the anarchy of the
BC> Internet where you can snivel, whine, stammer, and bellow in public.
BC> So have at it! Unload! Drop your britches and cut loose! Take
BC> advantantage! Run me off, Mister Duff! Or get off your duff and run!
BC> +---+
BC> | Bill Cheek

Oh and I will if necessary ! However there's not much anarchy around
here Bill. We're all pretty much mature and rational folk. In fact,
things have been pretty tame around here with your silence. I just
had to blow off steam and express my anger about your actions with
respect to moderating the FIDOnet echo (I couldn't do it there !).
Most of the replies have in fact supported my beef with the exception
of the BC croonies who are known to be long time pillars of yours.
Just you run along to your dying FIDOnet "Bill Cheek Scanner Mods Book
Support Echo" and we'll both (all) be happy !

> haven't gone *your* way.
> Life is still rough.
> --
> Bill Funk - skypilot@starlink.com

So why don't YOU fill me in as to when the rules changed regarding
commercial advertising on the said FIDOnet conference !
Did they change to suit the latest moderator ? The last time I read
the rules there was to be no commercial advertising. (It wasn't THAT
long ago !)

In anycase, my beef has as much to do with Bill's "I'm the scanner God"
attitude as much as the original complaint. His supposed warnings to
me came in the form of verbal threat rather than formal requests to
refrain (from whatever my offense !?). He has a very abrasive
mannerism towards those who don't see eye to eye with him.
More reason above and beyond the obvious that he does not make for
the model echo moderator.

By the way, allow me to correct YOU (after attempting to correcting
me !). The word is actually spelled "crony". And I'm mistaken that
you are not !?!? You are one of several that run to BC's defense
anytime an issue like this arises.

I don't wish to make this the next Andy/Bill show, I just wanted to
vent my frustration of being suspended from the FIDO Scanradio echo
in the way of which it was handled. Lets spare the others from
dragging this on. I rest my case.

Regards,
Hugh Duff VA3TO Toronto

Hello fellow scanner nuts, here is a good one for you...

I was trying to get my Radio Shack Pro-46 into test mode by pushing the 2,9, l\o button. As I turned it on, the only thing that it did was give me 0 channels to scan through, and the keypad didn't work! It was reset easily by turning it off, but does anyone know how to get it into test mode? And secondly, what is the point of getting this particular radio into test mode anyway?

Please e-mail me at my new net address, I hope it works!

Greg.Miller@hamlink.mn.org

Date: 1996-04-14 00:00:00 UTC
From: asi@escape.ca
Message-ID: <asi.564.003E5424@escape.ca>
Source record: 236184

Okay its been a long time since checking into this newsgroup but I was
wondering if there was any new information on tracking cell phones???

I want to monitor phones based on esn/min information.

I own a Pro-2006 but do not want to mod the scanner.
I own a Pro-43 but to not want to mod the scanner.

So Should I buy a OKI 900?

Did anyone ever modify Celltracker to work on AMPS??

Peace from Canada.

Any information will help!

Hello,
I use mine in the car all of the time. If it's in the car I keep it
plugged it. If I leave it in for a week or so I will just unplug it and
do a max drain on the battery. One thing you may wish to do is get rid of
the 15 second turn off on the light. I modified mine to stay on all of
the time, it's great at night.

Yeah, well that's what his boss is saying. They won't let you use any
electronic equipment during takeoff and landings. But they do let you use
them when you're in the air. Except for cell phones and a few others. I
don't know if scanners are included. Your best bet would be to call
United and ask them.

The last time I checked only a few states expressly prohibited all mobile scanner reception. I seem to recall that Oklahoma expressly prohibited the use of scanners in order to violate the law. I also think that most any state could make a case under general obstruction of justice statutes against the use of scanners to evade the law.

Since I am a lawyer, I must add that this is ** not** to be construed as legal advice. Besides, I haven't given you good enough information on the subject anyway.

I'll see if I can find something more definite.

1152. AOR 2500 Receiver 4 Sale

>: concept!!!
>
>GET REAL! Where do you think the main source of Officer's Wages comes
>from. From Fines and Levies for Speeding.

In the UK the money from fines goes into central Government funds, not
direct to the police force which issues the tickets. Although policing
is funded partly (about 50%) from central funds I don't think they've
found a way to boost their income by writing out speeding or other
traffic tickets. If they could there would no doubt be far tighter
enforcement!

>
>

And also don't be tempted by the new pack offered by
RS(23-288). It may just work fine, but at $35 it is a bit steep.
Especially considering the fact that the "charging stand" it comes
with still needs the external charger you would use if you charged
regular ni-cads inside the scanner. The only benefit I could see from
this is if you absolutely need to be able to switch your batteries
instantly and charge the dead ones while listening on the new pack. I
will admit, this is a good trick with regular ni-cads inside the
scanner if you intend to walk more than the length of the charging
cord with the scanner.:-) So maybe there is an aplication for
something like this for some people after all. Oh well.
Just my $.02

Hi all!
I was wondering if anyone knows of a database program for recording and organizing scanner freqs. that will run on a Unix machine. I would prefer a program that would run under X-windows, but as long as it will run on Unix, that's ok.
Please E-mail if you can help me...I don't read news often.

Thanks!!
-Greg

If that is the case then obviously the rules have been changed to suit
someone (I wonder who !).
FIDO and most of the other PC nets have been hurting of late since the
large move of many BBSers to the Internet...I suppose "anything goes"
on the nets at this point.

You've always been known as a BC croonie anyway. No disputing that
he has helped people with their scqanner mods but I have a problem with
his attitude and funny way of twisting things.

HD> >I was just informed by my FIDOnet SYSOP that I have been banned from the
HD> >ScanRadio echo for 90 days at which time I may regain access by
HD> >announcing a public apology to Bill Cheek. (Not likely !)

BC> Then consider the eviction *permanent*. :-))

And what would you expect as an apolopy, Mr.GOD ?
"I'm real sorry for pissing you off...please, reinstate my access ?"
Hahahahaha ! Yes, I suppose I will have to consider it permanent.
I don't consider this a great loss. Just like scanner mods vs. modern
scanners...Fido, NANET and other PC BBS nets are going the way of the Dodo
bird due to the huge shift of interest towards the Internet.
(You know how it is...just like your effort to flog another book using
reguritated material from your old books !)

HD> >You see, I have a problem with his advertising on a supposed
HD> >non-commercial echonet and have expressed this to him several times.

BC> And you were advised to remain ON TOPIC several times......

I don't recall ever recieving any formal warnings from you or my FIDO
BBS SYSOP. However, if you consider "..you'd better watch it boy..."
to be a formal warning through previous dialog from you then I guess
I was informed.

HD> >I made a comment about his latest business venture in response to a
HD> >message he posted. I guess he took it personally.

BC> Nope. You broke the rules one too many times. You knew the rules
BC> about flames, flaming, and staying ON-TOPIC. You broke 'em, and
BC> got a Size #13 crosswise on your sweet patooty for your efforts.

Oh no, here comes the prepubescent silliness and namecalling !
How old are you Bill ?
The requests were civil and ON TOPIC.

HD> >He is subtle about attempting to turn an advertisment into an
HD> >"information message" by sticking the "for more information...get in
HD> >touch with me this way..." Nothing more than an attempt to sidestep the
HD> >"No commercial advertising on the non-commercial FIDO echo" rule.
HD> >(Don't YOU dare try anything like this !)

BC> There are rules about that, too. You just don't READ the rules,
BC> or perhaps don't understand plain English.

Oh, then the rules must have changed since I recall there being no
advertising of any commercial nature in that particular echo.
Publishing a scanner mods book IS a business, isn't it !?

Admittedly, I haven't read the FIDO rules lately. I made the mistake
of assuming that they had not CHANGED.

HD> >I also find conflict of interest in his MODERTING the ScanRadio echo

BC> And so now you do not need to put up with it anymore. :-)) Look at
BC> it as if you were cut free!

To keep on track here...you seem to have nothing to say about this
obvious CONFLICT OF INTEREST. My going away will only make it more
comfortable for YOU. Make no mistake about it...like I said at the top,
I won't feel a loss. I just like to see the rules stay consistent for
everyone. It would also be nice if there was someone with a more objective
situation moderating the Scanradio echo.

HD> >..this is a guy who makes a living in the scanner business.
HD> >His latest antic has proven to me that pleasure and business don't mix.

BC> See above......

HD> >He used his power as moderator to boot me off the echo because I had a
HD> >personal beef with him..this should have no bearing on my place on the
HD> >echo.

BC> It didn't, cheese-fer-brains! You continually flaunted and broke
BC> the Rules. The FidoNet SCANRADIO echo is -=NOT=- a forum to voice
BC> personal beefs. You could have used e-mail or netmail, but to date,
BC> all I've heard from you is your nescient, prepubescent whining and
BC> sniveling in the public forums. You did it one too many times on
BC> the FidoNet SCANRADIO forum.

Oh no, more childish name-calling.
Continually broke the rules...oh yes. Every message that I posted must
have been a flame. Out of the dozen or so message that I post (most of
which are replies to technical queries) in a year, a couple of them were
oriented as civil requests for you to keep the commercial advertising down.

HD> >This is a prime example of the abuse that the conflict of interest
HD> >can harbor.

BC> Oh, do tell! :-)

Yes, CONFLICT OF INTEREST."Mr.Scanner Mods Book" himself doing the policing.

HD> >Don't be fooled by this bully...he plays the "do it my way or else"
HD> >game.

BC> True. I -=AM=- the moderator on the FidoNet SCANRADIO echo, and the
BC> topic of discussion IS and will continue to be SCANNERS AND SCANNING.
BC> Flaunt that rule or flame someone and you're gone. Like it or lump
BC> it, I guess. Just fish that "lump" out of your shorts and pitch it in
BC> the toilet, please.

(I'll disregard the diatribe of the last few lines.)
Yes, here comes GOD and his ego.

Its the Bill Cheek "do it my way or else" attitude and "I get to change
the rules on the fly to suit because I AM GOD (the moderator)" way of
running the show which has everything to do with this discussion.

HD> > And if you stand up to him he will verbally abuse you, call you
HD> >a liar and attempt to defame you.

BC> No, beanbrain, it is not a matter of "standing up". It is a matter of
BC> understanding and complying with the Rules.

Yet more name-calling :(
Just don't challenge Bill technically. If he doesn't kick you off the
FIDO echo he will start throwing verbal abuse at you and twisting the
context of the original message to save face.

HD> > He has a way with twisting the truth and getting people to side with him.

BC> Ha ha ha ha ha ha ha.....since when have I cared about choosing
BC> up sides? Looks like you're the one drumming up a train behind your
BC> butt. heh heh heh.....

C'mon now, you know you have a Jim Baker following !

HD> >Food for thought for all of you Bill Cheek croonies.
HD> >Hugh Duff VA3TO Toronto

BC> Food for thought for all those who sit on their duffs, I'd say.
BC> You got a beef, all right. You much prefer the anarchy of the
BC> Internet where you can snivel, whine, stammer, and bellow in public.
BC> So have at it! Unload! Drop your britches and cut loose! Take
BC> advantantage! Run me off, Mister Duff! Or get off your duff and run!
BC> +---+
BC> | Bill Cheek

Oh and I will if necessary ! However there's not much anarchy around
here Bill. We're all pretty much mature and rational folk. In fact,
things have been pretty tame around here with your silence. I just
had to blow off steam and express my anger about your actions with
respect to moderating the FIDOnet echo (I couldn't do it there !).
Most of the replies have in fact supported my beef with the exception
of the BC croonies who are known to be long time pillars of yours.
Just you run along to your dying FIDOnet "Bill Cheek Scanner Mods Book
Support Echo" and we'll both (all) be happy !

>25-1000Mhz and will recieve them at about 0db gain.

A little theory here...

A discone functions as a truly broadband antenna whose low frequency limit is determined by its size. The cone diameter at its base and the cone element length are both equal to 110% of a quarter wavelength at the discone's lowest frequency, and the disc diameter is equal to 66% of a quarter wavelength at the discone's lowest frequency. This means that a discone which _REALLY_ covers all bands down to 25 MHz would have a disc diameter of 6.23 feet, and a cone diameter and cone element length of 10.3 feet.

Clearly, the so-called "25-1000 MHz" discones sold for scanner use do not come close to these dimensions. They are actually cut for a low frequency of about 130 MHz. In an attempt to improve low band performance, a base-loaded 50 MHz 1/4 wave whip is attached to the top of the disc. The performance of such a whip is limited by two factors:

1) The whip will be resonant over a very narrow frequency range; probably less than 1 MHz.

2) A 1/4 wave whip must be mounted on an effective ground plane or 1/4 wave "counterpoise" to operate properly. The whip alone is really only half the antenna.

The scantenna contains a full half-wave dipole element tuned somewhere in the 30-50 MHz band. It too will only be resonant over a very small portion of the band, but will still represent a substantial improvement over the discone in the rest of the band as well. However, a discone which is truly designed for 25 MHz would effectively cover the entire 30-50 MHz band, and would certainly outperform the scantenna (except perhaps at the scantenna element's resonant frequency).

A discone typically has a decade of frequency coverage above its low frequency limit. This means that a discone with a low frequency limit of 25 MHz would likely have a high frequency cutoff of about 250 MHz. The scanner discones are able to cover up to 1300 MHz because their low

frequency limit is really 130 MHz. The shape of the antenna's base bracket and the type of coaxial connector used may also affect its high frequency limit, especially in the bands above 800 MHz. (One can't help but wonder about a manufacturer's claim that an antenna covers up to 1000 MHz when it uses a PL-259 connector.)

A discone's radiation angle also increases as one gets closer to the high frequency limit. For this reason, a discone with a low frequency limit of 400 MHz is likely to work better at 450 MHz than a discone with a low frequency limit of 100 MHz.

>The Scantenna works well for the bands it is tuned for 30-50Mhz, 100-174Mhz
>and 380-512Mhz and will have up to 4db gain in these bands...

Such gain figures are useless unless we know what they are referenced to. Even then, antenna manufacturers are notorious for exaggerating gain figures. I wouldn't put much faith in any such figures without knowing the exact conditions under which the measurements were taken.

>Therefore if what you want to listen to is located in these bands then use
>the Scantenna but if you want to listen to stuff located outside of these
>bands then use a good Discone (like the Diamond D130J).

You will probably find that the Scantenna does indeed outperform the discone in many of the most popular bands, but will perform poorly in ranges where it does not have any resonant elements. The discone's main strength is that there will not be any coverage "gaps" where it becomes near-deaf.

From: Dave Shaffer <DCS4@psuvm.psu.edu>
Message-ID: <96105.100051DCS4@psuvm.psu.edu>
Source record: 236242

I've had a bc200 xlt for a couple of years now and I keep it with me in the car almost all the time. I had gotten into the habit of bringing it into the house every few days to recharge the batteries, and it seems to have adjusted to this schedule pretty well.

I was making some other changes in the auto-electronics recently, so I took the cigarette lighter adapter and ran the power cord under the carpet so it comes out between the front seats of my Chevy Lumina. I can now power the scanner directly from the car.

I'm curious about the set-up though, and thought perhaps others out there might be doing the same thing. Should I keep the unit powered from the vehicle all the time? Should I connect it only when it is on in the car? Or should I follow a pattern similar to the one I had been using, connecting it and powering it from the vehcile to charge the nicads just once or twice a week?

A "BC croonie"?? I can't sing worth a lick. I suspect you mean "croney".
In that, you are also mistaken.
However, as you say above, you haven't read the rules, so you can't really
comment on whether or not they've been changed, or what they actually
say. Which means you have no complaint, except to say that things
haven't gone *your* way.
Life is still rough.

The rules were *clarified* to suit the best interests of the forum,
Duff. It is your problem if you failed to read and comprehend the
rules. It was never your responsibility or duty to challenge either
the rules or the Moderator in public. Your duty was to stick to the
established topic of Scanners and Scanning. Simple, really, but you
failed and got yourself hosed for the time and trouble. Ta da....

>FIDO and most of the other PC nets have been hurting of late since the

The rules were *clarified* to suit the best interests of the forum,
Duff. It is your problem if you failed to read and comprehend the
rules. It was never your responsibility or duty to challenge either
the rules or the Moderator in public. Your duty was to stick to the
established topic of Scanners and Scanning. Simple, really, but you
failed and got yourself hosed for the time and trouble. Ta da....

>FIDO and most of the other PC nets have been hurting of late since the
>large move of many BBSers to the Internet...I suppose "anything goes"
>on the nets at this point.

"Anything" does not "go" on the Fido SCANRADIO echo as you aptly
learned the hard way.

For the record, I have also received numerous threats from Bill Cheek.
He used to email me and tell me to "watch my back" and "keep my eyes open"
because"interesting things will be happening". This was interspersed with
his usual amount of profanity. Thankfully, he's been largely absent from
this forum lately. Probably working on his next re-hash of his first
book..... :)

>And what would you expect as an apolopy, Mr.GOD ?

I am Mr. Cheek to you. And no apology is expected (or desired).

>"I'm real sorry for pissing you off...please, reinstate my access ?"

Tough. But no.....

>Hahahahaha ! Yes, I suppose I will have to consider it permanent.

Correct. You have no other viable choice.

>I don't consider this a great loss.

Funny, but neither do I.......... :-) You never contributed aything
to the arts and sciences of scanners and scanning just as you do not
contribute HERE either.

>(You know how it is...just like your effort to flog another book using
> reguritated material from your old books !)

No, I don't know how it is, Duffster. Perhaps you will show me in
whatever book(s) you've written? I learn best by example. Please
direct me to your accomplishments and fruits of education and labor!

>HD> >You see, I have a problem with his advertising on a supposed
>HD> >non-commercial echonet and have expressed this to him several times.

>BC> And you were advised to remain ON TOPIC several times......

>I don't recall ever recieving any formal warnings from you or my FIDO
>BBS SYSOP.

I can't help your poor recollective powers. The rules were posted;
you were warned; and you failed to abide. That's a personal problem
for you and your shrink to dissect and resolve.

>However, if you consider "..you'd better watch it boy..."
>to be a formal warning through previous dialog from you then I guess
>I was informed.

You were not informed with anything like that. But it doesn't matter.
You are "persona non grata", simple as that. You do nothing for the
hobby and interest of scanners and scanning anyway. In effect, you
are "persona non grata" in this forum as well. Prove otherwise, if
you dare, and if you are capable.........

>HD> >I made a comment about his latest business venture in response to a
>HD> >message he posted. I guess he took it personally.

>BC> Nope. You broke the rules one too many times. You knew the rules
>BC> about flames, flaming, and staying ON-TOPIC. You broke 'em, and
>BC> got a Size #13 crosswise on your sweet patooty for your efforts.

>The requests were civil and ON TOPIC.

There were no "requests" from you. Your inflammatory attacks were
uncivil and off-topic, and you got booted for your time and trouble.
Again, the matter is exceptionally clear and simple. You have a load
in your britches and this forum is your dumping ground. No?

>HD> >He is subtle about attempting to turn an advertisment into an
>HD> >"information message" by sticking the "for more information...get in
>HD> >touch with me this way..." Nothing more than an attempt to sidestep the
>HD> >"No commercial advertising on the non-commercial FIDO echo" rule.
>HD> >(Don't YOU dare try anything like this !)

>BC> There are rules about that, too. You just don't READ the rules,
>BC> or perhaps don't understand plain English.
>
>Oh, then the rules must have changed since I recall there being no
>advertising of any commercial nature in that particular echo.

The rules were clarified, yes. But then YOU are not and never were
the moderator. It was never your business or on-topic for you to
attack the policies and rules, much less, me.

>Publishing a scanner mods book IS a business, isn't it !?

Publishing is business, yes. The mods are information. The
information is not a business. And, I am *not* the publisher of my
books.

>Admittedly, I haven't read the FIDO rules lately. I made the mistake
>of assuming that they had not CHANGED.

A most grievous error on your part. Pity..... But the Rule on
flames and atacks and moderating by non-moderators had NOT changed.
You victimized me in your scathing attack, and the Rules victimized
you for your time and trouble. (yawn.........)

>HD> >I also find conflict of interest in his MODERTING the ScanRadio echo

>BC> And so now you do not need to put up with it anymore. :-)) Look at
>BC> it as if you were cut free!

>To keep on track here...you seem to have nothing to say about this
>obvious CONFLICT OF INTEREST.

There is no conflict of interest. You're just sniveling, whining, and
peeing in your pants again......

> My going away will only make it more comfortable for YOU.

Certainly it will!!! Don't YOU feel more comfortable after shoveling
up dogshit out of your yard? Geezus, dude, get a life.......
Everyone feels better when they clean up the little dog droppings from
their homes and nests. You were cleaned out and flushed. Dern tootin
I am more comfortable. You were never an asset to the forum anyway.

> Make no mistake about it...like I said at the top, I won't feel a loss.
> I just like to see the rules stay consistent for everyone. It would
> also be nice if there was someone with a more objective situation
> moderating the Scanradio echo.

Oh, the rules are consistent and applicable to all. They applied to
YOU, which is the problem now, huh? Clearly, you fail to understand
the FidoNet echo rules and philosophies. If you did, you'd start your
OWN echo to show me how it's done better! Hell, you'd write a book to
show me how to do it better. Pity all you've done is pee your pants.

>BC> Food for thought for all those who sit on their duffs, I'd say.
>BC> You got a beef, all right. You much prefer the anarchy of the
>BC> Internet where you can snivel, whine, stammer, and bellow in public.
>BC> So have at it! Unload! Drop your britches and cut loose! Take
>BC> advantantage! Run me off, Mister Duff! Or get off your duff and run!

>Oh and I will if necessary ! However there's not much anarchy around
>here Bill. We're all pretty much mature and rational folk. In fact,
>things have been pretty tame around here with your silence. I just
>had to blow off steam and express my anger about your actions with
>respect to moderating the FIDOnet echo (I couldn't do it there !).

That's right. You CAN'T do it there. Neither can I. But I can aptly
point to that growing bulge in the seat of your britches here. It's
about time you run back to your Mammy and get them sorry, stinking
britches changed, ain't it? After all, if you are such a rule-abiding
and great human being, why do you fail to respect the topical flow of
this forum? It's for scanners - NOT blowing off your steam at me.
What you're doing HERE is what you did in FidoNet. There's no
difference at all. Except that you can't get booted from here so
easily, eh?

>Most of the replies have in fact supported my beef with the exception

Ha ha ha ha ha.......wheeeeeeeeeeeeeeeeeeee! Indeed, our fine
feathered Peter J. Breath is supportive of you. He likes you. :-)
Perhaps you and "she" ought to get "connected"....

You have to watch what you buy from them, the stuff werks but the
question is, how good? I puchased a scrambler/descrambler from them
and it werks but it is far from perfect. definitly over priced for
it's performance...

You can go with any mobile scanner antenna or a small cone
I have both and keep them indoors. they both seem to werk very well if
you cannot mount something outside.

I have a cousin who flies left seat for United 757, 767 and DC-10's.
He tells me United does NOT allow scanners to be used on flights.
He says there was "two unexplained turns" made by aircraft with the only
likely explaination being electronic equipment.

This was about a year ago, so things may have changed. Last I heard it was
still being reviewed. I think I would ask the Captain anyway...

I'll second Bob's comments. Aside from some slight image problems, the
220 is as good as they come. Great audio, battery life, scan/search
speed, intermod rejection, service scan, data skip, search lockouts, etc.

1204. Unblocking AR8000

Newsgroup: rec.radio.scanner
Date: 1996-04-15 00:00:00 UTC
From: anon1723@nyx10.cs.du.edu
Message-ID: <4kud6h$epa@nyx10.cs.du.edu>
Source record: 235963

Can someone please provide some current information on unblocking AR8000's. I've tried sifting through old posts, etc. and still have confusion as to what the story is.

Are models currently on sale in the US unblockable by connecting the receiver to a computer and running Scancat Gold and downloading a new "bandplan"?

Is there any difference between US models and imported ones?

Are they planning a new version for the US which is harder to unblock, or is this just a figment of my imagination? If so, how do you tell them apart?

Does ANYONE have them in stock??? Will they ever?

>

Still, there is a ton of action that takes place over the air. Most large
metro police forces have turned to carrying a cellular - there are times
when it is prudent to use the phone rather than divulge sensitive info
over the air.

1206. For Sale : Realstic PRO 2006

Newsgroup: rec.radio.scanner
Date: 1996-04-15 00:00:00 UTC
From: jmapes@coredcs.com
Message-ID: <4kulbi$i1o@wiscnews.wiscnet.net>

Order yourself a copy of Radio Manager for Windows authored by Ben Saladino.
Besides being the only software that worked over and over for me it is also not
copy protected so that you can make a backup for yourself.

1209. DPL Detection

Newsgroup: rec.radio.scanner
Date: 1996-04-15 00:00:00 UTC
From: Clay Juckett <cjuckett@swsmail.atlanta.com>
Message-ID: <3173057A.CBD@swsmail.atlanta.com>
Source record: 235968

Is there a device that can DETECT a DPL when a radio is transmitting,
i.e. show the digital done that is being used?

Clay

1210. WTD. Info on regen. loop antennas

Newsgroup: rec.radio.scanner
Date: 1996-04-15 00:00:00 UTC
From: hi80@pipex.dial.com
Message-ID: <3172dedf.20894200@news.dial.pipex.com>
Source record: 235969
Cross-posted to: rec.radio.shortwave,alt.radio.scanner,alt.radio.scanner.uk,rec.radio.scanner

Does anyone have any info on loop antennas similar to the KIWA MW design?. Unfortunately I can't afford 350 UKP, so any circuit diagrams or info on this design would be helpful, as it looks like I'll have to build one.ALso, does anyone in the UK have any idea of where to get the c. 50cm diameter sections of tube or pipe needed to build a design like the KIWA. I've tried builders merchants, etc, to no avail. Thanks in advance for any help

1211. Wtd: INFO ON RADIO CONTROL SOFTWARE

Newsgroup: rec.radio.scanner
Date: 1996-04-15 00:00:00 UTC
From: hi80@pipex.dial.com
Message-ID: <3172def9.20920912@news.dial.pipex.com>
Source record: 235970

I'm looking for software to control an NRD 535. preferably with
Spectrum Analysis;any ideas of where I can find it, or please send by
email
Thanks in advance

1212. CCR708A (Scanner) - Am I Alone?

Newsgroup: rec.radio.scanner
Date: 1996-04-15 00:00:00 UTC
From: Tony Dowden <dowden@earthlink.net>
Message-ID: <3172D394.60FD@earthlink.net>
Source record: 235971

I have a Standard CCR708A scanner with a built-in spectrum display. Although its frequency range is somewhat limited (50-905) the spectrum display has been a real plus in searching for new stuff.

My only complaints are that it's sensitivity, especially on the spectrum display, are less than I expected, and that there seem to be no others out there using one. I'm a hardware hacker at heart, and I enjoy getting in there and burning something (solder only - hopefully). So, are there others out there using this scanner, and do you have any mods you'd like to share? I have none as yet, but I'll happily share whatever I do receive.

Tony

NOPE... Unless you do it like a "scanner" and use conventional channels

I do my share in the hobby of Amateur Radio thank you very much Bill.
I have "Elmered" (encouraged and taught) many budding amateur radio
operators into getting their licence. I have taught Morse code and advanced
level radio theory. (Got your ham licence !?!?)

I have written several published product reviews for radio related
magazines. I have written construction and tech. articles for some
radio related technical journals.

I designed, wrote the firmware for and built computer interfaces,
infrared remote controllers and other mods for scanners for which
I have passed the documentation around... GRATIS !! I have helped
many local scanner enthusiasts perform modifications on their equipment.
Shall I go on !?!?
Aside from the publications where I have writtten material (you wouldn't
know about them) I don't sell books for profit though...perhaps that is
why you are not aware of MY accomplishments in the hobby of radio.

What are some of the advangates of the AR8000 over the 2700? I know about the wider range (1900 vs 1300) and more channels. What are some of the other things about the 8000? Is the computer interface on the two comparable?

Source record: 235977

In the past 4 days I have received no less than 23 requests for a return of The Daily Cheek Digest. For those of you who dont know about it, the Digest is a handy compendium of the most hiarious, outrageous, or outright lies of Bill Cheek, who has apparently not yet gotten the message that he and his advertisements are not wanted here. The Digest is a convenient way to avoid reading all of his postings in their entirety, which tend to get tedious and redundant. Its done for you, and you simply get the "best of" the snip 'n clip tinkerer. Please use email to respond.....

Do you have a Regency TS (Turbo Scan) 800?
(The model number is TS-2)

The model I owned had 75 channels, and six banks.

The radio was made some time ago, probably back in the mid to late 1980's.

A long time ago, something caused the radio to break. Now when power
is applied to the radio it beeps once, and nothing more. No scanning
line, no frequency, nothing.

Giving up on the radio I put it aside and now for some reason I want
another. (I can't find anyone who wants to or knows how to fix it)

If you have a radio similar to this model or know someone who does,
I am interested in purchasing it. Please contact me.

Bart--

Got a couple of questions for you:

1. If you had to choose on a scale of 1-10, how well does the
mod increase s/w performance (utilities, etc.)?

2. Is this mod something you came up with or did you buy it
commercially?

3. With the mod installed, is it still worth purchasing a dedicated
comm's receiver, or does the mod rival a receiver in the $500 price
range?

Thanks,

Jeff

I am looking for a used handheld, continuous coverage scanner for around $250.
I have seen Icom R-1s, AOR 1000s and 1500s, that fit these requirements.
Should I go with one of these, or should I save for a MVT-7100 or AOR 8000?
I go to school in the UP of MI, and live near ST. Paul, MN if this makes any
difference. Any opinions would be appreciated. Also, if you have any of these
scanners for sale, please email me. Thank you.

IFR 1600CSA, 35,000.00, WILL DO AMPS, NAMPS, TDMA. Follow from cell to cell as long as you are in range of the cells. Capture by ESN or phone number. Converts TDMA to analog voice. Nice box.

1232. Best scanner antenna for apartment.

Newsgroup: rec.radio.scanner
Date: 1996-04-15 00:00:00 UTC
From: flashbyt@shore.net
Message-ID: <4ks758$i02@shore.shore.net>
Source record: 236069

I wondering if anyone has any suggestions for a scanner antenna meant
for apartment use. I live on the third floor and have a good balcony. I
cannot mount a permanent antenna on it but I could put one out on it when
I use the scanner. (apartment regulation)
I would prefer to build one myself because I find it fun, but I am not
at all good at it so I'm looking at both homebuilt and factory made
options. Currently I have a whip Hustler I bought for the car that runs
about 3 feet or so and works great in the car.
I am interested in the 800 MHZ mostly followed by 400 and 150. But an
all around antenna would be great also.
Any ideas and/or experience to guide me? Thanks.

>Any suggestions?

Yep, here is my suggestion. Here in Australia the charger that came with the AOR1000 only supplied 6v. Within days of purchasing it, I came across the same problem of the batteries not charging.

Solution: As was suggested to me, obtain a 12 volt wall plug pack (or whatever you call it in the States) and charge it for 12 or so hours at 12 volts. You will find the unit will perform for something like 5 to 7 hours depending on the useage of the unit.

Have fun.

I have been using Radio Shack's standard 'AA' NiCads in my PRO-51, same set for almost 2 years with great performance. About 12 hours of usage per charge.
The PRO-51 also allows for "in unit" charging so I don't have to take them out to charge them.

Might I point out that here in Kondon, we have the Green Madia.
A private company able to give parking tickets. Its self
financing, with a percentage of the fines going to the local
coubcil. This is the way it is going. Traffic offences will be
next, if the present Government is still in power.

I have heard them on UHF. Sureway Parking as I recall. Not sure
on the frequencies though.

I have a Yupiteru MVT 7100. I just noticed that there is an MVT 7200.
Can anyone tell me the difference between the two. The 7200 comes in a grey
case (vs black) and also has a rubber duckie antenna vs a retractable
metal one. Those are the cosmetic differences I noticed. Any differences
inside in the electronics?

Thanks,
Gary

You can make the light on the 7200 stay on, and it is amber rather than
green. It also has a narrower filter, which makes SW listening much more
possible. Oh yeah, and one more important difference: the MVT-7200 is
IMPOSSIBLE to get...

I'm still trying to decide what antenna I should go with in a third story apartment....

I read recently in a Ramsey catalog that an active antenna is an excellent choice for apartment dwellers...any truth to this?

Any responses/experiences greatly appreciated.

Lucid on Mir; 4X6KJ visits ARRL HQ; OEM1M
commemorates International Marconi Day;
RF Design moves; Pupils mark decade of
School Club Roundup; 1996 AMSAT confab set

FCC OKAYS OLYMPIC CALL SIGNS FOR HAMS OPERATING IN GEORGIA

Hams operating within the state of Georgia may use special call signs from April 15 until August 31, 1996, to commemorate the 1996 Olympics, under a Special Temporary Authority issued by the FCC. Here's how it works: An FCC-licensed radio amateur operating in Georgia with a "4" in his or her call sign may replace that number with "96" (representing the year) or "26" (commemorating the 26th Olympiad) during the period of the STA. Hams with any number in their call signs and operating within the State of Georgia may add "00" to the existing number (to mark the centennial year of the Olympic Games). So, WA4BKD in Georgia also could identify as WA96BKD, WA26BKD or

WA400BKD, while NG3K, when operating in Georgia, could identify only as NG300K or as NG3K. The Olympics start in July. The STA stemmed from an initiative by James Altman, N4UCK, of Atlanta and the Georgia Amateur Radio Operators Group he organized, with the support of ARRL.

FCC: INTERFERENCE PROBLEMS OFTEN START AT THE FACTORY

The FCC says it cannot resolve most of the thousands of complaints of interference to TVs, radios, stereos and televisions "because the cause of this interference is the design or construction of these products and not a violation of any FCC rule." The FCC points out that basic consumer information concerning interference solutions now is available on the Internet through the FCC Compliance and Information Bureau's home page at http://www.fcc.gov/Bureaus/Compliance/WWW. The list also is available through the Commission's Fax on Demand service at 202-418-2830. Request document 6904.

The basic information includes the CIB Interference Handbook and the CIB Telephone Interference Bulletin, among others. The Telephone Interference Bulletin states: "Interference occurs when your telephone instrument fails to 'block out' a nearby radio communication. Potential interference problems begin when the telephone is built at the factory." The Interference Handbook includes a list of equipment manufacturers who provide specific assistance with interference problems. "Involving dealers and manufacturers in the resolution process should give them knowledge of the problems and provide both the opportunity and incentive to protect their products through customer service," the FCC said in a recent Public Notice.

The Commission emphasized, however, that its Compliance and Information Bureau "will continue to take appropriate enforcement action where it has been determined that the interference is caused by violations of the Communications Act or the Commission's rules or policies."--FCC

FCC SUSPENDS LOUISIANA HAM'S LICENSE, MULLS FINE

The FCC has suspended the Technician Plus license of Irvin J. Foret Jr, KB5UJD, of Metairie, Louisiana, after receiving numerous complaints about interference to Amateur Radio operations in the New Orleans area. The action came April 5, 1996 after Commission personnel monitored and documented Foret's transmissions in December 1995 and January 1996. The FCC said some of Foret's transmissions on January 29, 1996, "constituted willful or malicious interference to the transmissions of other Amateur Radio stations," in apparent violation of FCC rules.

The FCC also contended that, during an inspection of his station, Foret "was lacking in candor and misrepresented material facts" to Commission personnel by stating that he did not make the transmissions the Commission observed. The FCC also said some of Foret's transmissions were unidentified, included music or were obscene or indecent, the alleged indecent transmissions occurring at a time when there was a reasonable risk that children were in the audience.

The FCC suspended Foret's license for two years, and ordered a final determination based on the issues in the case and whether to impose a fine against Foret. If he files a timely request for a hearing or a written statement, the suspension of his operator license will be held in abeyance pending a Commission decision. Otherwise, the suspension order takes effect within 30 days of his receipt of the FCC's order.--FCC

FCC BUSTS WASHINGTON HAM BACK TO NOVICE CLASS

Arthur P. Baumgarden of Bingen, Washington, won't be KI7CW much longer. In a case that hinged in part on Baumgarden's claimed driving skill, the FCC concluded that he obtained his Advanced class license improperly and refused to review that decision. Baumgarden, 62, said he successfully upgraded to Advanced during a 1991 test session in Carson, California, a round trip of more than 2000 miles from his home. According to the FCC, however, he later told a Commission informant that he obtained his upgrade "through payment of money, without passing the required examinations." When the FCC questioned Baumgarden, he denied the allegations. The FCC asked Baumgarden to take the test again under another Volunteer Examination team, but he refused and appealed.

FCC records indicate that Baumgarden changed his story after the FCC first took issue with his version of events and especially with the travel times he supplied. In part, the Commission expressed disbelief that Baumgarden could have driven to Carson, California, and back in the times he claimed and called the alleged travel schedule "impossible to achieve within the speed limit." Baumgarden said he made the journey in his RV. The fact that Baumgarden later changed his story "damages rather than enhances his credibility, the FCC said." The Commission also noted that Baumgarden failed to corroborate his tale or to adequately explain why he provided two versions of events.

Although Baumgarden continues to deny he obtained his amateur license improperly, the FCC concluded on March 18, 1996, that "his denials are not credible" and refused to review the case on both procedural and substantive grounds. The Commission ordered that because Baumgarden declined to appear for retesting, his operator license would be reduced to Novice and his call sign changed to one appropriate for that license class.--FCC

HAM RADIO TWINS TO APPEAR ON TURNING POINT

Twin brothers Keith Heitzmann, KK5FE, and Jake Hellbach, KK5HY, will appear on the ABC Television news magazine Turning Point May 3. Jake and Keith, who live in Louisiana, were put up for adoption at birth. Adopted by different families, they lived only 15 miles apart, unknown to each other, until they met for the first time some 15 years ago at the home of Keith's adoptive parents. "As you can imagine, it was a very emotional meeting," Jake said. The brothers have been part of the Minnesota twin study that is looking into genetic versus environmental influences on separated twins.

Jake reports the two studied together, passed their Technician tests at the same session, and later upgraded to General and Advanced about the same time. Both work in the computer field and used to work for the same company,

which led to lots of confusion, Jake said.

Among other things, the Turning Point crew shot film of the pair attending the Lafayette (Louisiana) Hamfest. "You get some pretty good prices when a television camera is over your shoulder!" said Jake. Of all the film that was shot, Jake said he hopes the program uses at least some of him and his brother on the radio. "I was glad that when it was my turn, I contacted a fellow in Cuba, so at least there was some DX on that night," he said.

HAM RADIO HAS PART IN NATIONAL MUSICAL ARTS EVENT

Amateur Radio will play a role at a musical and historical event April 12-14 at the National Academy of Sciences in Washington, DC. Special event station W3A starts operation at 0000 April 13 and continues for the next 48 hours. Run by members of the Potomac Valley Amateur Radio Club, W3A plans to operate 47 kHz up from band edges.

The event is in conjunction with National Musical Arts end-of-the-season concert, "Radio and Music," set for April 14. The concert commemorates the 95th anniversary of Gugliemo Marconi's first transatlantic radio transmission and the 70th anniversary of NBC. The musical program includes the work "Radio Music," by John Cage, as well as compositions by Paul Schonfield and Peter Schickele, otherwise known as P.D.Q. Bach.

Leonard Schachter, N3RPQ, has loaned part of his vintage radio collection for the presentation of "Radio Music," to be performed by Schickele, Nobel laureate Joseph H. Taylor Jr and National Academy of Sciences President Bruce M. Alberts. Frank Turano, KA3GAL, will display Marconi memorabilia, including a magnetic detector, spark transmitter, receiver and telegraph key. Representatives of the ARRL will host an informational Amateur Radio exhibit during the event.

THIS WEEK IN AMATEUR RADIO DOWN BUT NOT OUT

This Week in Amateur Radio, a three-year-old weekly audio news magazine service, is once again off the satellite airwaves. The program, produced in Albany, New York, by Community Video Associates Inc., had been piggybacking for the past several weeks on the Tech Talk Network, uplinked via Skyvision on Telesat Canada Anik E2. When Tech Talk Network dissolved earlier this month, TWIAR was back to square one, explained Stephan Anderman, WA3RKB, the executive producer. "Needless to say, we are very discouraged," Anderman said, adding that he'd hoped the arrangement to use Anik E2 would give the program a C-band home for several years to come.

The demise of Tech Talk Network also put the Houston AMSAT Net off the air, AMSAT reports.

Eleventh-hour efforts to secure transponder space for TWIAR on Anik E2 failed, Anderman said. He and the others involved with the service are seeking a new satellite home. "Discussions with other satellite carriers for the donation or lease of satellite space continue in earnest," he said in a letter to affiliates. TWIAR relies on donations from Amateur Radio clubs and individuals to meet production and transmission expenses.

Last fall, the program went dark as a result of the shutdown of Telstar 302. TWIAR averages 75 minutes of news, carries ARRL and RAC bulletins, contest and convention information and propagation forecasts, as well as offerings from the Radio Amateur Information Network and Amateur Radio Newsline. The program was fed to over 100 nets and repeaters throughout North America every Saturday at 8 PM. TWIAR continues to be heard locally in the Albany area on the WA2OQE repeater (145.33 MHz) and on the "Gateway 160 Meter Net" (1860 kHz) from WA0RCR. The Houston AMSAT Net also will air on the Gateway net.

OL' SOL MAINTAINS A SPOTLESS REPUTATION

>From solar observer Tad Cook, KT7H, in Seattle, Washington, comes the now-familiar word that solar activity remains very low. The sunspot count was zero on March 30 and 31. Over the next few weeks, Cook says we can expect solar flux to remain near 70, with possible mild geomagnetic disturbances centered around April 17. On the air, 20 meters should be the best daytime band, but solar activity is expected to be too low to sustain much propagation on 15 meters or above. For worldwide communication at night, 40 meters is the top choice, but the low solar activity makes this the best time of the solar cycle for 160 meters, too.

The latest projections, based on current conditions and previous solar cycles, suggest that we will be at the sunspot number minimum for the next few months. The minimum is centered around April through June of this year, with sunspot numbers in February 1997 reaching fall 1995 levels. Previous forecasts have mentioned a 10.7-cm solar flux minimum centered around spring of 1997, but the latest projection moves that period up a bit. What it shows is a minimum based on an average flux of 72 for October 1996 through February 1997, with the flux also averaging 72 for June 1996.

Spring of 1998 should present a radically different picture. By then, the average flux will climb toward 100, and 10, 12 and 15 meters should be alive with activity again. By April 1999, the average solar flux is projected to be 158, rising to 192 a year later! The next cycle is projected to peak near the turn of the century--in August 2000.

ARRL WRC-99 CONFERENCE PREPARATORY COMMITTEE APPOINTED

ARRL President Rod Stafford, KB6ZV, has appointed the members of a committee to advise the Board of Directors on policies for the 1999 World Radiocommunication Conference (WRC-99). The Board established the committee at its 1996 Annual Meeting, and set its first task as defining the process by which membership input should be solicited and the opinions of the membership objectively determined.

The ARRL WRC-99 Committee is chaired by Dakota Division Director Tod Olson. K0TO. Also named to the committee were First Vice President Steve Mendelsohn, WA2DHF; Midwest Division Director Lew Gordon, K4VX; Southwestern Director Fried Heyn, WA6WZO; Northwestern Division Vice Director Greg Milnes, W7AGQ; ARRL members Ken Kopp, K0PP, of Anaconda, Montana, Tuck Miller, KC6ZEC, of San Diego, California, and Glen Whitehouse, K1GW, of Amherst, New Hampshire; and ARRL Executive Vice President David Sumner,

K1ZZ.

The committee is expected to complete its work by mid-December 1996.

AMATEUR RADIO GOES TO GRAD SCHOOL

Graduate student Bella Romain, N4ILQ, of Carrollton, Georgia, has a healthy curiosity. For a while now, she's been wondering what makes hams willingly go out of their way to help during emergencies. Combining avocation and academe, Bella has made that question the focus of her master's degree thesis in psychology at West Georgia College in Carrollton. "The fact that the FCC mentions public service as part of the reason for Amateur Radio's existence is obviously not the whole story," she said. "It is not easy to leave the comfort and security of a warm bed to drive out into a storm to help set up an emergency shelter."

A ham for more than 25 years, Bella speaks from some experience. Since she and her husband, Stewart, KF4WC, moved to Carrollton 13 years ago, they have become active in the public service sphere of Amateur Radio. They took a first-responder course, as well as numerous Red Cross disaster-training classes "so that if we are in the field providing emergency communications, we will be better prepared to handle any kind of emergency," she explained. She reports her Amateur Radio club, the West Georgia Amateur Radio Society, works closely with emergency-management agencies, the Red Cross, and the National Weather Service "as the need arises." Club members worked with the Red Cross to provide damage assessments and communication following Hurricane Opal. They also helped with emergency shelter operations.

Bella says it's not easy to endure the tedium of long hours at an emergency communication headquarters, nor to give up leisurely weekends and evenings to take courses to be better prepared for emergencies. She says she began to wonder "what hams experience and feel during the times they participate in providing emergency help, and what some of their thoughts and reasons were for doing this." To find out, as part of the information-gathering phase of her research project, Bella is asking hams to fill out a questionnaire. She'll then select a number of hams for in-depth follow-up interviews. Among other things, the questionnaire delves into respondents' emergency communication experiences and asks them to rate both their level of personal comfort and personal safety while responding during an emergency.

For more information, or to obtain a copy of the survey to complete, contact Bella Romain, N4ILQ, 285 Timber Ridge Trail, Carrollton, GA 30117-8884; tel 770-834-5674; fax 770-830-9481 or e-mail bella@mindspring.com.

LONG-DISTANCE RESCUE MISSION SUCCESSFUL

Collins enthusiast Bob Karon, AA6RK, of Encino, California, was checking out some repairs and modifications to his vintage gear around midnight March 18 when a routine evening of radio suddenly turned dramatic. While working a Florida station using his Collins setup, Karon heard the distress call from the 44-foot Canadian yacht Cambria, which had run aground and was sinking in the Caribbean Sea, some 150 miles southwest of Jamaica. "The signal was weak and fading," Karon reports. "I had to hold my breath sometimes to hear it."

The Cambria's skipper, Kenneth Cunningham, told Karon the vessel was almost on its side and the antenna nearly in the water. When Karon discerned the vessel's position, he telephoned the US Coast Guard. The Coast Guard could not hear the Cambria's weak signal, but was able to contact a merchant vessel 25 miles away from the distressed craft. Karon, a freelance musician, stayed on the air for the next three hours, the only connection between the merchant ship and the Cambria. "I reassured the panicky crew that help was on the way and relayed instructions from the Coast Guard and the rescue ship," he said. The merchant ship eventually was able to dispatch a lifeboat to the Cambria and rescued all four crew members. Captain Robert C. Gravino, chief of the US Coast Guard's Search and Rescue Branch, cited Karon for "professional and humanitarian actions assisting mariners in distress. A job well done."--Harvey Laidman, N6HL

13-YEAR-OLD HAM HANDLES EMERGENCY RESPONSE

Vince Bernotas III, N2WXE, an active member of Burlington County (New Jersey) ARES/RACES, turned out to be in the right place at the right time on March 17, and a dirt-bike racer is glad he was. Vince, 13, and his parents were among those helping to provide communication for the 1996 Sandy Lane Motorcycle Enduro, a 100-mile dirt bike endurance race through the South Jersey pine barrens. After an Enduro rider hit a tree a mile from Vince's checkpoint, N2WXE assisted in locating the paralyzed rider, believed to have a fractured back, then coordinated response of an ambulance and emergency vehicles, including a rescue helicopter. Complicating matters was a catastrophic radio failure in both the ambulance and state police cruiser. Amateur Radio saved the day when N2WXE forwarded urgent information about the patient's location and condition to net control Doug McCray, K2QWQ, who relayed the vital information to dispatchers. The rider is reported to be recovering. An active ARRL member since he got his ticket three years ago, Vince is net control for the K2AA/South Jersey Radio Association's Hams R Us Kids Net (see QST Nov 94, p 69).--Vince Bernotas II, N2WXF

"STEPS TOWARD MORE PERFECT COMMUNICATION" EXHIBIT TO OPEN

The story of Arthur Collins, W0CXX, and the Collins Radio Company is one of genius, vision, dedication and hard work--an inspiration for anyone with an interest in radio and electronics. Starting May 4, the public will be able to get a better understanding of the man, his company and accomplishments through an exhibit, "Steps Toward More Prefect Communication," at the Linn County History Center in Cedar Rapids, Iowa, where Collins was headquartered. The exhibit will point up the value of Collins Radio Company and Art Collins to the local area and the world between 1923 and 1969. The exhibit is designed to impart to visitors--especially youth--a sense of the values and tenacity Art Collins exemplified, and how--through hard work and application of knowledge--dreams can be realized.

Photographs, print materials, equipment displays, audio recordings of historic radio transmissions and other historical memorabilia will tell the Collins story, which is broken down into several exhibit topics. These include Teenage Wizard, 1925-1930; A Business from a Hobby, 1931-1933; Radios for Soldiers: World War II; Post-War Diversification (which chronicle

the company's Amateur Radio, broadcasting, avionics, military and computer efforts); To the Moon in a Volkswagen and The Legacy Lives On.

The exhibit draws on the resources of retired Collins Radio Company and Rockwell Collins employees, the Collins Museum at the Rockwell Collins facilities in Cedar Rapids, The Collins Collectors Association, The Cedar Valley Amateur Radio Club, the Collins Amateur Radio Club and the book, The First Fifty Years, by Ken C. Braband.

The exhibit draws its name from a statement by Art Collins, then age 16, in Radio Age magazine for May, 1926:

The real thrill in amateur work comes not from talking to stations in distant lands, nor from receiving multitudes of QSL cards from all the world, although these are things to stir your imagination, but from knowing that by careful and painstaking work and by diligent and systematic study, you have been able to accomplish some feat or establish some fact that is a new step toward more perfect communication.

The Linn County History Center is at 101 Eighth Ave SE, Cedar Rapids. The exhibit will remain open 10 AM to 4 PM Tuesdays through Saturdays until February 15, 1997.--Rod Blocksome, K0DAS

MILTON E. CHAFFEE, W1EFW, SK

Past New England Division Director Milton E. Chaffee, W1EFW, of Southington, Connecticut, died April 8, 1996. Milt was 83. He served as director from 1957 through 1964. Milt was a long-time ARRL member and official, and served in many League capacities, including assistant section manager and section traffic manager in Connecticut. He was an active CW and traffic enthusiast. He also served on the QCWA board of directors.

Connecticut Section Manager Betsey Doane, K1EIC, called Milt's passing "the end of an era." ARRL Executive Vice President David Sumner, K1ZZ, added: "Milt was a stalwart traffic handler who set and maintained the standards for the rest of us for more than 40 years."

A memorial service for Milt Chaffee was held April 14 in Southington, Connecticut.

IN BRIEF:

* A special event station to mark the first anniversary of the bombing of the Murrah Federal Building will be put on the air by the Oklahoma City Autopatch Association, in cooperation with the Salvation Army. The station, N5FM, will take to the air at 9:02 CDT on Friday, April 19, 1996, and stay on the air at least for the next 24 hours. The initial operating frequency will be 3900 kHz. Activity will move to other bands as conditions require or permit. N5FM will transmit a packet message from the bombing survivors association to the citizens of the world at 9:03 CDT.--Thomas M. Webb, WA9AFM (PIC, Oklahoma Section)

* Astronaut Shannon Lucid is now a member of the Mir crew for the next four months. The Russians have approved her use of the Mir radio on 2 meters, with the call sign R0MIR. Look for her on 145.55 MHz, FM simplex. Dave Larsen, N6JLH, is now the US QSL manager only for current R0MIR and R0MIR-1 contacts. QSLs must include date, time, and mode. N6JLH will not handle SWL reports. For contacts with the Mir packet radio personal message system, include the message number issued by the PMS on the QSL card. QSLs must be sent along with a business-sized sase. (A "green stamp" to cover postage also would be appreciated.) QSLs should be sent to: N6JLH, PO Box 1501, Pine Grove, CA 95665. QSLs for previous Mir contacts may be sent to: RV3DR, Chief of Cosmonaut Amateur Radio Department, NPO Energia, PO 141070, Box 73, Kaliningrad, 10 City, Moscow Area, Russia.--AMSAT SAREX bulletin; Space News

* The president of the Israel Amateur Radio Club, Joseph Obstfeld, 4X6KJ, visited ARRL Headquarters on April 1. During his stay, he and ARRL Executive Vice President Dave Sumner, K1ZZ, discussed the upcoming IARU Region 1 Conference, which will be hosted by the Israel Amateur Radio Club in Tel Aviv the week of September 30, 1996.

* A special event station, OEM1M, to commemorate International Marconi Day will be in operation April 20, 000-2400 UTC on SSB, CW and via Amateur Radio satellite (OSCAR 10 and 13 preferred). OEM1M will operate from the Radio Austria International broadcasting center in Vienna. Hams can register for a contact with OEM1M via e-mail at info@rai.pin.at or http://www.ping.at/rai/ on the World Wide Web. Then, during the three live broadcasts of RAI's Shortwave-Panorama program that day (at 0905, 1205 and 1605 UTC), hams on the list will be invited to call OEM1M immediately on a given ham radio frequency. The program will relay the transmissions to its worldwide shortwave audience. A special QSL is available for QSOs.--RAI

* RF Design magazine has moved its offices. The new phone number 303-793-0448, and the new address is 5660 Greenwood Plaza Blvd, Suite 350, Englewood, CO 80111. Editor Gary Breed, K9AY, has departed the magazine to become president of Noble Publishing in Atlanta, Georgia.

* Pupils at Leo A. Savoie Elementary School in Woonsocket, Rhode Island, this year marked 10 years participation in the School Club Roundup, sponsored each year by the Council for the Advancement of Amateur Radio in the New York City Schools, the ARRL and its Hudson Division Education Task Force. The idea behind the event is to foster contacts with and among school radio clubs. Principal Bob Jones, WB1P--with help from several members of the Blackstone Valley Amateur Radio Club--set up a station in the school's library for the event, February 12-16.--Rick Fairweather, K1KYI

* The 1996 AMSAT Annual Meeting and Space Symposium is November 8-10, at the Holiday Inn, City Center, Tucson, Arizona. The symposium has issued its first call to authors who wish to submit papers for this event. The scope of the papers should be on topics of interest to the amateur satellite service. The symposium organizers also are soliciting topics from the AMSAT community. Abstracts from authors should be submitted by June 15, 1996. Final versions of all papers should be received by August 15, 1996. Submissions and inquiries go to Dave Burnett, WD8KRV, 4809 E Pima, No. 223, Tucson, AZ 85712; e-mail wd8krv@amsat.org.--AMSAT News Service

Does anyone know how the RS Triband antenna should be oriented for
best reception? I understand that it is sort of directional.(?)
How should the plane of the vertical elements be arranged in reference
to the horizontal ground plane?
Finally, is it worth $9.00 to add 5 feet to the height of my antenna
mount?
Many thanks,
RC

Probe and Scan*Star apparently are the only commercial applications that do pipelined tuning with the 535. The reason that you don't see 80 CPS on the 535 is that it's only capable of about 60. I know the Opto literature says 80, but that number was based upon measurements that didn't take into account some important facts about how the synthesizer in the 2042/2035 works. If you go faster than about 60, you will miss signals.

Scan*Star for WIndows operates the 535 right at 60 CPS, and it uses pipelined tuning.

I don't know if you can do that with the PRO-37. I could do it with my 2004, but couldn't with another model (2026 or 2040 I think?). If this feature is available, PROGRAM - PRIORITY - 2 - 6 - PRIORITY, will set the channel to 26 instead of one.

I don't understand how anyone can copyright their posts. Don't worry, those "CD-ROM" garbage collectors don't need you to make money, and I am curious as to whether copyright laws would apply to public postings on newsgroups.. (It may just fit under the fair use exception).

Anyhow, that's about as silly as the few people who I have seen with copyright notices in their sigs that forbid Microsoft from transmitting the material over their network, again I doubt that would hold up in court!

I think that the "CD-ROM Garbage Collectors" do us a service anyway, that way if I need a particular mod I wouldn't have to post the request and tie up more newsgroup bandwidth with another senseless thread like this one. And I certainly won't go out and buy a $20 book so I can get that one mod that I need!

Apparently some people think I'm really nuts to give up my 200XLT and
that the offer is too good to be true, so, I've decided to extend the
offer one more week!!;-) I know, the 200XLT is probably the finest
receiver ever produced, I also know the 8K has a few problems and is
really hard to use, but hey, I want one. I'll bet you 8K users really
miss all of that intermod, don't you? Well, hurry because I may regain my
sanity and revoke the offer;-)

1262. Re: United Airlines Scannner Rules

Newsgroup: rec.radio.scanner

From: mulligan@ACM.ORG
Message-ID: <4ktnoo$mm1@HOPPER.ACM.ORG>
Source record: 236099

The FAA's ruling on Portable Electronic Devices (FAR 91.21), the official position of United Airlines and the statements of a number of other carriers can be found at:
ftp://oak.oakland.edu /pub/hamradio/docs/misc/ scan.airline

United's announcement bans all non-medical PEDs below 10,000'. The list of devices allowed at cruising altitude pointedly omits receivers of any kind. Other airlines, notably Delta, have a more liberal attitude.

A string of posters will no doubt: 1) Misinterpret the regulations; 2) Declare that all rules infringe on their rights; and/or 3) Gleefully recount how they outsmarted the dumb airline staff. I'd suggest you stow the scanner in your luggage and enjoy the flight.

> to the 760 but is NOT the same radio.

I had a 760 in the car when I lived in San Jose, and also when I lived in Utah. Both areas caused intermod problems for the 760XLT. It is quite sensitive, and even using a telescoping whip antenna while mobile there was too much intermod. (I didn't have the CTCSS module which would have helped as described above.)
There are no triple conversion mobiles except maybe the R100 that I know of - unless you want to use a 2006 or AR3000 mobile.

I had a BC 220XLT that I wasn't using, so I bought a universal hand-held cellular mount (pedistal) and hooked it to an external speaker - amplified works best - removed the battery and I run power full-time directly from the lighter socket - works great.

So find a good handheld (the 220XLT or 3000XLT are a good choices) and hook it up as a mobile.

Most all moder scanners sold in the US and Canada have civilian aircraft
coverage (118-136). Only the really inexpesive ones might leave off VHF
air (less than $130 new). You'll be fairly safe with any used scanner,
just ask about VHF air before buying - although $100 is on the low end.
$150 -$170 would probably be more realistic (no pun intended).

: activate my base set at a future time, using that same code? (Assuming
: that the unit didn't have COM-LOCKtm).

: (They don't call me paranoid for nothing! :-))

Whew! I suppose, in theory, it is possible. But in practice, it would be easier (and cheaper) to knock on your door and say "Here's $100. Mind if I use your phone?" Some of the phones set the code with a DIP switch (not too common, now) and you have to change the switch positions to change the code. Others update the code (typically one out of 65,536) each time you return the handset to the base. Many now change the code (again, one out of 65,536) after each call.

IF one knew which phone you had, and IF they knew the digital format used to pass the code, and IF they captured that code, then they MIGHT be able to use your phone line. Not likely. (Though this does remind me of something an acquaintance did a few years back. He built a sequencer that could, in a matter of 15 or 20 seconds, sequence through all 256 of the possible Genie garage door opener codes. Then he drove through random neighborhoods, watching the doors go up an down. Is such a thing possible with cordless? Possibly. However, to my knowledge, there is no agreed upon standard for the digital handshake. So, each manufacturer uses a different scheme...and could even use different schemes for each phone. Again, by the time you spent the time and money researching, building, testing...

If you are really that paranoid, we used to sell, and perhaps someone still sells, a gizmo that hooks to your phone line and produces transaction records for every call...# called, start time, end time. At the very least, you could detect unauthorized use very quickly and "nip it in the bud."

Oh, it would also be much easier to go down the block and break into the phone company's punch-out box, connect a phone to your line using alligator clips, and phone away. Or, connect at the point where the line comes into your home...or (if the wiring goes underground) dig up a small section and splice in...or, if you live in an apartment building,

get into the apartment next door and connect to your wiring through your neighbor's wall...or climb the pole and splice in...perhaps
I shouldn't be mentioning these possibilities to you; it sounds like you are already losing sleep. :`)

1266. Pro-62 vs. BC 230xlt

Newsgroup: rec.radio.scanner
Date: 1996-04-15 00:00:00 UTC
From: words1@interport.net
Message-ID: <317272eb.153183@news.interport.net>
Source record: 236103
Cross-posted to: rec.radio.scanner,alt.radio.scanner

I am new to scanning and am interested in buying a decent handheld scanner. At the moment, I'm trying to decide between the RS Pro-62 and the BC 230xlt. I am leaning toward the Pro-62 because I live in New York City and the triple-conversion might help with interference from powerful signals on nearby channels.

Any opinions would be appreciated. My main interest for the unit will be police, fire & air, not cellular.

You might be dealing with Split-band inversion instead of simple
inversion. You can buy the chips to do this, but you'd have to build
your own circuit. The chips are probably made by MX-COM.

Search the Usenet database or the Web and you'll probably find
information on this.

Several manufacturers (sp?) still offer there units to the government or agents there-of (read Contractors, Procurement Personel, Vendors, etc).

There are many reasons for this (in addition to the ability to LAWFULLY monitor Cell Freqs. i.e. with a warrant.)

Military Contractors do, every once in a while, try to save the Gov. money by using off-the-shelf parts (or units) in a system design. Why go through the process of designing and building a reciever to cover, say, 30 MHz to about 2 GHz, if that RX is availible for a couple K. This type of RX could be used as a monitor RX for a veriety of things. Could be the heart of an ELINT Sys., could just monitor many different transmitters operating across bands close to the cell freqs.

I use an R7000 at home, and an R7000, R7100 and two R9000's at work. But none of these nice radios can compare to the combination of an AN/WLR-1G, AN/WLR-11, a HP 8365B, and the odd AN/SLQ-32V3. With this combo I can monitor ANY frequency from 15 KHz to about 26 GHz. But I have NEVER intintionally (sp?) listened in on a Cell Call.

And sometimes you may need to be able to detect a given Freq even if you only use that freq as an I.F. and are up- or down-converting to it.

Well I guess there are no answers here only a bit of rambling,

Clear Skys and Low Noise.

Aaron,

I'm sure everyone will have a different answer for you but my base station antenna solution here in a two floor home was to simply buy a Radio Shack discone for about $18 and a suitable hank of RG8X (less than $20 with connectors) and have the discone basically sitting on the floor in a small crawlway space (at second floor level). It works much better than the built-in whip and allows me to put my radio on my bookcase with a low overhang (which prevents efficient whip extension). I seem to do real well on 2M ham frequencies (144-148MHz) and quite well on 400-500MHz and acceptable on 800+ MHz. If you have someplace inside your apartment to place one of these discones (and assuming the apartment is not a dead zone for radio waves) you could give it a try. Alternatively, you could place one on a small mast and place it in the corner of your balcony when you wish to scan.

BTW, I have a Cushcraft 2M Ham 1/2 antenna on my roof which is fairly specific to 2M transmit/recieve but seems to give me excellent results on many bands when hooked up to my scanner. I don't think the antenna itself is that great throughout the bands I listen to but I think it's the height above ground which gives the excellent results.

> I would prefer to build one myself because I find it fun, but I am not

The only antenna I really have ever had experience with building is a 1/4 wave 2M antenna (made from a chassis-mount or wall-mount SO239 connector (less than $2) and some coat hangers cut to appropriate length - four for radials and one for the vertical element). You could certainly build one of these but it will be basically built for one frequency (although you could build it as a 1/4 wave for ~150MHz and probably get 5/8 wave for ~440MHz, etc.), however you may get good results throughout the bands you're looking for. I still feel the biggest gain you can make with an antenna system (both home-grown and store bought) is the height you can get it above ground (and surrounding objects).

Good luck and take care,

Dave Bernazzani

Ah yes! GOLF makes much more sense. Or fishing ... Or stamp collecting ...
Or ... Well, you get the idea (maybe). People create "hobbies" because they
find something in them that's interesting. In Ham Radio, there are several
"subsets" (if you will), or specialties that allow for a wide range of varied
interests. Yes, some would just buy the most expensive (Japanese made BTW),
radios, put up an antenna tower and antenna, and "chew the rag" with someone
equally boring half-way around the world. If that's what they find to be fun,
then more power to them. Others find that *experimentation* (and Ham Radio is
one of the last areas of technology where that can still be found), in the
radio frequencies is fun ... and educational ... and perhaps career oriented.

There's lots more that Hams do ... for fun ... for the sake of having a hobby,
and for, yes, the benefit of their fellow human beings. I refer to those who
are engaged in the "SKYWARN" activities in states where severe weather can
threaten life and property ... Or those who provide emergency communication
when even cellaphone sites are rendered inoperative (such as happened in the
last big quake in southern California). There are some who attend and provide
communication - free communication I might add - to charity "Walk-a-Thons" and
other large-scale public events where *paid-for* communicators are out of the
question.

I've tried to live my life looking at the people around me as being of some
interest ... regardless of their chosen life style or hobby or vocation.
It never ceases to amaze me that people can sit back and "knock" something
for no other reason than just to say "Look at me! Ain't I smart by putting
these people down!?" Unless of course ... that's your hobby.

What ever turns you on ...

Robert - N5UPF (And Proud of It)

While there are differences between the BC9000XLT and the BC8500XLT, I
think the receiver section is essentially the same.. Mine suffers from
severe lack of sensitivity and connecting an outside scanner antenna
often makes the situation worse..
for whatever strange reason..

I havn't used Goldwave, so I can't tell you if it will do it, but I can say that "invert" is not what you want. Invert simply flips the positive going wave-forms into negative going wave forms, like flipping a sinewave over. This won't really change the sound of normal speach. What you need to do is frequency inversion. You need to take the high frequency sounds, and make them low frequency sounds, and the lows into highs. Here's a suggestion: Record some normal speach. Play with Goldwave and attempt to modify the sound so it sounds like the frequency inverted stuff you hear on the scanner. Then you've got it, since most frequency inverters use the same technique to decode as they do to encode.

This is bad news. I bought my 2004 in 1987, right around the time they closed out that model. I've had it repaired twice since then, but not in the last three years.

My first suggestion: Call a different Radio Shack! I just called one near me, the answer: "We repair anything as long as we can get the parts for it."

Being in Hawaii, you may have a limited number of Shacks to choose from, maybe you could ship it.

But 250 channels without numerics are useful for band scanning. It
would be nice if the first 250 channels were not completely full
that channels 250-500 could have labels (up to a maximum of 250
labels).

> So So audio

Try turning the Hi-Cut on. This makes a world of difference.

> mod increase s/w performance (utilities, etc.)?
It does improve the s/w performance a lot- so much that you'll be able to hear plenty of stations that are normally masked by neighbouring strongs signals. Depends on your antenna and the strengths of respective signals of course, but I would easily give it an 8 out of 10 (with 10 = best).

>2. Is this mod something you came up with or did you buy it
> commercially?
I did not buy it.
Ken sells do-it-yourself instruction sheets for $10,- that involves an add-on switch (he drills a hole to the right of the volume pot, I replaced the right hand rubber grip and underlying metal plate with a home made plate that holds the switch -thus I can restore the unit).
There are several more elaborate versions of this mod avaliable that use the Local key for switching it in and out, no need for drilling. These you cannot install yourself and cost about $100 or DM 150.

>3. With the mod installed, is it still worth purchasing a dedicated
> comm's receiver, or does the mod rival a receiver in the $500 price
> range?
Hmm. I have little refence so I can't really tell. Lets be real: the AR8000 just is not a dedicated communications receiver, it was never supposed to be. With the mod it *is* a reasonable s/w receiver that you can carry in your pocket.

But look at it this way: if you already have the 8000 you can easily try it out for yourself without having to fork $500!

>Thanks.
You're welcome.

Bart.

It'd make a great scanner, whether you're a newcomer or not. And the Freq Fan Club (800-RACE-FAN) sells them with an audio output mod and Nite Scan mod. They also have high output nicad packs and a semi-rapid charger.

1287. AR2700 PLL ERR Question

Newsgroup: rec.radio.scanner
Date: 1996-04-16 00:00:00 UTC
From: Ted O'Neill <toneill@niagara.com>
Message-ID: <317443AA.FF6@niagara.com>
Source record: 236007

I was checking out the special functions of my AR2700 scanner as outlined in the manual (Squelch Detect, PLL lock detect time and IF selecion) when my rechargeable batteries died. When I put a new set in I kept getting a PLL ERR message for frequencies below about 50 MHz and no audio. The higher frequencies seemed to work ok but I didn't check out all of the memory banks to see what worked and what didn't. After considerable sweat I decided to try the microprocessor reset. I lost the memories like the manual said but the problem still remained.

I left the scanner on (for about 10 minutes) while I read some technical stuff on the AR2700 that I got off the net. When I came back and tried it again. Everything worked ok.

I would appreciate any comments on this from you experts out there. I have had this radio for about a month and am just getting used to it. Are there any special precautions that I should know about concerning special functions and other stuff.

Thanks for the help.

I think the Pro-25 scans slower than the Pro 51. I just bought a Pro-51 a couple weeks ago (they're everywhere in Toledo,OH) and it has the turbo scan feature where it's supposed to scan the frequency band at 25 steps per second and the channels you define at 50 per second. That is the only difference it could be if they both cover the same bandwidth. Maybe the 51 scans in smaller increments??

Well, if you didn't care about violating the FCC rules and regulations,
you could hook it up to some Ham equipment and broadcast it... or better
yet, shortwave, that way people in Bangkok can listen to your calls.......

>banned from operation on the flight (unless the pilot says OK).

>bottom line is, the pilot has the last say

Beg to differ. I believe that the FAR says that the "Operator" has
authority to make the call. That is NOT the pilot on a particular flight, but
the Head Pilot for the line or Chief of Flight Operations or some sim,ilar.
Permission from the pilot, while reassuring does not make it "by the book".
Someone who has read the regs more recently than I may want to correct me, but
I think the distinction I make between the pilot and the "operator" is valid.

>

JFYI, Here's how Max-com does their speech inversion (scrambling);
For transmit a 3.333 KHz carrier is mixed with the incoming audio,
sidebands are produced...the upper sideband and the carrier are filtered
out. You only get to hear the lower sideband of the audio which essentially
sounds like inverted speech to a receiver that is not equipped with the
the same scheme of decoding it. To recover the audio during receive, a
3.333 KHz carrier is mixed back in and of the resulting mixer products,
the audio only is passed.
Keep in mind that the sidebands are at AF....not to be confused with
RF SSB (Single SideBand) as a mode. The inversion can be performed using
virtually any mode (AM,FM,SSB).

I have a question for you Bill. How did you make the determination that
Hugh is "persona non grata" in this forum [rec.radio.scanner]? Is this
your opinion? If so, please keep it to yourself. You don't speak for the
rest of us.

Also, for all you fans of the CE-232 mod or variant of it for the Pro-2006.
If you have gotten to this point, I'm working on a new firmware to expand
the features and replace the current firmware. I might even make it compatible
with the CI-V language used by everyone else. Drop me an email if you are
interested. I'm planning on giving it away when I'm done along with a list
of changes to the CE-232 to make it much more powerful or at least to conform
to the board I developed. Also, is anyone interested in the source code for
the firmware in either Assembly or C?

Later,
scott

Source record: 236026

Hi everyone, Please excuse me if this has been discussed here, but I wonder why there is this push to move all the police and fire to 800 MHz. We keep reading in this newsgroup about how the systems are not that reliable, keep having problems once you leave the street, etc.

Just wondering if someone has seen something printed somewhere that indicates what's going to happen to the frequencies once they're abandoned.

Well, in an overly simplistic list there is the following:

Aeronautical navigation
Radio location
Radio astronomy
Space - Research
Various satellite transmission uses
Meteorological aids and satellites
Telemetry
Fixed point-to-point, microwave

I don't think there's much in the way of police/fire/EMS/ham/etc if that's what your mainly interested in. Someone with experience listening in on this frequency range could give you a better idea as to how much interesting stuff is there. When I looked for a scanner I wasn't very interested in much above the 23cm ham amateur band (1270-1300MHz) so I personally didn't think it was worth it (got the BC3000XLT which covers up to 1.3GHz).

Take care,

From: pkhartley@aol.com
Message-ID: <4kv68h$jrt@newsbf02.news.aol.com>
Source record: 236049

For Sale:

Used Radio Shack PRO-50 Scanner:

Freq Coverage:
30-54MHz
137-175MHz
380-512MHz

Modifications:
-Scan and search speed doubled

Accessories Included:
-NiCads (6 Radio Shack Brand AA's)
-AC adapter/charger (Radio Shack Brand)
-Service Manual with Schematics & Tech. Info
(Ordered from Radio Shack)

Reason for Selling:
Have too many scanners!
Bought this because it was compact, but I purchased an ICOM R1, so don't need this anymore!

Price: $100

If new, all of the above would cost over $150 (with scanner at sale price).

For Sale:

Used Radio Shack PRO-34 Scanner:

Freq. Coverage:
30-54MHz
108-174MHz
380-512MHz
806-960MHz

Modifications:
-Cellular Coverage Restored (See Freq. Coverage Above)
-Search & Scan Speeds Doubled

Accessories Included:
-Service Manual with Schematics and Tech. Info.
(Ordered from Radio Shack)
-Original "Rubber Duck" Antenna
-User's Manual

Reason for Selling:
Too many scanners!
This was my first scanner. I purchased a full coverage AOR1000XLT and no longer need this one. (Although I will miss it, since it is about 1000 times easier to use than the AOR!)

Price: $150

It is remarkable that a jackass can come on to rec.radio.scanner, start crying about his Fido problems and presto, the little net monkeys crawl out of the woodwork and support such nonsense. What a pile of crap.

Duff, take your fido problems somewhere else, rec.radio.scanner isn't the place.

PJB, it seems to be time to have your prescription refilled. The mental case kiddies music teacher is having a melt down, again. You got your liar ass kicked over the Moss deal and now you are sniffing the backside again.

Quite frankly, I don't care if Bill Cheek is the biggest horses ass in the world. The one fact remains, Cheek has yet to start any of this garbage. Moss, Duff and PJB just seem to have to start this BS and then cry because Cheek is so forward in his replies. Seems he has the right to treat the little kiddies anyway he wants. After all they asked to dance.
PJB is clueless about scanners and along with Duff they have contributed ZERO to rec.radio.scanner. Go figure.

>xhcj28b@prodigy.com

You are correct, it isn't the right place to post this, but since there really isn't a "generalized" two-way radio newsgroup I doubt many people will get on your case about it...

The questions you are asking CAN NOT be answered with the information you have given. YOU need to send another message and include the ENTIRE motorola Model Number for the radio.. See GP300's come in all bands, they make a 2 watt and 5 watt version, and the range of (ANY) radio depends on you, will it go through a repeater, simplex, will it be connected to an external antenna, will you use a convertacom with it that has an amplifier, will you be using it from a 10 story building???? This all depends on you... Generally ALL handheld radios have an effective range of 2 miles or less, depending on output power...

Once again in order for I, or anyone else on here to answer your question you need to include the entire Motorola Model Number, it will be something looking like this (purely example only) D45KGA5JB5AK.... Post or EMAIL me this info and I can tell you in about 5 minutes what EXACTLY the radio is...

One thing, you can look at, is the antenna real short (less than 5 inches long) or long (6 inches) and very thin with a round bobbed off tip? That can tell me right there if its a UHF or VHF model.

1324. Re: United Airlines Scannner Rules

Newsgroup: rec.radio.scanner
Date: 1996-04-16 00:00:00 UTC
From: pkhartley@aol.com
Message-ID: <4kvr6h$qcd@newsbf02.news.aol.com>
Source record: 236109

Scanners are usually allowed, except for take off and landing (all airlines I've been on anyway). Stewardesses usually mistake scanners for cell phones and may ask questions, but most go away once you tell them it is just a radio receiver similar to an AM/FM radio.

Cellular phones are completely banned from operation on every airline I've been on. In general, any transmitting devices is not allowed to be operated on a plane, but I have heard an amateur radio operator state that he asked the pilot for permission to operate his portable tranceiver (I forgot what band) and he was given permission to do so.

The reasoning behind this is simple, but very important. RF emissions from your device may interfere with the pilots communication and navigation equipment. So equipment that emits only a small amount of RF power (CD players, scanners, laptops, etc.), are unlikely to interfere, but are still not allowed during take off and landing, just to be safe. RF transmitters emit a great deal of RF power though (600mW - 5W or more) and the chances of interference are quite high, so they are are completely banned from operation on the flight (unless the pilot says OK).

The above info is based on my experience, the experience I have heard from others, and the written policies of airlines I have flown on. However, the bottom line is, the pilot has the last say (assuming you can get to him to ask him). If he does't want my CD player running at all for fear of causing a problem with his equipment, then I'd listen to him!

Hope this helps,

PKH

1325. PRO-2004 & Radio Shack

Newsgroup: rec.radio.scanner
Date: 1996-04-16 00:00:00 UTC

PRO-2004

Took scanner to Radio Shack for repair; was informed they no longer support or repair. I find this hard to believe, but want to check with other scanning enthusiasts to see whether anyone has experienced similar responses.

The volume of the scanner (both speaker and external speaker) has gotten quite low (almost inaudible). Need it repaired if possible. If Radio Shack does NOT repair PRO-2004 any longer, any good references for other repair facility?

Much appreciate it!

Thanks.

> and then kicks users off the air for doing the exact same thing..?

Where the hell are you coming from, Ignats? I am NOT a moderator here. And where I am the moderator, I do not flame or bother people whatsoever, even to the extent of avoiding posting period. Here, your brother-in-law (Hugh Tuff-Duff) attacked me and ziggied off topic slicker than greased owl snot on ice.......

> Mr. Cheek, in all honestly, I am somewhat new here, but your attitude
> is extreamly abusive and self-centered.

Thank you for your carefully considered opinion.

> (And you should be removed as a moderator immedately).

Then remove me........

>Is calling someone "cheese-fer-brains!" complying with the rules (flaming)..?

I have a warped sense of humor. If I intended to flame Tuff-Duff, I would have called him something like "shitfer brains".....or "Ignats". You beginning to catch on now?

>I've seen (we all have) offensive displays of superiority and overbearing
> self-importance in other networks before, mainly in the religion conferences.

With the scanner off, press and hold the 'MANUAL', '2', and '9' key.
Then turn the scanner on while still holding the buttons. This will
reset your scanner to all 000.000 for every channel.

Easy to say when the ONE MOD YOU NEED is nothing more than "clip a diode" or "move a resistor". I would tell you the mod before selling you a book under that scenario. Anything more complicated than that would give you a sphincter spasm, anyway. Keep your needs simple and your philosophy will serve you well.....

It depends on your use. I had an 8000 and thought it was a waste of
money. Compared to my Pro2006 it was near deaf. I have near a dozen
radios of various types, and the *best* of them would probably
be the 2006, although I'm fond of several of the handhelds as well.

Powering it from the car does charge the batteries, so there's no need
to bring it into the house to charge them. You probably don't want to
keep them on charge all the time you're in the car, though --
continuous charging can eventually damage the batteries.

Use the radio with power disconnected, and when they die, connect to
the external power, and leave it plugged in overnight (assuming your
power connection stays hot with the ingition off).

> Can anyone clarify this?

> Thanks!

All airlines prohibit using radio receivers during all parts of the flight. That's because the receiver contains a small transmitter -- called a "local oscillator," that has a very small potential to interfere with the navigation equipment in the plane. Of course, transmitters (ham radios, cell phones) are also prohibited.

Most of the flights I've been on recently (TWA, US Air) permitted computers, games, etc. after takeoff.

Mr. Cheek, if you are supposed to be so smart, and also supposed
to be a publisher of a book that you want us public to buy,
then why do you have to result to name calling, no matter
if Mr. Duff is right or not, he wasn't the *FIRST* one to resort
to name calling here in this newsgroup on this thread was he??

Yes, I see the conflict of interest in his moderating, but since
I have little use for FIDO, and as BBS's become even less
popular, the communist moderation of the fido echos
will be no-longer..

My advice, take this to e-mail, I personally don't want to
waste my time reading messages where one calls another a name
and so on, if Mr. Cheek is what you say, then we'll have to judge for
ourselves, and if that's the case, then not buy his books... Simple
commercialism at work!

On the subject of silly uses for scanners, visitors to the Golden Horsehoe area of southern Ontario can use their scanners as McDonalds detectors. Just plug in 30.58 and drive around with it in the same bank as your police frequencies(or whatever you usually listen to)and you can usually lock onto their unmistakable audio before you can actually see the golden arches. A few times I've been driving on the 401 or around Toronto, etc and my usual target's comms were interrupted by "I'll have a Big Mac..."etc. I'd forgotten I had the frequency in the bank but I still knew when a McDonald's was coming up. I have yet to find a Mcd's around here that wasn't using 30.58. So if anyone asks you what good those scanner things are, well, NOW you can straighten them out!

I could never understand why people spent all this money just to talk
around the world to someone about their antennas. Though, I must say
that the shorter range VHF bands seemed to be populated more by people
who genuinely enjoyed conversation. But, this may vary from region to
region.

Not really.. as I posted earlier, there doesnt seem to be a two-way radio newsgroup!

> help with a Motorola Radius GP300...
> What is the freq/s that this can transmit on ?

Depends on if its VHF or UHF version; is the antenna tall or short; thick or thin? Check the label on the back of the radio, it may tell you the freq range (look around for the FCC ID # and info)

> What is its Wattage ?

probably between 1w and 5w;

> What is its range ?

Again, depends on the band and also power; If its operating simplex (direct radio to radio) it could be only a mile or so, basically line of sight. If its set up on a "repeater", you could have city wide coverage.

Does anyone have any experience with the Dressler ARA-2000 Active VHF/UHF Antenna?

I'm looking for good and bad experiences.

o What is the physical size of this antenna?
o If it's small enough, will it work in a closet or attic?

Most importantly, is it worth it's listed price of 279.95 (incl shipping).

I've seen it advertised in US Scanner News (this month on page 19).

Thanks in advance for your info. Please email vice posting, I'll compile and post a synopses<sp?> when I get responses.

Cheers!!!

>I received several messages this past week.

Greetings,

With respect to the AR8000 list at ml.rpmdp.com I will be putting this
back up come the end of the month once I get back on the net full
time. Durning my move from MA to DE I had some hardware problems and
have been slow to get things rolling again.

If someone else has started, restarted the list please let me know so
I don't duplicate the new list. No need for that. If the other list
is just a temp thing waiting for me to get things rolling then also
let me know.

Again, the AR8000@ml.rpmdp.com should be back at the end of April.

Cheers!!!

I never pay attention to the company techs, especially when they
tell me that something that I observe constantly is impossible.

There is a Uniden SMR in Rochester, NY that transmits a
subaudible tone of 162.2 Hz. Unfortunately, that tone appears on every
single transmission made through the system by every fleet, so it's not
of much use except to eliminate interference when using a non-trunked
scanner to listen in. I honestly don't know why the tone is there...

In most jurisdictions, this will get you an opinion, or a flat refusal.
The job description of a police officer does not include being a lawyer;
IOW, they are usually specifically prohibited from defining or interpreting
the law, except as it applies to the job at hand.
The best place to find this particular information is either to locate and
pay a communications lawyer, or to ask here, and sift out the "well, I never
had a problem with carrying one" from the "In such-and-such state (for example,
Airzona), it's legal, as long as you are not commiting a crime", or, "In
such-and-so state, it's leagl as long as you are a ham or emergency personnell
of some sort".
Even so, local laws may make it illegal, while the state says it's OK.
Good luck.

> altered.=====
452.630 is not a valid frequency. In that band, the closest valid frequencies
are 452.625 and 452.650. You may have gotten someone who does not understand
the proper spacing to give you an incorrect frequency.
If someone *is* transmitting on 452.630 MHz, he may well be stepping on
someone using the proper spacing.
There *are* scanners that will tune to any frequency you want, regardless of
the bandplan. All it takes is money! Obviously, the PRO-43 is not one of
those.
Hope this helps.

Cellular phones are banned under FCC rules, not FAA regulations. They
don't want cellphones at 30,000 feet accessing every cellular system within
a several hundred mile radius.

> banned from operation on the flight (unless the pilot says OK).

Actually, the FARs say "operator", not "pilot", which makes a difference
on a commercial flight, where the operator is the airline and not the pilot.

Well, let me tell you about my antennas ....

I think the point here is that Mr. Kaye somehow clearly missed the whole point. Some people are cursed with the inability to make the "larger" connection. But that's a problem of vision and understanding and the ability to see or not to see the bigger picture on his part, and has nothing to do with Amateur Radio. If I just want a little conversation, I'll go down to the local coffee house (or bar) thank-you-very-much.

The 890 is known for being a poor performer. If you live in or near a
city like Atlanta, the intermod problems will drive you crazy. The
216-400 range is for military aircraft which isn't for the casual
scanner. I would go with the 220xlt or spend the extra money and get the
9000xlt if you want a base scanner.

The 9000 seems more sensitive than my 2005 and slightly less sensitve
that my AR3000A. Seeing how the AR3000 has slight intermod problems, the
9000 is just right.

For sale:

AOR AR1500...

cont. coverage (built in, never modified) from 500KHz to 1300 MHz. Comes w/ leather case, cig cord, rubber ducky, 5 meter long wire for SW, nicad batt pack, AAA batt holder, original manual, and original box. The scanner is capable of WFM, NFM, AM, and SSB. It has a BFO for side band. It has has an antenuator that you can turn on and off. There are no dents, dings, or even scratches on it.

I would like to sell it for $500. Price is OBO, of course. I need $$$ for school. Please call me at the number below if you like to discuss this. You can call at anytime of the day.

If the speed trap detects only the slower vehicle and that one is exceeding
the limit, then they've got you by the gonads because if you're overtaking
it, you _must_ be going faster, otherwise it would be overtaking you,
wouldn't it? If you are thinking of Gatso cameras, this is one of the
reasons why they take two photographs. Exactly the same applies if it's
Mr Plod using the Mk 1 eyeball (no, I don't mean he spits out two 6x4s <g>).

Source record: 235818

Hi Greg,

You'll probably get quite a few replies since the 150 is a decent scanner for a low price. The cellular images are in the 800-900 mhz band. Hit the BAND key till you see that band then let the freqs roll by till you get in the range from about 880 to 940. I know the 900-920 area is prime territory on my BC 150 for cell phone traffic. You'll usually hear both sides of the conversations although one side may be lower in volume. And you'll usually hear about 30 seconds to a couple of minutes of a conversation, then a "buzzeeep" noise just before the system switches to another freq. There's no way to follow that conversation. You can scan the band again and you might find it but usually not if you're in a large metro area. In a rural area or small town with less overall cell traffic conversations may tend to stay on the same freq longer. Same when the system is lightly used in a metro area.

Some other tips for the 150 --

Tip No. 1 -- If you are scanning in a band and want to "fast forward" to a particular freq just remove the antenna. The rig will be less likely to stop on freqs you're not interested in. That's my biggest gripe with the 150, you can't set an upper and lower limit to the scan. I think if you set it to HOLD before you leave a particular band the rig will return to that freq next time you choose that band. If it's on scan, when you return I think it'll start at the bottom or top and work its way up or down. This can get to be annoying if you do much prospecting in the wide bands.

Tip No. 2 -- There's no battery voltage indicator on the BC-150. But you can get a relative reading by holding the WX and LO keys both down when you turn the rig on. You'll get a number in the LCD display which provides a relative reading of battery state. On my rig when the nicad is fully charged it shows 1.62. When it gets down to about 1.39 the low batt indicator is flashing and beeping and it soon shuts down. So that's very handy. Tip No. 2-A. Once you're displaying this battery state you have to hit the SCAN key to return to the normal LCD display. Even after you turn the rig off and back on you'll still be in batt display.

Dick Williams rjw@sky.net
Kansas City MO

If anyone has "cracked" the other undocumented keyins with the 150, I'd like to see the list. I know that once you're displaying the battery state you'll get a different reading with each numerical key you press but don't know what those are. And I've heard some combos can erase all memory but I haven't found that combo yet.

I was just about to post a message like yours. My friend took his PRO 2004 to Radio Shack two weeks ago and left it there to be repaired. After two weeks, they called him to come pick it up and told him, "We do not have parts for it anymore." It sure doesn't sound right...that was a popular scanner! Any information would be appreciated.

Anyone who knows the mod for speeding up the scanrate of a PRO2006. I finally got my hands on a used PRO2006 (well, a Handic 0080 wich is identic to a 2006) and found out tha a friend of mine has a PRO2006 scanning 25 channels per second, but when he bought it, it was already modified and he don't really know how it was done. Anyone knowing of a simple modification?

Electronic greetings, Jann

1394. St Paul and Minneapolis police dispatch hashings <<<<<< !!!!!!

Newsgroup: rec.radio.scanner
Date: 1996-04-17 00:00:00 UTC
From: mpe@procyon.uucp
Message-ID: <4l34ck$68e@magpie.cdev.com>
Source record: 235829

Hi Everyone,

In the seven county metro area surrounding the St Paul and Minneapolis
cities, the county police dispatch using a number-letter-number-number (NLNN)
scheme. Examples include:
2 Bravo twenty three
3 King nineteen
1 Zebra two (or zero two)
4 David fourteen

I was wondering if anyone could explain the hashing function used.

I've noticed some correlation between:
first number and time-of-day, so perhaps shift number(???)
second letter and city region, so perhaps city or zone hashing(???)
third and last number and ???? (I don't have a clue)

Any suggestions, observations, or friendly comments please post or
forward to
mpe@procyon.cdev.com

Thanks!

The problem is the ON/OFF/Volume control. The metal contacts can't take the power when being turned on and eventually burn the contacts. There is also a variable trimmer pot that eventually goes bad and you'll notice the scan speed will slow-down on some bands, then speedup again when scanning others. Also this scanner can have a speedup mode done to it by replacing the original crystal and have it scan from 40-50 channels per second to 70-80 per second once the mode is done. If you have the TS1 (35 channel model) you can simply replace a chip and the radio will have 75 channels instead of the original 35. I have four of the TS2's, two of the TS1/s for sale and have the original boxes, manuals, and hardware. Let me know if your interested. Thanks. ->Dan

Funny you should mention that. I have a R.S. 'Phone Accountant' for
keeping time records of client calls. One day it started chattering when
no audio or modem device was active. I stepped out to the hall and observed
a telco field tech holstering his handset and closing the equipment closet.
When asked if he had just called ###-####, the shock was noticeable. I
wouldn't be surprised if that line now has a hang-tag "Pen Register in use
- don't touch this line!" <g>.

Hi,Bob...
Chances are, if connecting to an outside antenna makes your sensitivity
seem worse, it's overloading the front end, causing 'desense'. It's hard
to say this with any certainty, because I don't know your exact situation,
but that's a fair guess.
Are you in an urban area? Often, scanners there can be overloaded with
a good outside antenna.

Source record: 235909

Trunked systems use a subaudible tone similar to PL for control purposes. It is the first line of defense against other comunications accessing the system. Different systems use different tones. The Motorola trunked system in Elgin IL uses such a tone, and the CARMA BBS has had some postings on it. I will try and find the actual tone, as I don't have it handy.

In article <4l0f1f$es0@news.cioe.com>, drunyon@abcs.com wrote:

>> I highly doubt you will find CTCSS or DCS or much of anything
>> similar...it is a trunked system after all. I am not aware of a

Yes. The Opto DC440, and the CSI CD1 are both in the 200-250 dollar range
and connect to your scanner. They read out the PL, DPL, and DTMF in real
time.

The CD1 has no controls, it just reads out the tones as they are sent.
The DC440 has memory, and a couple controls that allow you to make some
option choices. I have 3 CD-1's and have had no problems with them. I
don't have a DC440, but have heard good things about them.

There are other choices, but these are probably the best for most applications.

Besides, how many people do you know that ACCIDENTALLY inhale. If it was my stuff and they didn't inhale, I'd be PO'd <;)

I believe his question was appropriate, after all this is a scanner
posting group. The answer to the question is: it depends on what
state you are in.

Maryland it is OK.

New York and New Jersey does not allow it unless you are
a fireman, police officer or hold a current amateur license.

We just went over this about two months ago I am surprised
someone hasn't posted the 50 state list!

And as an update to the update to the original post... The 116.3 tone is
actually a "Connect Tone" vs a PL tone. The function is to hold the
system if the voice level degrades momentarily, and validate the signal as
being from a real user of the system. The functions are similar to PL.

last changed April 17, 1996 |

IMPROVE THE SQUELCH IN YOUR MONITOR RECEIVER

Copyright 1988 - 1996 by Bob Parnass, AJ9S |

[NOTE: The first version of this article appeared in the |
RCMA Newsletter, December 1988. It may not be reproduced |
in whole or in part on CDROMS, in bulletin boards,
networks, or publications which charge for service without
permission of the author.]

The squelch control in some FM monitor receivers is difficult to use because of too much hysteresis. The American Heritage Dictionary of the English Language defines hysteresis as the:

o "Failure of a property changed by an external agent to return to its original value when the cause of the change is removed."

It's like having play in a car's steering wheel, or backlash in a gear set. Too much hysteresis in a squelch circuit forces one to keep the squelch at a tighter setting, missing weaker signals when scanning or searching. The squelch hysteresis problem was first addressed in a 1984 article about the Radio Shack PRO-24 crystal controlled scanner.

Why do engineers design these circuits with any hysteresis? Basically, hysteresis prevents weak signals from "popping" the squelch open and closed rapidly, which would be very annoying to the listener. A squelch circuit with hysteresis requires a stronger signal to open the squelch than it does to keep it open.

Models cursed with too much hysteresis include the Uniden/Bearcat 800XLT and 760XLT, Radio Shack PRO-2003, PRO-2004, and others. Don't despair, the fix is simple for most radios. I've successfully reduced the squelch hysteresis by replacing a single resistor.

Hysteresis is usually implemented by providing feedback from the squelch gate input to output, through a resistor. The higher the resistor value, the less feedback there is, and less hysteresis. My modification involves replacing the

"stock" resistor with a higher value resistor, as identified in the table below.

This technique does not apply to some of the newer Uniden | models, because the squelch hysteresis is partially | determined by firmware inside the processor IC. |

This article cannot provide step-by-step instructions for each radio. I always encourage radio hobbyists to purchase the service manuals for their equipment. The most useful sections of the manual are the schematics and printed circuit diagrams. Good manuals will also describe the theory of operation and alignment procedures, and contain a complete parts list.

If your radio has too much hysteresis, and is not listed in the table, study the service manual. Motorola MC3357, MC3359, and MC3361 integrated circuits, which contain IF and squelch circuitry, are popular in scanners. In these receivers, look for the hysteresis resistor to be connected to these ICs.

Notes

1. The author cannot furnish modification information for other radios.

2. Don't attempt this, or any other internal modification, unless you are skilled in electronic servicing.

3. Make sure your receiver is disconnected from any power source before opening the cabinet.

Table 1. Squelch Hysteresis Resistor In Selected Receivers

As a future ham, maybe you should pay attention to the underlying point here, the reason these people are leaving ham radio. It is time for all of us as a group to broaden our horizons and look to the future. The attidude that "because I had to learn code, you should to" is obsolete and immature. I'm not suggesting that there is anything wrong with code. I just feel that there is PLENTY of space for everyone to enjoy our hobby and no one person should be excluded for ANY reason, including wether or not they want to learn an old and outdated form of communication. Should everyone who can't read latin be excluded from church?

What is also remarkable is how predictable you are. Any time anybody makes
a disparaging remark about Bill Cheek, you show up to defend him. Seems
what we have here is one net monkey jabbering about the other net monkeys,
eh? I was curious to see what you have contributed to rec.radio.scanner
since your last appearance in support of Cheek so I ran your name through
Altva Vista. What do you think turned up. Nada? Zippo. Nary a contribution
to this group. Go figure. Not surprising, a quick read of your posts in
other newsgroups shows a repeated willingness to insult people and an
overt reluctance to contribute.

Which reliable source sells the Optoelectronics CUB frequency counter
for a decent price? (excluding Opto themselves)
(I live in Ireland, what about import dues and shipping costs?)
I'd also like to hear from someone who's selling one used.
Are there any frequency counters in the Cub's price range which
are comparable performance- and feature- wise?
(I don't need reaction tuning)

Come to think of it, why aren't there any scanners that incorporate a
counter??

1426. "noisey" transmissions

Newsgroup: rec.radio.scanner
Date: 1996-04-17 00:00:00 UTC
From: Bob Newman <rfn@cho.ge.com>
Message-ID: <Pine.HPP.3.91.960417102535.2170D-100000@choh033.cho.ge.com>
Source record: 235924

I'm a newbie to scanners, and amateur radio in general, and have a question for some of the scanner / radio experts out there.

I recently got a portable scanner (Uniden SC150 hand-held) for monitoring pit <-> driver communications and radio and TV coverage at stock car races. The application is sort of unique in that you're only trying to monitor local broadcasts, so you either remove the antenna altogether, or use a little stub antenna. Don't know if this is a factor. I should also mention that there is generally a lot of broadcasting going on over the frequencies covered by this scanner, I'd guess about 50 frequencies. . .40 cars freqs, several radio and TV freqs, a couple of NASCAR freqs, etc. etc. I don't have the freq list with me, but if memory serves, most are in the 300-400 (MHz, KHz? I forget which) range, with a few in the 800+ range.

So anyhow, the problem is that on a *lot* of frequencies, the broadcasts have a loud, shrill squealing noise (for lack of a better description) that make it real difficult to listen to, much less understand, transmissions. Is anybody familiar with this problem? Is it intentional "jamming," to make life difficult for eavesdroppers like me, or is it another problem that can be cured or avoided?

Any help or advice appreciated. . .e-mail preferred.

Source record: 235928

I'm looking for the frequencies that the state police use on
the Garden State Parkway. I know they use to be on 154.9050,
I use to listen to them quite a bit.

I assume they have moved up to an 800 freq. and are most likely
trunked. I have been monitoring NJ State Police Troop "B",
hear lots of interesting things, but nothing that sounds like
the Garden State Parkway. Troop "B" (I think) covers North Jersey.

Has anyone been listening to them?? If you have would you be
willing to share the frequency information??

I would also be interested in frequency information on the NJ Turnpike.

E-mail or post, what ever is best for you! Thanks!

I also have a question on the Mortorola Radius P100. It
has a thin antenna, and I got a good look at the unit
from the receptionist, but there wasn't any label
on it. I've been scanning from the car to find
the freq, no antenna in autostore mode, but have had
no luck. Any pointers??

TIA

Mark

Hi Billy. I was pleasantly surprised with the "Scantenna" from Grove Enterprises in Brasstown, NC. I use a Diamond Discone as my other scanner antenna.

You are 100% correct. Bill Cheek always resorts to name calling and lying, and even sends email threats of physical harm to those he despises most. This is all documented and well known.

>way to get around this?

Just what you're doing. The IF passband on most scanners is wide enough
that you can get decent results by tuning a few KHz off. Other than that,
the channel increments are burned into the PRO-43 firmware and can't be
altered.

If you want a do-everything scanner that can have it's EEPROM field
reprogrammed, computer controlled, etc., get the ar8000! It's meant for
a scanner enthusiast. The only drawback is it's size. Not a bad size,
as it's smaller than the BC-2500XLT, but larger than the Pro-43. It has
its limitations, but all the bells and whistles are there!

Hello all,

This is a repost, unfortunately I had to change my email address.

The demo version of Scanstar for Windows indicates that a mod for the
Yaesu FRG-9600 exists that will allow 30-60 MHz reception. Does anyone
have info regarding this mod or any ideas as to where I might find it.
I have searched high and low and come up empty thus far. Any assistance
would be greatly appreciated. I called Scanstar and THEY didn't know
where that info came from...Thanks!

I was unable to get Scan Star for Windows to do anything on my computer without it crashing. I never used ScannerWear by RCSI but would not even use it if it were free for it is majorly copy protected. After something like 3 or 5 installs you have to get a new disk from them. I guess that they never heard of upgrading/crashing computers.

HAMFEST/COMPUTERFEST CALENDAR 1996 - NORTHERN ILLINOIS
last updated April 1, 1996 |

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (708)979-5414, electronic mail: parnass@lucent.com. Thanks to Dennis Dale and ARRL for providing information.

APRIL

April 14 (Sun), Madison, WI - Madision Area Repeater Assn Swapfest and Computer Fair. Dane County Expo Exhibition Hall. 4 miles west of Hwy 12 & 18 and I-90 interchange. Watch for Rimrock Road exit. Doors open at 8 AM. Admission $6 plus additional parking fee. Kids 10 and under free. Talk-in on 147.15 MHz, PL 123.0 Hz. Info: (608)245-8890.

April 21 (Sun), Arthur, IL - Moultrie ARK. Info: Ralph Zan-cha, WC9V, PO Box 55, Lovington, IL 61937, tel (217)873-5287

April 28 (Sun) - Computer Central, College of DuPage (see notes at the end of this article).

April 28 (Sun), Chicago, IL - Chicago ARA Ham Auction. DeVry Institute of Technology, 3300 N. Campbell Ave. starts at 12 noon. They will auction your electronic goods if you bring them in before noon. All goods subject to 10% dona-tion. If purchased back by the seller, then 5% will be due. All items sold as-is and all sales final. Info, call Dean (708)331-7764 morning or evening, or call George (312)545-3622 daytime.

MAY

May 5 (Sun), Sandwich, IL - DeKalb Hamfest. Sandwich Fair-grounds, intersection of Suydam and Gletty Roads, just north of Rt. 34. Admission $6 at gate, free parking. Talk-in on 146.73 MHz and 146.52 MHz.

May 11 (Sat) - Kankakee Area Radio Society, Peotone, IL. Will County Fairgrounds, I-57 to exit 327 east. Admission $5 at gate, free parking. Kids under 12 free. Info: Willis Bowser, K9IFO, 1210 North Riverside Dr., Momence, IL 60954-3452, tel. 815-472-2079

May 26 (Sun), Chicago, IL - Chicago ARC Hamfest. DeVry Institute of Technology, 3300 N. Campbell. 8 AM - 3 PM, setup at 6 AM. Admission $5 at door, free parking. Kids under 12 free. Talk-in 147.225, 444.825. Info, call (312)545-3622 or (312)486-6823.

May 26 (Sun) - Computer Central, College of DuPage (see notes at the end of this article).

JUNE

June 2 (Sun), Princeton, IL - Starved Rock RC. Bureau County Fairgrounds. Admission $5, free parking. Info: Debbie Burton, N9DRU, 1153 Union St., Marseilles, IL 61341-1710, tel. 815-795-2201 Usually an excellent hamfest, with sellers from Illinois, Iowa, and Wisconsin.

June 9 (Sun), Willow Springs, IL - Six Meter Club of Chicago. Santa Fe Speedway, 91st and Wolf Rd. Gates open 6 AM. Admission $5 at gate. Talk-in on 146.97 MHz (107.2 PL) or 146.52 MHz. Info: Joseph Gutwein, WA9RIJ, 7109 Blackburn Ave., Downers Grove, IL 60516-3925 tel: 708-963-4922. Good hamfest but, restroom facilities are usually filthy.

Jun 30 (Sun) - Computer Central, College of DuPage (see notes at the end of this article).

JULY

Jul 13 (Sat), Oak Creek, WI - S. Milwaukee ARC Swapfest. American Legion Post 434, Shepard Ave. Admission $5. Talk-in 146.52 MHz. Info (414)762-3235.

Jul 14 (Sun), Sugar Grove, IL - Fox River Radio League. Waubonsee Community College, Rt. 47 at Harter Rd. VEC testing. Admission $5 at gate, free parking. Info: Diana WD9API, (708)293-7485. Fair, small to mid-sized hamfest.

Jul 27 (Sat), Pecatonic, IL - Rockford ARA Hamfest. Winnebago County Fairgrounds. VEC testing at 1st Baptist Church, 7th & Washington. Admission $5. Kids 10 and under free. Info, Marsha Plasters (815)399-9233 or Diana White (815)645-8545.

Jul 28 (Sun) - Computer Central, College of DuPage (see notes at the end of this article).

AUGUST

August 18 (Sun) - DuPage ARC, Stickney, IL. DuPage ARC Hamfest Computer Show. Hawthorne Race Course, 3500 S. Cicero Ave. Air conditioned exhibit hall for dealers. Outdoor | fleamarket spaces free. 8AM - 2PM. 6 AM setup. Admission $5. Kids under 12 free. Talk in 145.25 MHz. Info: Ed | Weinstein, WD9AYR, 7511 Walnut Ave., Woodridge, IL 60517.

tel: 708-985-9256.

August 25 (Sun), Woodstock, IL - Tri-County Radio Group. McHenry County Fairgrounds, Rt. 47. Admission $5 at gate, free parking. Kids under 12 free. Info (voice/fax) (708)658-1678.

August 25 (Sun) - Vermilion County ARA, Danville, IL. Info: Gary Denison, KA9SKS, 14704 East 2750 North Rd., Danville, IL 61834-5610. tel: 217-759-7389.

August 28 - 30 - Antique Radio Club of Illinois, Elgin, IL. RadioFest96. Holiday Inn Holidome and Convention Center, 345 River Road, Elgin, IL 60123 Ph. (708)695-5000, (847)695-5000 After 01/20/96. Info: Jeff Aulik, 1708 Parkview Ave., Rockford, IL 61107 or Carolyn Knipfel, RR 3, 200 Langhorn, Morton, IL 61550.

SEPTEMBER

September 8 (Sun) - Bolingbrook ARS, Joliet, IL. Info: Ed Weinstein, WD9AYR, 7511 Walnut Ave., Woodridge, IL 60517, tel: 708-759-7005

September 13-15 (Fri, Sat, Sun) - Peoria, IL. ARRL National Convention. Info: Ron Morgan, KB9NW, PO Box 3508, Peoria, IL 61612-3508, tel: 309-694-2649

Sep 21 & 22 (Sat & Sun), Grayslake, IL - Chicago FM Club Radio Expo. Lake County Fairgrounds. Starts 6 AM. Buildings open 8 AM. VEC testing. Info, (708)457-0966. Usually one of the best hamfests in NE IL.

Sep 29 (Sun) - Computer Central, College of DuPage (see notes at the end of this article).

NOTES - Computer Central shows

Computer Central computer shows are held at the College of DuPAGE, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 708-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm.

Introduction to Scanning
by Bob Parnass, AJ9S

[NOTES: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. Free distribution is encouraged.]

This introduction is intended for people new to the
scanning hobby and is oriented to scanning in the USA. It
tells where you can buy your first scanner, what features
it should have, where to get it repaired if required, how
to get frequency information, and mentions a few scanner
clubs worth joining.

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Why Scanning?

Every day and night, scanner hobbyists are entertained by
what they overhear on their radios. Police cars, fire
engines, ambulances, airplanes, armored cars, trains,
taxis, and buses are all equipped with radios and you can
listen to them. You can monitor the local sheriff and fire
departments to hear about events "as they happen," before
the news reporters hear about them. Hostage dramas, bank
robberies, car crashes, chemical spills, neighbor and
domestic disputes, tornado sightings are all fair game. In
a single afternoon, you can hear a high speed police chase,
Drug Enforcement agents on a sting operation, and
undercover FBI agents as they stakeout a suspect.

How about listening to a presidential candidate discuss
strategy with his advisor from a 415 MHz radiophone in Air
Force 1, or a team of G-men protect him while transmitting
in the 167 MHz range?

Baby monitor intercoms are actually transmitters and you
can hear them between 49.67 and 49.99 MHz.

Stay ahead of road conditions by listening to highway road crews, snow plows, and traffic helicopter pilots. Many midwesterners monitor the state police and and county sheriff to learn of approaching tornados long before warnings are broadcast on TV and commercial radio. Take your scanner to sporting events and listen to race car drivers, football coaches, etc., in the 151, 154, and 468 MHz ranges.

Monitor the everyday hustle and bustle of businesses, from cable TV repair crews tracking down pirate descrambler boxes, to security guards at your nuclear power plant or mall security guards chasing a shoplifter.

Is Scanning Legal?

In the United States, scanning from your home or at work is perfectly legal in most situations. The Electronic Communications Privacy Act of 1986 made it illegal to listen to mobile phones, common carrier paging, and a few other types of communication. Public law 103-414, signed Oct. 25, 1994, amended the law (Title 18 USC, Part I, chapter 119, sections 25110 and 2511) and outlaws listening to cordless phones, too, but many scanners cover these frequencies, and it's clear that Americans still listen to whatever they want in the privacy of their own homes despite the laws.

It is now illegal for companies to sell recently manufactured scanners which cover or can be easily modified to cover the cellular phone frequencies, but sales by private individuals will still be allowed.

Speaking of privacy, federal law also requires you to keep what you hear to yourself and not use the information you hear on your scanner for personal gain.

Be aware that several states have laws pertaining to scanning while in your car. Indiana restricts some portable scanners. A few states have enacted their own laws against listening to cordless phones. You can find out about these restrictions in a paperback book, Listeners Lawbook, compiled by Frank Terranella, Esq. available for $9.95 + shipping from Grove Enterprises, PO Box 98, Brasstown, NC 28902.

What Scanner Should I Buy?

Radio Shack and Uniden (maker of Bearcat, Regency, and Cobra brands) offer a wide choice of scanners. Radio Shack scanners are actually manufactured by both GRE (General Research Electronics) and by Uniden. Personally, I don't recommend Trident nor many of the AOR brand scanners, although the AR8000 and AR3000 have good reputations.

Programmable (synthesized) units have replaced crystal controlled models as they don't require crystals and usually have a keypad that permits you to store frequencies into channels. Programmables are now so cheap it doesn't make sense to buy a crystal unit as your main scanner unless you get it for under $45 or so.

You can get a battery operated hand held scanner, a bigger "base" scanner which is powered from an AC outlet, or a mobile scanner which connects to your auto's electrical system. There are tradeoffs -- base and mobile scanners have larger displays and almost always provide more audio than portables, and some portables are more prone to interference when connected to outdoor antennas than base models. But when severe weather knocks out the power in your home, there's nothing like having a battery operated scanner to monitor the power utility and police frequencies!

Make sure your first scanner:

1. has a "search" feature, which allows it to search all the frequencies between two frequency limits of your choosing. The lowest cost programmables can't search.
2. covers the 800 MHz band. Usage of the 800 - 950 MHz band is growing fast and you will miss out on the action unless your scanner covers this band.

If you're not sure whether you'll like scanning, don't want to spend much money, a 40 channel radio will do. In general, the more channels and banks, the better.

Most of the action takes place on frequencies between 30 and 1000 MHz, so don't be misled by scanner models boasting coverage from 3 to 2000 MHz. There's currently not much to monitor in the 1000 - 2000 MHz range.

If you are interested in receiving short wave, that is, signals in the 3 - 30 MHz range, it's best to get a short wave radio specifically designed for that purpose. Although some scanners receive the short wave band, their performance in that range is often second rate.

Deluxe scanners can be controlled and/or downloaded by a personal computer, a feature which appeals to a small but growing number of scanner owners.

Almost all low and mid-priced scanners are prone to receiving images -- receiving the same signal erroneously on two or more frequencies. With a few exceptions, images are unwelcome due to the interference they cause, e.g., hearing aircraft transmissions while the scanner is tuned to the local police frequency. Premium quality scanners use "up conversion" circuitry, a scheme which greatly

reduces, but does not eliminate, image reception.

Currently, the more popular scanners include the Uniden/Bearcat BC760XLT (a/k/a 950XLT) and discontinued Radio Shack PRO-2006 base/mobiles, the Uniden/Bearcat BC200XLT (a/k/a BC205XLT), BC220XLT, and Radio Shack PRO-43 portables. A number of owners report problems with the Icom R1 portable and the older Uniden/Bearcat 8500XLT base and 2500XLT portable. The new Uniden BC9000XLT base and BC3000XLT portable work very well and are my current favorites.

Considered by many as the best scanner ever made, the 400 channel Radio Shack PRO-2006 was replaced by the 1000 channel PRO-2035, which was replaced by the PRO-2042. The portable Radio Shack PRO-62 and PRO-60 are good performers. All five models employ up conversion and are made for Radio Shack by GRE (General Research Electronics).

Scanner Antennas

All scanners come with a built in antenna, permitting reception up to about 20 miles or so.

Portable scanners are supplied with a helical (spring shaped) antenna, covered by rubber. The rubberized antennas furnished with current models are too stiff and place stress on the antenna jack. Older scanners to be supplied with more flexible antennas. I prefer to replace the stock antenna with an Icom FA-1433B dual band flex antenna which is thin and very flexible while providing better performance than a stock antenna.

Although it is small and somewhat tolerant of physical abuse, the range of a heliflex antenna is very limited. Augmenting it with a 19" telescoping metal antenna can improve portable reception greatly.

Since 1988, I've used the "Thin-Stick" 18 inch telescoping antenna for extended range on my portable scanners and 2 meter walkie-talkies. The Thin-Stick, made in USA by Smiley Antenna Co., Inc., is designed to cover both the 2 meter and 220 MHz bands, but its variable length means it can be adjusted for optimum performance on other bands. What makes the Thin-Stick different from an ordinary telescoping antenna is the spring between the antenna and the connector portions. The spring absorbs most of the impact if the antenna collides with an object. The street price is about $17 and it is available from Amateur Electronic Supply, Milwaukee and other retailers.

Outdoor antennas, like the Channel Master 5094A or Antenna Specialists AV-801 (recently discontinued), can extend

reliable reception to 100 miles or more. If you do use an outdoor antenna, be sure to disconnect and ground it during storms and when not in use to avoid a lightning hazard. Discone and ground plane type antennas can be more prone to cause scanner damage due to static charge buildup because they are not at "DC ground."

Coaxial Cable Feedlines

If your antenna installation requires more than 50 feet of feedline, use RG213/U or high quality RG8/U coaxial cable. RG213/U has a non-contaminating jacket and will last longer. Each has an outer diameter of about 13/32". Similarly sized Belden 9913 cable and clones have lower attenuation but are difficult to bend, require special connectors, and can accumulate moisture inside because they are hollow.

If you must use a small diameter cable for long runs, use RG6/U. Avoid RG58/U (7/32" OD) due to its losses at high frequencies. RG8/X (1/4" OD) is suitable for short patch cords.

Where Can I Buy A Scanner?

Almost every community has at least one Radio Shack store, and you can find scanners there. Discount chain stores like Wal-Mart, K-Mart, Service Merchandise, and Circuit City sell scanners, but carry just a few models. Department stores, like Sears Roebuck and Montgomery Wards, sometimes offer low end scanners, although at high prices.

The best buys on new scanners are from reputable mail order radio dealers, for example:

- Grove Enterprises, 300 S. Highway 64 West, Brasstown, NC 28902. For a free catalog, call (704)837-9200. Telephone (orders only): (800)438-8155.

- National Tower Company, PO Box 15417, Shawnee Mission, KS 66215. Telephone (913)888-8864.

- The Ham Station, 220 N. Fulton Ave., Evansville, IN 47719-0522. Telephone (800)729-4373, (812)422-0231.

- Scanner World (Albany, NY). Telephone (518)436-9606.

- Amateur Electronics Supply (Milwaukee, WI). Telephone (800)558-0411.

Beware of inflated "shipping and handling" charges and be sure to include these when comparison shopping.

Used scanners may be found at hamfests, flea markets, garage sales, or listed in the classified advertisement section of your newspaper.

Modifying Your Scanner

The term "mod" is often used as shorthand for "modification." If you are handy with a soldering iron, you may be interested in modifying ("modding") your scanner to add features or enhance its performance. Be warned this usually voids your warranty and current models are difficult to service due to the small, delicate surface mount components. By federal regulation, new scanner models cannot be easily modified to tune the cellular phone bands.

The term "mod" has been narrowly used by some people to mean a change which permits a scanner to receive cellular phone frequencies. This definition is far too restrictive as there are several ways one could modify a scanner, e.g., changes to improve audio quality, adding an S-meter, expanding the number of channels, changing the earphone jack to accept stereo headphones, etc.

Modification article files can be copied from several ftp sites including the /pub/ham-radio/mods directory at:

garfield.catt.ncsu.edu
oak.oakland.edu (IP address 141.210.10.117)

KD4MOJ maintains a scanner modification server for people without FTP access. You can request a list of scanner modifications by sending electronic mail with the words GET INDEX.TXT to FTPmail@exchange.tlh.fl.us

If you cannot find files describing modifications to a particular scanner, it's probably because nobody bothered to devise a modification, or more likely, nobody has taken the time to document their modification.

Modification articles posted on Usenet seem to have a life of their own. Frequently, they are plagiarized from the Internet and compiled by book, CDROM, and magazine publishers, sometimes reworded, then sold. Hobbyists then copy the modifications from the books, CDROMs, and magazines back onto the Internet or BBSs (bulletin board systems)!

Grove Enterprises and other companies advertise a warranted, modification for fee service.

Scanner Repair Shops

Is your scanner broken? Aside from sending the scanner back to the manufacturer for repair, here are least two

companies which repair scanners:

1. Electronic Repair Centers (telephone 708-455-5105) - Several people have been pleased with good repair service from Electronic Repair Centers in Franklin Park, Illinois. Although they are not authorized to perform warranty work, this outfit has been repairing Bearcat scanners for several years. They charge a flat rate of fixing scanners, and shipping is extra. Electronic Repair Centers will fix Regency scanners if they can obtain the parts.

2. G & G Communications (telephone 716-768-8151) - This family owned company repairs scanners and pagers and stocks parts for several older models. G & G cannot usually repair AOR scanners due to lack of manufacturer support. G & G sells and sometimes buys old scanners and parts, too. They are located at 9247 Glenwood Drive, LeRoy, NY 14482.

Where Can I Obtain Frequency Information?

To avoid chaos, the FCC licenses two-way radio users and assigns them specific frequencies. Groups of frequencies are allocated to specific types of users, so you won't usually find fire departments using the same frequencies as taxi drivers, for example.

Scanner enthusiasts can obtain frequency information from several sources, including books, government microfiche records, or other listeners.

Books: The most convenient source of fire, police, and local government frequencies is Gene Hughes' Police Call, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and larger book stores. The 1996 editions contain selected business listings, too, although callsigns are listed only for local government and public safety licensees.

I also recommend the book, Monitor America, published by SMB Publishing (now known as Scanner Master Publishing), and available from Grove Enterprises for about $30. A new, 1100 page 3rd edition is now available. Monitor America contains several pages of police, fire, local government, news media, sports, federal government, and commercial broadcast frequencies for all 50 states. It contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees,

listing even the smallest of towns.

Uniden has published several regional directories using the "Betty Bearcat" name, although there are much better directories available from Scanner Master (Newton Highlands, MA, tel. (508)655-6300) for some regions.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Commercial Magazines: Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times (tel. 704-837-9200) and the sensationalistic Popular Communications, (tel. 516-681-2922). National Scanning Report is a national scanner magazine published bimonthly and is affiliated with Uniden's Bearcat Radio Club. Early issues disappointed experienced scanner hobbyists, but it now has a good column on scanner modifications and has greatly improved its coverage of east coast frequencies since merging with NESN (North East Scanner News). The best scanner frequency lists are often found in club publications, not commercial magazines, and are discussed later.

Government Records: Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS). The high cost of buying government records limits their appeal to hardcore enthusiasts. You can write for a catalog of FCC Master Frequency Database items to the NTIS, 5285 Port Royal Road, Springfield, VA 22161.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about

$100. The PerCon Spectrum CDROM sells for $29 and contains a handful of fields for every FCC license in the US. The Spring 1995 edition works in DOS, Windows, and Mac environments.

Grove enterprises sells FCC license information on CDROM for $100. In the 1995 edition, fields are different than PerCon's Spectrum CDROM but the data appears to be of the same vintage. The licensee name and licensee city are used instead of the DBA (doing business as) name and transmitter city which makes query results confusing.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including an 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $20.95 plus $5.00 shipping and handling. For an additional $4.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $25.95 for standard or $29.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (708)554-3839 6-10 PM central time. For a brochure, send SASE.

Do Your Own Frequency Detective Work

When you try listening to a frequency for the first time, you'll want to know who you're hearing.

Although FCC rules require radio systems to identify their operations with their assigned call letters either automatically or verbally, most ignore the regulation. This often makes it difficult to know who is transmitting. Moreover, many radios are now being placed in service illegally, without first obtaining the required FCC license.

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and try to determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

You can examine the FCC license on premise. I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the mall

security office or company guard shack. You can examine the labels on radio equipment. Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret. Hobbyists are urged to exercise a modicum of restraint and good judgement, however.

How Can I Use Equipment
to Uncover New Frequencies?

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. A few models, like the ICOM R7000/R7100, and R1, and older Bearcat 250 and Regency K500, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy, a Radio Shack CTR-82 will do. It's best to use a shielded, attenuating cable to feed the scanner audio into the recorder rather than relying on the recorder's internal microphone.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an

outside antenna, and a frequency counter for close-in work.

Are There Any Scanner Clubs?

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than any pile of magazines.

The world's largest scanner club is the Radio Communications Monitoring Association (RCMA). Founded in 1975, the RCMA is the "first national and international organization of monitor radio listeners." There are several regional chapters which hold regular meetings. Club dues are $27.00 per year, which includes the monthly Scanner Journal, approximately 50 pages in 8-1/2" x 11" format. Although the focus is on VHF and UHF ranges, there is coverage of HF utility stations below 30 MHz. The RCMA web page is at http://comp.uark.edu/~plaws/rcma/. The RCMA electronic mail address is RCMAHQ@GEnie.com.

Inquiries about RCMA membership should be sent to RCMA General Manager, P.O. Box 542, Silverado, CA 92676, USA.

All Ohio Scanner Club

A smaller club is the All Ohio Scanner Club. Its bimonthly publication, The American Scannergram, is about 60 pages long. Although concentrating on Ohio and the Northeastern states, there is frequency information from other states, and plenty of good product reviews and scanning tips.

Annual dues are $18.50 and more information is available from:

Dave Marshall, Managing Editor
All Ohio Scanner Club,
50 Villa Road,
Springfield, OH 45503.

Chicago Area Radio Monitoring Association

The Chicago Area Radio Monitoring Association (CARMA) is the foremost club for scanner radio hobbyists in the northern Illinois area. CARMA was formed from the Chicago chapter of the Radio Communications Monitoring Association (RCMA), and we have been meeting since the early 1980s.

Many CARMA members are active in ham radio and GMRS, but the club is devoted to scanning and scanners.

Meetings are held on Saturdays, many at area restaurants, about 6 times a year. Although lunch starts at noon, the meetings begin officially at 1 PM and often run until about

4 PM. You must purchase a lunch since we get the room for free. Meetings consist of a quick review of club business, sometimes a special presentation, and a "round table" discussion/question & answer session. Large quantities of information and frequency lists are often distributed in the form of free handouts. Members often sell radio equipment at the meetings, too.

In addition to regular meetings, there are two CARMA picnic/field days during which members meet at a park, erect antennas, eat, and operate scanners from battery power. CARMA members take organized tours of various communications facilities in the area.

Club meeting dates and times are published in the CARMA newsletter, published 6 times a year. A one year subscription is available by mailing a $15 check, payable to Kim Moran, to:

CARMA
P.O. Box 2681
Glenview, IL 60025

Some CARMA members participate on the CARMA computer bulletin board, run by Will Sperling. There is a $15 annual fee for the BBS. If you have a modem and terminal or computer, you can reach the CARMA BBS by calling (708)852-1292.

All meetings are held on Saturdays at locations announced in advance. Meetings are usually held at: |

- the Destiny Restaurant, on Rand Road, in Des Plaines, |

- Philly's in the shopping center at the corner Rt. 83 |
and 53rd St. in Willowbrook, |

- The Great Escape, on Irving Park Road, Schiller Park |

and at other restaurants.

HOW DO YOU FIND THESE SCANNER FREQUENCIES?

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. Free distribution is encouraged.]

I am often asked, "How do you find these frequencies?"
Scanner enthusiasts can obtain frequency information from
several sources, including books, government microfiche
records, or other listeners.

Books

The most convenient source of fire and police frequencies
is the Police Call, published each year in 9 regional
volumes by Hollins Radio Data, and sold at Radio Shack and
larger book stores for under $13. Police Call is basically
a computer printout of FCC license information in the fire,
police, local government, and conservation services in two
lists: by licensee name within state, and by frequency.
Later editions have included a few pages of local airport
and nonsensitive federal government frequencies. The 1996
edition contains selected business frequencies, too, but
callsigns are listed only for local government and public
safety licensees.

I highly recommend Richard Barnett's 1992 book, Monitor
America, published by Scanner Master Corp. A 3rd edition
is expected soon and will be available from Grove
Enterprises for about $30. This second edition is crammed
full of police, fire, local government, news media, sports,
national park, and commercial broadcast frequencies for all
50 states. The information was compiled mainly from
members of the world's largest scanning club, the Radio
Communications Monitoring Association (RCMA). Monitor
America contains detailed communications system profiles
and precinct maps for major metropolitan areas. Police and
fire radio codes and unit identifiers unique to local

agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns. A 3rd edition is expected in early 1995.

Scanner Master also publishes regional frequency guides for Illinois, Florida, Virginia, Massachusetts, New Jersey, and other states.

Aeronautical frequencies are covered in the Aeronautical Frequency Directory, written by Bob Coburn, W1JJO. Although most of the information is about civilian aviation, Bob included sections on military mid-air refueling and CAP. The 401 page third edition is available from Official Scanner Guides (P.O. Box 525-NS, Londonderry, NH 03053). The same publisher sells the Maritime Frequency Directory and frequency guides for several New England states. Some of these books are available through Radio Shack, too.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range. Since the US government no longer offers frequency information for its own stations, and has never published sensitive frequencies, most of the information in Kneitel's book has been collected from listeners over the years. It is certainly not complete, nor 100% accurate, but is a good book for this difficult to obtain information.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Magazines

Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times and Kneitel's sensationalistic Popular Communications.

Government Records

Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS).

These lists contain license information for the industrial (e.g. Illinois Armored Car, Pinkerton's Security, Joe's Towing, etc.), highway maintenance, commercial broadcast, aviation, common carrier, and maritime services, as well as for police and fire. For more info call NTIS at 703-487-4630.

Microfiche is not for the casual hobbyist, but rather for the ardent listener, who can easily spend a few hundred dollars for the fiche, not including the price of a microfiche reader.

Back in "the good old days," Grove Enterprises sold copies of some FCC microfiche files, and this was much cheaper than buying directly from NTIS. Grove no longer sells microfiche, but sells information on CDROM for $100 instead. In the 1995 edition, fields are different than PerCon's Spectrum CDROM. The licensee name and licensee city are used instead of the DBA (doing business as) name and transmitter city which makes query results confusing.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on both floppy disks and CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100. The new PerCon Spectrum CDROM sells for $29 and contains a handful of fields for every FCC license in the US. It works in DOS, Windows, and Mac environments.

Companies have appeared which are "plugged into" the FCC licensing system and they sell computer time allowing on-line file access. They also sell paper copies of FCC information. Washington Radio Reports is one example. A monthly publication, it lists license applications made to the FCC. A few members of my scanner club subscribe and share the information with me.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including an 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $20.95 plus $5.00 shipping and handling. For an additional $4.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $25.95 for standard or $29.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (708)554-3839 6-10 PM central time. For a brochure, send SASE.

Federal Radio Stations - Not Licensed by FCC

Since federal government radio stations are not licensed by the FCC, they are not listed in FCC microfiche. In 1981, a group of 60 radio hobbyists split a $1300 fee, and obtained 80 microfiche cards of 'sanitized' information about federal government radio stations under the Freedom of Information Act (FOIA)1. Only 12 of the 21 information

fields for each station were furnished. Fields like "Remarks", which indicate the exact usage of a channel (e.g. "Sky Marshall's Net"), and "Bureau", indicating agency subdivision (e.g. TAC within the USAF), were withheld. These 80 pages of microfiche were sold by Grove Enterprises for $25, but are no longer available from that source. Private entrepreneurs have been known to ask $125 or more for a set! In a step backward, the US Government insists it will no longer release this type of information - it is now 'classified'2.

For a reason unknown to this author, the government released a 1984 vintage set of frequencies allocated to the FAA. Perhaps this was a mistake, because the information is marked 'unclassified', but all fields are furnished, including some which indicate security related usage. Grove sold this set of 33 microfiche cards for about $13.

Two way radio equipment formerly used by the armed forces often appears for sale at hamfests. Less often, Secret Service and FBI radios appear there from time to time, too. When you see such equipment, look over the radio for a frequency label and write down the frequencies stamped on the crystals or channel elements. Make note of any service or property tags which specify the agency or military base which used the equipment.

Radio Clubs

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than a pile of magazines.

Since the early 1960s, I had been an amateur radio operator, and belonged to amateur radio clubs, but I never realized there were any scanner clubs! In 1983, I joined the world's largest scanner club, the Radio Communications Monitoring Association (RCMA).

Founded in 1975, the RCMA is the "first national and international organization of monitor radio listeners." There are several regional chapters which hold regular meetings. Club dues are collected annually, which covers a monthly newsletter, the RCMA Scanner Journal, about 50 pages long. Although the focus is on VHF and UHF ranges, there is coverage of HF utility stations below 30 MHz. A recent liberalization of club policy now permits the printing of most federal law enforcement frequencies, e.g., Secret Service, FBI, Customs, and DEA. The RCMA electronic mail address is RCMAHQ@GEnie.com.

Inquiries about RCMA membership should be sent to:

RCMA General Manager
P.O. Box 542
Silverado, CA 92676
USA

Another club which prints sensitive federal frequencies is the All Ohio Scanner Club. I enjoy its bimonthly publication, The American Scannergram, which is about 60 pages long. Although concentrating on Ohio, there is frequency information from other states, and plenty of product reviews and scanning tips.

More information is available from:

All Ohio Scanner Club
50 Villa Road
Springfield, OH 45503

Do Your Own Sleuthing

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

What Makes Station Identification Difficult?

In most instances, FCC rules require radio users to identify their operations with FCC assigned call letters. Police and fire departments, especially those with trained radio dispatchers, seem particularly conscientious about station identification. Like commercial broadcasters, many of these stations identify on the hour and the half hour.

Some repeater stations have Morse code identification circuits which transmit call letters on a periodic basis, insuring compliance with FCC rules.

On the other hand, over 75% the industrial radio stations monitored within the last year ignore the FCC regulation, making it difficult for a listener to identify a station. Some stations may operate for years using the nondescriptive "base to mobile 2" or "Joe to base" protocol. One rung up the hierarchy are stations that identify using something like "Acme base to 107", giving the listener a clue for his log. If call letters are given, they are often rendered unintelligible by operators who fail to enunciate. The failure to identify is more likely due to sloppiness, rather than any attempt to hide station identity.

While not regulated by the FCC, federal government radio stations vary in the extent to which they identify their transmissions. Some federal stations do not have call letters. A nearby paging transmitter periodically transmits a voice recording announcing, "This is the Army Joliet Ammunition Plant." What more could a listener ask for?

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy. I use two modified Radio Shack CTR-75 recorders, a discontinued model.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

The following examples illustrate techniques I've used to derive new frequency information.

Examine the FCC License on Premise

I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the Bell Labs security office and the guard shack at Waste Management's Greene Valley Landfill in Naperville.

Examine the Labels on Radio Equipment

Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto

terminals, it's not uncommon to find Dymo or P-Touch tape labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret.

- At the annual Glenview Naval Air Station open house, I examined a military manpack radio being used by dispensary paramedics. The radio's tuning dial was set at 34.15 MHz.

- The Illinois Army National Guard displayed two armored personnel carriers at the local county fair, each equipped with VHF-FM and HF-SSB transceivers.

In addition to a tuning control (VFO), the VHF-FM radio had a set of channel select pushbuttons, much like those in a car radio. I asked a guardsman a few questions about the radio, and he demonstrated the channel preset feature. A panel above the channel pushbuttons was labeled with the frequencies: 32.055, 34.45, 35.35, 40.55, and 40.60 MHz.

- An Army National Guard UH1 helicopter was displayed at the Marseilles armory "open house". The public was permitted to climb aboard, and observe the instrumentation and radio gear. A channel plate on the instrument cluster listed over a dozen frequencies.

Hobbyists are urged to exercise a modicum of restraint and good judgement. In New Jersey, a radio technician/hobbyist called to service a transmitter in a county building, noticed a new unattended repeater installation in the same room. Being curious about what frequency this repeater was on, he opened the access door to copy the frequencies from the radio's crystals. It turns out that this radio belonged to the US Secret Service, and opening the access door could have activated a "tamper alarm"!

The tech was skating on thin ice. He had nobody's permission to tamper with that equipment.

Another source of frequency information is as close as your nearest Radio Shack store. Some Radio Shack stores make a local frequency list available to assist their scanner customers. Be sure to ask. Stores located in shopping malls almost always know the mall security frequencies. I often check the frequencies programmed into the floor model scanners, too.

Equipment to Determine Frequency Usage

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. Some models, including the Radio Shack PRO-2035, ICOM R7000/R7100, Bearcat 2500XLT, and Bearcat 250, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, another spectrum analyzer connected to a receiver IF stage, and a frequency counter for close-in work.

How Can I Determine To Whom I'm Listening? - An Example

While scanning the industrial frequencies in the 150 MHz range, a van driver was overheard communicating with "base" while driving around my town. The stations involved never used FCC call signs -- this would have made life a lot easier for me, and legal for them! (one may use FCC license microfiche, described earlier, to identify stations using call letters.) Transmissions were short and infrequent, so it was decided to tape record all transmissions on this frequency for several days to determine the station's identity.

During daylight hours, a modified Regency K500 scanner was left tuned to the target frequency, connected to a cheap tape recorder through a home built interface. Using a carrier operated relay, the tape interface supplied power to the recorder only during radio transmissions, so a day's worth of traffic could be compressed into a 45 minute tape.

Each day, the tape was played back and notes on names, locations, and activities mentioned during the day's transmissions were taken. The van driver appeared to be making daily stops at a local bank and two shopping malls. A Walgreen's store seemed to be the only stop at one mall. A few times, "base" ordered the van "back to the Training Center." There were frequent references to "guests checking out", "dropping a guest off", and "instructor[s]

missing a class". At times, "base" spoke with "security", who must have been using a walkie-talkie as his signals weren't strong enough to hear.

Was this a hotel? Calls to the three local hotels revealed that none provides shuttle bus service to the shopping malls. A call to the Walgreen's, inquiring about bus service to the store, drew another blank. During my shopping trips, I began to pay closer attention to vans with antennas driving through the parking lots.

I was leaving the mall one day, when a week's effort paid off. A maroon and white van, equipped with a VHF-Hi antenna, was dropping shoppers off at Walgreen's. A sign on the van's door read:

XYZ Central Training Center (XYZ is a pseudonym for the actual licensee name.)
Lisle, Illinois

I watched the driver pick up a microphone, and listened to him on my portable scanner checking back with his "base".

All the pieces fit: the "guests", the "classes", the "instructors". Mystery solved; I had been monitoring the customer training center for a large computer manufacturer. The training center has hotel rooms and dining facilities to accommodate students from out of state. As a convenience, shuttle van service is provided to local shopping malls.

Summary

Through books, government records, and radio clubs, scanner listeners can make use of frequency information compiled by others. Two-way radio users often fail to identify their transmissions properly, making it more difficult for listeners to know who they are monitoring. By examining radio equipment labeling, and monitoring and taping transmissions, scanner enthusiasts can unearth new information.

1456. pro-43 can't get 452.63 MHz

Newsgroup: rec.radio.scanner
Date: 1996-04-17 00:00:00 UTC
From: cjvan@ncn.net
Message-ID: <31748693.3781477@news.netins.net>
Source record: 236039

Hi,

I have a pro-43 scanner. There is one particular frequency in my area that I am interested in monitoring. 452.630 Mhz. However, the pro-43 only monitors 452.625 when I put this particular one in. Is there any way to get around this?

Thanks!

No, it is obvious that you didn't pay attention to the rules when they were
posted. They were discussed on the echo for several weeks after being posted
in draft form.

>You've always been known as a BC croonie anyway. No disputing that

From: flashbyt@shore.net
Message-ID: <4l1uig$46v@shore.shore.net>
Source record: 236043

: someplace inside your apartment to place one of these discones (and
: assuming the apartment is not a dead zone for radio waves) you could
: give it a try. Alternatively, you could place one on a small mast and
: place it in the corner of your balcony when you wish to scan.

I read a review of this on a web page somewhere saying the base was not very good. Given my past experiences with Radio Shack products I tend to stay away. However, I think I am going to take your advice on this one. Is there a way I can improve on the base of the discone. If I remember correctly (correct me if I am wrong), having a better base will focus more energy onto the elements.
What about grounding it? I noticed my 3 foot magnetic antenna (Hustler) works okay in my apartment but *terrific* when placed on my car. Should I somehow take advantage of a cold water pipe with the discone?
Thanks for the great response and post!

Get on the mailing list of DAMARK at (800)827-6767. They have factory reconditioned BCT-7's in the $140-150 price range. If you join the preferred buyers club, you also get 10% off. (Realize that the cost to join the preferred buyer's club makes you buy more to realize the savings!)
Great unit. At a good price I'd buy another!

Message-ID: <4l726m$lj3@newsbf02.news.aol.com>
Source record: 235751

I tried the Pro-51 test mode trick, and I guess they closed up that loophole. Every channel was identical to the doc file that was posted here, except of course for #23, which is now 857.??? mhz. I guess they figured that they couldn't leave that easy of mod in the product... Incidentally, the date code on mine is 1a96, which means January of 96. Maybe we can figure out the month that they took the trick out if enough people check.

One other peculiarity I noticed when I had mine apart : On the 800 mhz unit, which is the board soldered perpindicular to the main board, there is a chip that says "CIA" in very small letters. Hmmm, is this so the government can monitor what we are listening to???? Maybe!!!!

I'm afraid that the cable impedance is of some importance. Assuming the antenna is a nominal 50 Ohm then the 75 Ohm coax creates a 1.5:1 VSWR. There are a number of tables (ARRL Handbook, IIT Engineering handbook) that will show the increased loss (over and above the matched loss/ft) created by the higher VSWR. Tv splitters are also 75 Ohm and nominally have a 3.5 dB loss @VHF and 4dB@UHF.
The idea of RG8 is a good one. The cable is only a little more expensive and will allow soldered connectors unlike the RG6 w/ its aluminum foil and drain wires.

There is a great web site for all Long Island frequencies at:

http://www.li.net/~j4dice/scanli.html

It seems to be updated frequently.

While it isn't simple programming, the 30-68 range (normally disabled on the international model) can be enabled by adding a diode in position D2. Reception may be slightly poorer in that range, as the front end is tuned for 68-88 MHz.
Download a Pro-43 modification file and follow the instructions to access the diode group. Ignore the instructions about D4 & D3, which are talking about the U.S. model. If you don't have a surface mount diode to install, a conventional signal diode should work with some judicious lead bending and soldering.

=====
What you say is true, but irrelevant.
Your IC2SRA is not a scanner.
The ruling you refer to only covers *amateur radio* equipment, and not
scanners. Both the FCC and the ARRL have said this.
As you can see above, the original question was referring to "a portable
scanner", not an amateur radio rig.
Many states and local jurisdictions do, however, say that hams can carry
scanners where they are otherwise restricted, but that's not a Federal
thing, it's local.
Hope this helps.

If you are talking about BC200XLT battery packs, that's not true. The connector on the back of the BP200 wants 12VDC/500mA regardless of it is a AC to DC adapter or cigarret lighter cord. It has a small circuit board inside that deals with charging the battery. That's where the red LED is mounted on.

>You probably don't want to
>keep them on charge all the time you're in the car, though --
>continuous charging can eventually damage the batteries.

That is very true. Extended charging just heats up the batteries and shortened their life, unless you have some sort of trickle charging circuit.

Jim, where did you get your enhanced nicads for your BC2500xlt? How much did they cost?

I've got a BC3000xlt which takes the same battery pack and would like to get more time out of each charge. BTW, is charging time the same for the enhanced nicads?

Cheers, Ron Cain

I'm looking for a handheld CB radio.

I've recently removed an under-dash unit to mount a cell phone in that location (too many toys, not enough space!) but I'd like to have a CB handheld as a back-up or to talk to truckers.

I borrowed a Radio Shack TRC-217 (I think that was the number) some time back and that seemed to be pretty close. It was easily portable covered 40 channels and was good for at least a mile or two. That's all I'm looking for. Something like that would probably do just fine.

Drop me a note if you have something like this.

PS - I have a lead on a TRC-214, but I believe that is a three channel unit, and I'd rather go with the full 40 if there's one out there.

CB Radio for sale:

Cobra 19 23-channel CB radio, good condition, $25.00

Package includes:

- CB Radio
- Bracket Screws (Radio to Bracket)
- Microphone
- Magnetic Mount Mike Clip

Features include:

- On/Off Volume Control
- Squelch Control
- Channel Selector
- Modulation Indicator Light
- External Speaker Jack

This CB traveled quite a few miles with me, but moved from the car to the basement when I got my cell phone. Too many toys, too little room! It worked fine last time it was installed in my vehicle.

My $25 asking price includes shipping. For a local sale, I will throw in a magnetic mount CB antenna. (I don't think I'd want to package that for shipping!)

Note: The mounting bracket itself is hiding from me. It may be here somewhere, but I'm not sure. That's why I didn't include the bracket in the package description.

- Dave

Hmmm... not sure. The RS discone uses three vertical radiators and
three horizontal radials. In theory (if it is properly designed) the
radials and radiator elements should work together efficiently. I'm
not sure how you would modify it to be more efficient.

> What about grounding it? I noticed my 3 foot magnetic antenna (Hustler)
>works okay in my apartment but *terrific* when placed on my car. Should I
>somehow take advantage of a cold water pipe with the discone?
Not needed. The Mag-Mount is basically a 1/4 wave vertical (or
perhaps 1/2 wave or 5/8 wave) which really requires the use of a
ground plane for it to be efficient (which is perfect use for a car
which is your ground plane). In your apartment, if you could put it
on a metal shelf or metal bookcase you might get some improvement ---
I did when I was using my 1/4 magmount indoors. The radial rods on
the discone should provide that type of virtual "ground plane" for
this antenna.

Hi Charles,

I have made a number of scanner antennas - Jpoles, ground planes,
stacked folded dipoles, even a couple of yagi's and a quagi.
My materials of choice are white PVC pipe, common copper electrical
wire, brass hobby rod, and 5-minute epoxy. The construction methods
are within the grasp of the average handy-klutz. Once you understand
the basics, it's a great way to make good, inexpensive antennas.

>There seems to be a lack of information in this area.

Not at all! There are all sorts of books about antenna building. The
ARRL handbooks are very helpful. The ham magazines are always
printing articles on home-made antennas.

I haven't build an all-band antenna like a discone, but I've found
that large ground planes do pretty well on higher bands.

Check out rec.radio.amateur.antenna for some ideas and homepage links.

Very interesting thanks....

I"m still looking to get a hold of a Gee/Wiz mod but the
guy who makes them so far has not answered his phone or
retruned my two calls. I've send email we'll see how that
works.

Check out the I'net search routines, e.g., http://www.search.com/, for "uniden" and "bct-7" and see what you can find. From what I have seen in my research, prices are around $190. If you want a 30-day return policy, QVC has/had it for about that same price, but the tax + s/h raise the price over the median mail-order price. Most places don't have a 30-day return policy; one place was generous enough to have a 10-day return policy and another (Radar City) has an all-sales-final, no-returns-for-any-reason policy.

1499. Does ANYBODY repair Yupiteru radios in the US?

Newsgroup: rec.radio.scanner
Date: 1996-04-18 00:00:00 UTC
From: mod@world.std.com
Message-ID: <Dq1Dwr.3Mr@world.std.com>
Source record: 235842

Until recently I would have described myself as a satisfied owner of my Yupiteru MVT7100 and I would have recommended one to anyone who asked. However, if my recent experience is any indication, Yupiteru radios may have one very serious problem:

!NOBODY WILL REPAIR THE DAMNED THINGS!

Even Mr. Jonathan Clough, a fellow who normally appears to be very helpful and who posts frequently in this group, has so far not responded to my emailed requests for information on how I might get my MVT7100 repaired. Now, I'm hoping that this is simply due to email problems, or else to his reluctance to advise me from across the Atlantic; I certainly hope it isn't due to his keeping an embarrassed silence about the total lack of repair options for owners of these radios.

I ask again: Does anybody perform factory authorized repairs on Yupiteru radios in the US? Failing that, what should I worry about regarding shipping the thing back to Japan for repair? Or should I trust some local J.Random radio tech to know what he's doing? The recharging circuitry appears to be what's busted - the unit works just fine with batteries installed - so is the design of the recharging circuitry standardized to the point that J.Random radio tech can reverse engineer it? Them dang little surface-mount components don't appear to be the sort that lend themselves to reliable reverse engineering.

Somebody, please - tell me I have some reasonable options here...

Regards,

Michael O'Donnell mod@std.com

1500. 800 Mhz Found the best scanning radio around TK-940

Newsgroup: rec.radio.scanner
Date: 1996-04-18 00:00:00 UTC
From: ronkatz@interlog.com
Message-ID: <4l4cg9$hfm@steel.interlog.com>
Source record: 235843

The best 800mhz radio for scanning Kenwood TK-940

Well I now have 4 Kenwood TK-940 radios.

The TK-940 is a 800mhz FM transceiver for trunked and
conventional frequencies. What makes this a better
radio for scanning then a scanner? Well its a commercial
two-way radio that scans. Because its designed for
the commercial market it has a better receiver.
I have had no Intermod, cross channel interference
or any other problems found when using a scanner.

The radio is shorter and not as wide as, lets say,
a bearcat760. It has a alpha numeric display 8
characters wide that you can program it to say
anything you want. For example&#65533; "Fire F1" or "AMB TRU"
etc. It has 32 systems with 256 groups, or if you
like&#65533; 32 banks of 256 channels. The only problem is
that you can only scan 32 channels at a time. Its
very fast and crystal clear.

This radio is programmed via a serial cable connected
to the mic jack and to a PC with simple software.

I&#65533;ve had, and used, a 2004,2006 bc760, pro-43,
Standard radio, Motorola MTX 8000, Motorola Radius
and a bc2500xlt and this one beats them all.

The thing I like about this the most is that its
easy to use, I can lock out channels easily, program
anything I want into it and select it anytime I want
just like a scanner except with out the problems
of a scanner.

I never thought Kenwood made good two way radios
(ham radios) but I&#65533;ve changed my mind. I like
it so much I showed it to a local ham radio store
and they decided to start selling it.

Any one else have one of these radios?

How about a service manuel? I&#65533;d like to do a mod
it if I can find a mute or squelch pin.

>scans in smaller increments??

I went back to RS and checked the specs on the 25 and the 51. Both
have Hyperscan and search as well as scan at the same rate. The only
difference in the two is the number of channels. I exchanged the 25
for a 51, it was only $20 more. Now I have 200 channels :)

I had the same problem with my AR1000. I was unsatisfied
with the recharging. I bought a 12v 500ma charger, it
worked. But in the car I used a charger with too much
ma's. It wouldn't charge after that. That was about 6
yrs ago and I still haven't gotten it fixed. Instead I
purchased an extra set of nicads and a dedicated good
quality batt charger. Then just switch the nicads as
needed. If I leave my residense, I have a pkg. of alkaline batt. as back-up.

Yes.
Radio shack sells through its new mail-order a descrambler.(in kit
form). You'll find other ads in various comm. magazines. I have an
older descrambler
that still works but its starting to conk out.
I can also confirm that my AR8000 can make scrambled
calls understandable when I'm in USB/LSB mode.

From: mulligan@ACM.ORG
Message-ID: <4l504l$7nf@HOPPER.ACM.ORG>
Source record: 235854

In the U.S., 452.630 is not a valid transmitter frequency. In this
range the steps are 12.5 kHz, i.e. 452.625 and 452.6375 MHz are the
nearest authorized channels. The PRO-43 will only accept the valid freqs.
That being said, you should still be able to hear an NFM signal when
tuned 5 kHz off.

Nothing above but by adding a small surface mount diode to a vacant position
(D2 - you need both D2 & D3 in place to have 30-88) on the lower logic board
you can have 30-88MHz. (Assuming you have a PRO-43 from oustide USA/Canada).

Bill:

Thanks for the suggestion; however, it is clearly not an overload situation. Such a situation would vary depending upon the intensity of the signal(s) reaching the front end and intermodulation products that are developed, as a result. The scanner simply has extremely poor sensitivity. Let's face it though, any receiver that is designed to operate over such a large range of frequencies cannot possibly have much selectivity or gain..I guess some are better than others.

This whole thread leaves me with 2 questions:
1. What is FIDONet and why is a dog running a network?
2. If Bill Cheek were going to use this group as a forum to advance his book sales, he would showcase his intelligence, knowledge of the subject matter, and command of the english language in his posts to the group. How can anyone honestly claim that he is advertising given the post that follows?

>> Mr. Cheek, in all honestly, I am somewhat new here, but your attitude
>> is extreamly abusive and self-centered.

>Thank you for your carefully considered opinion.

Well beanbrain (that seems to be one of your favorite phrases), I did
call my lawyer and he says that you can copyright anything you want,
but unless it states specifically that you cannot copy, alter etc. in any
way without the authors permission, then you are free to use it in
any way, for any purpose without the authors permission, you
just cannot take credit for the work!

But anyhow, you just changed my mind about you too! I go along with everyone
else...

Remember Mr Cheek, Ignorance and Arrogance go hand in hand!
Direct any further nonsense you may come up with (including press
releases for your books) to private e-mail in the future!

My source also indicates that it's sooner than you think.
If it is indeed an EDACS system, you can kiss your dreams of scanning
conversations bye-bye. The most you'll get are parts of conversations
and if the PD and County guys decide to use the AEGIS radios, then
you can forget it completely.

Of course, there might be some folks who know the EDACS protocol and could
program a scanner/PC combination to follow LID's during calls. ;-)

> ^^^^^ request...no "s"

That's correct - one request. My error. I may have been thinking
of my previous posting in which I broadcast a plea for advice and
to which Mr. Clough responded via email, but that doesn't count.

>I'll assume though you bought it elswehere (ie not us)

I did buy it elsewhere, and I was derelict in not making that
clear in my original message, so let me stress it here: I did not
buy my radio from Javiation and Mr. Clough is not obliged to me in
any way or manner. If my message somehow implied that he *does*
have an obligation to me which he is not fulfilling, then I have
done him wrong. My intention in naming Jonathan Clough was merely
to mention someone who appears to be recognized in this newsgroup
as an authority regarding Yupiteru radios. By mentioning his
silence in response to my inquiries regarding repair strategies,
I was giving what I thought to be a good reason to believe that
there WERE none i.e. if Jonathan Clough doesn't know how to
arrange it then it likely *can't* be arranged. (perhaps a bit
overstated, but it makes the point) I used the term "embarrassed"
only in the sense that fans of these radios might be collectively
embarrassed about this one glaring drawback to owning what is
otherwise a fine scanner.

>I did receive your E-Mail on the 9th April following my reply to your

I hate to jump into this thread since it repeats itself every 4-6 months,
but...
I was reading in Delta's Sky magazine where they print the regulations
and it states that VHF scanners can be used during flight (not takeoff or
landing).

On a side note, I bet many games and computers "transmit" more noise than
a decent LO in a radio ;)

> JM(VA3 OCH)

Back in the "good old days" there was more genuine use for Morse,
IE it had considerable advantages over other methods then in use.
Those advantages have dwindled dramatically in the last few years
to the point where the disadvantages of the mode outweigh its
advantages.

But the lack of time argument you advance rings rather hollow. If you
expect to have the time to *operate* HF over the course of your lifetime,
surely you can find a bit of time *once* to program the wetware to pass
the Morse test in order to do so. Sure, you may think it is hazing, sure
you may consider it a waste of time, and you arguably could be right,
but you can start to forget it the instant you pass your test, and the
brain damage need not be permanent. You must weigh the time wasted
against the time you'll spend operating on HF over the course of your
lifetime. I'd suggest the scale will not balance, but will overwelmingly
favor going ahead and getting the HF license.

There are rational reasons which can be advanced to show that Morse
speed testing is no longer a useful licensing requirement. But lack
of time isn't a good one. If your time is really that short, then
you won't have time to *operate* HF either, so the point is moot.

Gary

[snip]

>Even so, local laws may make it illegal, while the state says it's OK.
>Good luck.

EXCEPT that by federal (FCC) edict, no state or local law may make
it illegal for a licensed amateur radio operator to use (mobile/portable
or whatever) a radio for the amateur bands that may also cover the
public service, etc. "scanner" frequencies.
Quite a few "mobile" type 2 meter and 440 MHz amateur radios offer
extended coverage and local/state laws can't make them illegal to use.

The ultimate extension of that is my Icom IC2SRA handheld, with is
both a 2 meter radio and a full 25 Mhz-960 MHz scanner. Unfortunately,
Icom doesn't make this scanner anymore (it also covers the full,
evil cellular phone band), but I have two. I may sell *one* sometime,
but I'll "never" (except in the MOST dire circumstances) sell my
last IC2SRA! It's my anti-scanner law radio, one I can take and scan with
legally everywhere in the USA.

Delta Airlines doesn't prohibit scanners. I flew Delta Airlines a
couple of weeks ago, and in their in-flight magazine it specifically
states that UHF/VHF scanners are allowed during flight (not during
take-off or landing).

I sat next to the window and had an interesting time listening
to my scanner during the flight(s). I may even write about it for
THE EXCITER.

Support their scanner policies! FLY DELTA AIRLINES!

ESPECIALLY now, with the widespread availability of computers (and
Morse code practice programs) and the relaxing of the code requirement.

Code requirement relaxed? Yes, the multiple choice code tests,etc.
now available represent a loosening of the code requirement. I passed
the Novice test in 1968, the General & Advanced in 1970 and Extra in
1995. In the "olden days", you had to have one minute of absolute SOLID
copy... miss one letter, start over. I have to travel approx.
150 miles to take the test, and if I didn't pass on the "first
try", went home with nothing and couldn't take the test again for a
month (like I could travel the 150 miles or more immediately the
next month, especially since I was 15 years old when I passed
General). This is pressure!

For Novice practice, I had no suitable receiver and no cassette
player (I got my first cassette recorder/player in 1969 and it
cost $100 then, approx. $400 of today's dollarettes). Today, my
computer can give me limitless random practice and limitless
"practice tests".

You can take the test 3 times in one sitting, usually close to where
you live. I passed the 20 wpm(?) test at a regular meeting of the local
Raleigh Amateur Radio Society. If you fail, often the test will given
somewhere else close by within a week or so (and I say this as a resident
of a medium sized "city" in a relatively rural state).

With the multiple choice test, you don't even have to copy the required
item perfectly to correctly answer the question.

e.g.
==========
You copy "N-me is Ric--rd"

QUESTION:
"The operator's name was:

a) Ronald b) Timothy c) Richard d) Ricardo e) Anthony
==========

If you don't copy ANYTHING you have a 20% chance of getting it right.
Pretty tough, huh?

I passed the 20 wpm exam on my first sitting and scored 100% on
the test (I absolutely, positively and totally lucked out on one
question). Realistically, I'd say my real code speed proficiency
(measured the "old" way) was more like 15 wpm.

So it's never been easier than it is now, even for the "higher"
license classes.

Has Uniden or a third party vendor developed an alternate battery pack for the 3000xlt that allows the use of regular alkaline batteries (or other nicads perhaps)? Since the 2500 and 3000 use the same pack I figure someone would have come up with an alternate by now.

> I wonder why there is this push to move all the police and fire to 800 >MHz. We keep reading in this newsgroup about how the systems are not >that reliable, keep having problems once you leave the street, etc.

So Motorola, Ericsson, Johnson, etc, can make more money. It's supposed to be for better spectral efficiency, and certainly in some cases that's true, and also to allieve the crowded frequency conditions in certain areas, and in some cases that's true.

But why does a 20-pair trunked system have to cost millions and millions of dollars (almost seven million dollars for the local one here, and they only are using 13 pairs of the 20 licensed, and most of the police cars do not have new mobiles installed.). Compare it to the cost of putting up 20 new conventional repeaters and all new mobile and portable radios, and the trunked systems cost many times more than a brand new conventional system with the same capacity would cost. The manufacturers do have to pay for their R&D outlay, and they certainly have to pay for the technicians to come out and fix the system until the warranty expires, and the trunked systems do have some nice bells and whistles, but is it worth the taxpayers expenditure of 3-10 times the cost of a conventional system?

I'll step off my soapbox now...

I just tried it on mine.

holding down Fire || Weather || Police || Highway when turning on keeps the
alarm silent.

it returns to normal noisy conditions when you dont press anything next
time you turn it on.

I thought Ham Radio was going to be fun! Was I wrong!!!
The local repeters here have the "same hams" on there
every morning "hogging" the machine. They won't let you
get a word in if you wanted to. Some times I fill like
getting the ticket was a waste. Ham radio reminds me
of the CB "childrens band" back in the 1970's. The only
thing missing is the "good buddy" language, everything
else is the same.

My 2 cents KD4PON

I also meant to say if R82 has gone (which will be obvious) and you have difficulty finding a replacement or just want one direct we have them here. When you dissasemble the unit you will need to remove the three rotary knobs on the top and the locking nuts on each dial as you need to remove the board that these are attached to get to R82. Let me know if you need more details.

I know it is a short binary, but please, do not make a habit of
it. It causes problems. Someone will see it and post 5Mb of
control software and us dial up users will curse them... :-)

These are the frequencies for SFO and SJC:

SFO SJC

Tower 120.50 124.00
269.10 120.70
257.60

Ground 121.80 121.70
124.25

Clearance 118.20 118.00

Approach 135.65 120.10
134.50 135.20
135.40 121.30
127.00
133.95

Departure 120.90 120.10
135.10 121.30

1558. AR8000, narrow AM filter mod

Newsgroup: rec.radio.scanner
Date: 1996-04-19 00:00:00 UTC
From: klimasewski@fccvde.enet.dec.com
Message-ID: <4l7u55$lpm@mrnews.mro.dec.com>
Source record: 235698

I have designed a switching scheme that allows the user to select
the stock 12KHz AM filter or the narrow SSB 4.0KHz while still in
the AM mode. I have found this to make a BIG difference when trying
to receive a weak shortwave station next to a very strong one.
The only part required is a switch and some wire.
My mod has no effect on the use of the DS8000 speech inversion accessory.

Send me email if interested.

Ken
klimasewski@fccvde.enet.dec.com

+>the Morse test in order to do so. Sure, you may think it is hazing, sure
+
+ ESPECIALLY now, with the widespread availability of computers (and
+Morse code practice programs) and the relaxing of the code requirement.
+
+ Code requirement relaxed? Yes, the multiple choice code tests,etc.
+now available represent a loosening of the code requirement. I passed
+the Novice test in 1968, the General & Advanced in 1970 and Extra in
+1995. In the "olden days", you had to have one minute of absolute SOLID
+copy... miss one letter, start over. I have to travel approx.
+150 miles to take the test, and if I didn't pass on the "first
+try", went home with nothing and couldn't take the test again for a
+month (like I could travel the 150 miles or more immediately the
+next month, especially since I was 15 years old when I passed
+General). This is pressure!
+
+ For Novice practice, I had no suitable receiver and no cassette
+player (I got my first cassette recorder/player in 1969 and it
+cost $100 then, approx. $400 of today's dollarettes). Today, my
+computer can give me limitless random practice and limitless
+"practice tests".
+
+ You can take the test 3 times in one sitting, usually close to where
+you live. I passed the 20 wpm(?) test at a regular meeting of the local
+Raleigh Amateur Radio Society. If you fail, often the test will given
+somewhere else close by within a week or so (and I say this as a resident
+of a medium sized "city" in a relatively rural state).
+
+ With the multiple choice test, you don't even have to copy the required
+*item* perfectly to correctly answer the question.
+
+e.g.
+==========

+ You copy "N-me is Ric--rd"
+
+QUESTION:
+ "The operator's name was:
+
+a) Ronald b) Timothy c) Richard d) Ricardo e) Anthony
+==
+
+If you don't copy ANYTHING you have a 20% chance of getting it right.
+Pretty tough, huh?
+
+ I passed the 20 wpm exam on my first sitting and scored 100% on
+the test (I absolutely, positively and totally lucked out on one
+question). Realistically, I'd say my real code speed proficiency
+(measured the "old" way) was more like 15 wpm.
+
+ So it's never been easier than it is now, even for the "higher"
+license classes.
+

+==cphillips@interpath.com ==

All this stuff may be interesting to someone, but it is NOT
part of rec.antiques.radio+phono, which specifically excludes ham
radio. Unless, of course, we are treating the Morse code as
antique, no longer in production, thus an object of collection as
a remembrance of things past. It may be, the FCC still thinks
that we need to maintain the skills of running spark gap
transmitters.

By the way, didn't you have to travel that 150 miles
barefoot, in the snow, and with no food?

Now that was pressure.

Personally I found the CW portion of the test Pavlovian and a waste of
time the only greater waste is the half of the HF bands devoted to a
dying mode. If the band plans were to reflect actual use it would be
more like 80/20.

You hear a lot about how nice folks are on the CW portions of the
bands. My question is "What happens to these nice folks when they get
on the internet?" If anyone suggests CW is a waste of time for those
not interested in it they are accused of being lazy something for
nothing welfare types. I fully expect such accusations to be directed
at me for this post.

When I first renewed my interest in ham radio it was some 35 years after my first exposure. I got started via the no code route with a great deal of interest in learning code and using it in the hobby. The fine pro code folks here on the net have taught me the error of my ways. One particular incident stands out. Some twit named Steve from the Northeast along with his Toady from Ohio were being particularly hateful to one of the anti code people and describing it as his Christmas present. I objected and this asshole Steve tried to threaten my job. Sure make me want to jump on his band wagon.

Let this nonsense about how tough it was in the good/bad old days go we all took the tests that were in place when we decided to get our licenses and everyone new or old should be treated as a brother in the hobby. Locally this is mostly how it is and I am glad because if it was not I would not have taken the interest to get licensed upgrade and I would have missed a lot of good friends.

Thanks I feel better now. 73 de Jerry

154.695 is used by PSP Reading and some other barracks with base
and mobile heard only on this frequency. I dont have my records with me
right now, but I have been recording my findings of frequency use by
barracks across the state. I have many of the eastern and cntral Pa
barracks, but no western barracks. I will post this list next week some time.

I am selling my last Bravo pager programmer. This portable unit operates on 6 "AA" batteries for easy field programming.

Cost new = $350.00

Sell for = $225.00

This will program capcodes & options in Bravo only. (Will not program Bravo+, Express, etc.)

Mint condition w/ manuals.

Charles Curtis <ccurtis@nsni.net> wrote:
>I am looking for any unusual designs that work well.
>I usually build my own rather that buying them.
>Any ideas would be welcome. Thanks!!!!

Hi Charles,

Here's a design that works well for me on UHF, I'm now building one for 800 Mhz to see if it works there. It's a triple folded dipole with a quarter-wave matching transformer. The cost is around $12 for materials.

Materials - white PVC pipe, T and L fittings, a dozen feet or so of a good grade of 300 ohm twinline, a small length of 75-ohm coax, five-minute expoxy, bare copper 25-amp electrical wire

Construction - Build an E-shaped bracket out of PVC tubing. The three prongs of the E should be one wavelength apart (use the formula for wavelength in free space - no adjustment). Lenght of the prongs is roughly 4-6"; all three prongs should be the same length.

Cut three lengths of copper wire, one wavelenght long plus 1/8" on each end (Remember to adjust the length for the appropriate K value) Bend the wire into ovals with the ends in the middle of one side. The two long sides of the oval should be about an inch apart. Bend the ends so that there is about 1/8" of wire sticking out horizontally at each end. The gap between the ends should be about 1/4".

Cut three IDENTICAL sized pieces of 300-ohm twinline. Length is not critical so long as the three pieces are EXACTLY the same length. The correct length is whatever is long enough to bring all three ends together with a small amount of slack.. Solder these lengths to the three wire loops.

Cut two 1/2" slots (top and bottom) in the end of each prong of the pipe. Cut/drill a hole in the T/L fitting at the other end of the prong (so you can look in the end of the prong and see out the back of the joint)

Feed the free end of each section of twinline into the end of the each prong, and back out the hole at the back.Keep feeding until you can insert the antenna loop into the slot. Mix and apply epoxy to secure the loop in the slot (better to do in small batches and build up slowly, than to try to do it all in one application).

Solder the three leads together in parallel (make sure you have joined the three top wires of the loops together, and the three bottom wires

together, so the three are 'in phase')

Cut a quarter-wave length of 75-ohm coax (remember to adjust for velocity factor) and solder one end to the three joined twinline leads. Solder the other end to a standard PL-259 plug or directly to a length of 50-ohm coax feedline.
(Some booksstate that the quarter-wave section should have connectors at the ends. For a receiving antenna I have found it's OK to do without. Solder the centre connectors carefully, cover with a small coating of expoxy, then fold the braid back in place, solder that, and cover over.)

When soldering, hold the conductor with needle-nose pliers as a heat sink to protect the insulation from excess heat.

This antenna is light, compact, easy to mount, and has a good omnidirectional pattern. It outperforms several models of ground-plane I have tried.

I'd appreciate any comments or constructive suggestions on this design.

1571. Re: LAPD Moving to 800MHz next?

Newsgroup: rec.radio.scanner
Date: 1996-04-19 00:00:00 UTC
From: cyamamot@kilroy.jpl.nasa.gov
Message-ID: <4l8akd$mhg@netline-fddi.jpl.nasa.gov>
Source record: 235711

Ok, I've been watching by the sidelines and perhaps it was my fault for
suggesting to one of the earlier posters that the new 800 system was
not for LAPD. I guess it depends on your definition of certain services.

Mike Carter <pyro@primenet.com> wrote:
>Brent Corbin <corbin@physics.ucla.edu> wrote:
>: Given the amount of time,
>: energy and money being pumped into the new ASTRO system, I'd be REAL
>
>Ny source indicates it's not a Motorolla system, it's a G.E. EDACS system.

Mike is correct... it is the EDACS system.

>: suprised if LAPD had any near-future plans to move to 800MHz. I'd be
>: a lot less suprised if they do like LA County did and move about
>: everything except public safety to 800 MHz.

Brent is also correct. LAPD will not be moving any *voice* operations
to 800 MHz. Now Brian H. hinted there might be LAPD data (MDT?) on
800 eventually, but it remains to be seen how fast that'll happen.

>My source also indicates that it's sooner than you think.
>If it is indeed an EDACS system, you can kiss your dreams of scanning
>conversations bye-bye.

The EDACS system is installed and is still going thru it's growing pains.
The only city service using it at the moment is Parking Enforcement and
that's about it. The system installation was contracted out and is really
not part of the same dept that handles the regular comms for the city.

>The most you'll get are parts of conversations
>and if the PD and County guys decide to use the AEGIS radios, then
>you can forget it completely.

At least the Sheriff's dept won't leaving UHF until well past the turn
of the century.

>Of course, there might be some folks who know the EDACS protocol and could
>program a scanner/PC combination to follow LID's during calls. ;-)

I guess there are different interpretations of what services are part
of LAPD. I suppose Parking Enforcement could be one of them, but at
first I didn't think so. That's why I've been saying 800 is not for
LAPD (unless you include data comms).

In any event, there are many things on the to-do list for LAPD themselves
(like starting to use new frequencies, getting off of MODAT, selecting a
mobile radio, etc.) that need to be done before worrying about the 800.

Simple. The manufacturers and salesmen make a lot of money selling new
radios. Too bad the safety of the users and the public is not an issue.

Certainly can understand THAT! <G>

> What about grounding it? I noticed my 3 foot magnetic antenna (Hustler)
> works okay in my apartment but *terrific* when placed on my car. Should I
> somehow take advantage of a cold water pipe with the discone?

I used the same setup in my apartment; I use the cheap $15 discone
indoors and the stainless expensive RS discone on the deck (upstairs, so
it's easier to do this). I have experimented with grounding to various
items (cold water pipes, outlet earth ground) and have not found any real
difference in signal (even worse in some cases) But the cheaper discone
is a great buy and you will notice the difference.

At these frequencies attenuation in a coax start to become
unacceptable. Most signals that are sent at these frequencies are from
one dish to another dish and are converted from a lower frequency at
the feed horn (to avoid losses). I wouldn't expect to find much
interesting stuff in this range that we could receive.

1578. Re: Code requirement relaxed WAS: Selling out of ham radio

Newsgroup: rec.radio.scanner
Date: 1996-04-19 00:00:00 UTC
From: Jim <jstrohm@texas.net>
Message-ID: <4l8ejs$18c0@newsgate.sps.mot.com>
Source record: 235718
Cross-posted to: rec.radio.swap,rec.radio.amateur.misc,rec.radio.scanner,sci.electronics.design

I look at the Morse code requirement this way:

It forms an arbitrary elitist requirement that bans certain individuals from practically all of HF. It limits the inept and the poorly motivated to undesirable sectors of the amateur bands (like 75 phone). For the skilled, the dedicated, and the motivated, it rewards us with uncrowded band sectors populated by gentlemen who've earned the privilege.

I think incentive licensing and the code requirement are terrific. Wouldn't have it any other way. (And you only have to demonstrate proficiency one time at each speed, remember.)

I also think that the volunteer examination program puts the ability to attain the better HF operating privileges within the reach of everyone. I won't speak poorly of any no-coder, except to question their motivation -- I learned code without a computer, without a practice key, and without an HF receiver. And I came up from CB like a lot of newer (newer than QCWA-eligible, at least) hams.

Jim N6OTQ

P.S. If you can sound out the letters of a street sign in Morse code in your head, you can pass the 5 WPM test. If you can walk, if you can drive, if you can read a headline on a newspaper (if you can read THIS), you can practice code any time.

Yes, the rules do differ. I just flew United from Denver to Cleveland yesterday, it definitely says in the inflight mag that you cannot use AM/FM radios during flight, and that's exactly what a scanner is.

Now, I took a Delta flight last year (Cleveland to Denver), and scanners WERE OK to use. I had a ball too.

So yes, it depends on the airline.

Mike

I hate to tell you, but in the era of cell phones and internet communication, HF itself is outdated. It's sure a lot of fun, though.

Since HF communication is obsolete, I see no reason why we shouldn't also keep an obsolete requirement (i.e. morse code) for entry into the brother/sisterhood.

Our society is sadly lacking in "Rites of Passage." Everyone expects things to be given to them without expending any effort. Societies that require citizens to demonstrate skill or valor before privileges are granted seem to be stronger.

Perhaps we should instigate a morse code requirement for hunting, fishing and driving licenses too!

Todd,

The NJSP troop E (Parkway) use at least one subfleet on each trunked system. The trunked frequencies are listed in police call and unfortunately with a conventional scanner, you have to
program all of them in. The frequencies you listed above are for maintenance, toll plaza, and
secondary police communication. The communications heard on the old VHF channels are on the 800
mhz trunked system. I am not sure if the NJSP still use these channels for secondary use since I
am too far from the shore area to receive the comms. Also, the trunked system has several car-to-car and talkaround modes to use.

Optoelectronics has a unit that does DPL as well as CTCSS and DTMF. They are in Florida and is at www.optoelectronics.com. The unit is the DC-440. However, to receive DPL and most CTCSS
tones, you must have a modification done to your radio to tap into the discriminator output.

YEAH, NO PROBLEM!

However, I won't be the source of the information, because I hate the thought that it will get you many years in Federal Prison.

The FCC puts this notion on the same level as murder, rape, etc. :-) Well, I exagerate some, but its a bad trip. Their new DF, signature, and monitoring equipment coming out soon will make it open-and-shut. I know, I wrote some of the technical reference manuals.

I'd suggest you leave this path unwalked, and enjoy scanning as a RECEIVE ONLY hobby.

>>player (I got my first cassette recorder/player in 1969tmoded mode
but even when we do accomplish it we
>have to be derided because it ain't like it was.

Your first line got a little garbled, but *I* WASN'T deriding ANYONE.
I wasn't lambasting people with a no-code license. I wasn't saying
code is great. I was simply telling about the way it was, not so
long ago, as compared to the way it is now. The fact is that I got
Novice/General/Advanced under one set of rules, and Extra under another.
If I was deriding people licensed under the new testing system, then
I'd be deriding myself for getting an "easy" Extra. The fact is that
I followed the current rules of the FCC each time I tested, which is
all I or anyone can be expected to do.

IMO, the major problem with the way they test today is providing a
list of all of the questions, not the CW portion. Still, I don't
deride or degrade anyone who tested under these rules (as *I* did).
I simply think that the FCC is making a mistake.

To me, the history of the hobby is a part of its charm. We have a
93 year old ham in RARS, and I enjoy hearing him talk about the
REALLY old days. In fact, we have a LOT of hams with decades of
experience in RARS, and I think it is important for us to know
"where we came from", so to speak.

>Personally I found the CW portion of the test Pavlovian and a waste of
>time the only greater waste is the half of the HF bands devoted to a

Perhaps, but the CW portion of amateur radio testing is FAR from the
only "waste of time" I am forced to engage in nowadays, and hardly the
most egregious either. However, I encourage anyone who really hates it
to let the FCC (and ARRL and whomever) know how you feel. I'm not a
big CW fan, but I don't find it all that onerous either.

[snip]
>on the internet?" If anyone suggests CW is a waste of time for those
>not interested in it they are accused of being lazy something for
>nothing welfare types. I fully expect such accusations to be directed

>at me for this post.

Then you have to consider the source. When the no-code license was
being considered, I wrote a very unbiased article about it in my
column in MODERN ELECTRONICS magazine. In essence, all I said was that
the FCC was thinking about doing this, and you should know about it
and write them if you care about it. I didn't advocate it, or say
that people should be against it. I simply reported on it.
I got hate mail (and e-mail) for writing even that. But it didn't
really bother me. THEY were the ones who were upset, not me. Therefore,
it was only a problem to them, not to me.

>Let this nonsense about how tough it was in the good/bad old days go we

I don't think the history of the hobby is nonsense.

>all took the tests that were in place when we decided to get our
>licenses and everyone new or old should be treated as a brother in the
>hobby. Locally this is mostly how it is and I am glad because if it was

I agree and try to help our new licensees, and even taught a class
for prospective Novice/Tech (even, gasp, NO CODE Techs) as recently as
two weeks ago.

So I didn't mean my posting as negative toward new licensees, and if
you'll read it carefully you'll see that there is nothing in it that
would be taken that way by a reasonable person. I was just relating a
little history.

Sorry if you took it the wrong way.

> My 2 cents KD4PON

I agree. I still have my Radios but they collect dust. There are to many folks out there that have no respect. Its CB radio made over again and it isn't going to get any better. I will keep my ticket for as long as I remember to renew it but I won't be talking on it much.

All they talk about around here is

1. What kind of radio they have, want, dream of having
2. What kind of radio they have had.
3. What they are going to have in the future (dreams).
4. How good they are getting into the repeater.
5. Where is the repeater located.
6. And last but not least THE WEATHER!

I havent talked on 2 meters in a year or so because the same people are on the same repeater at the same time every night talking about the same shit.
What ever happend to good old SIMPLEX.

No need to flame the shit out of me.....I just stating my oppinion!
Those of you wanting to get into Ham radio.....It is fun and you learn alot. All I'm saying is Dont get your license just to get away from the CB.....because all the other CB'ers are too!

Before getting too disgusted, try the HF bands. Still a lot of banter
on 75 SSB, but the challenge of DX'ing/Contesting and digital modes keep
the hobby interesting!

Has anyone tried the $65 amplifier that Radio Shack sells to put between your antenna and handheld? I was wondering how well they work. The guy at the store said "Well, I never ordered one, but I'm sure it works good." Yeah, and I'm sure that commission would work good in your wallet. Anyway, what I was wondering was, will it amplify just the signal or also the noise and interference (this is probably the case). Thanks for any replies!!

Hi Scott,

October 1985 Ham Radio featured an up converter that converted .1-60 MHz to 100.1-160 MHz. I believe the author mounted it external but the radio already has a knockout for a 2nd SO239 in the back and the converter card I built (PC board) plugged directly into one of the vacant extension slots inside the radio. I used a spare hole in the rear to switch from HF to VHF. The radio makes a fine SW receiver.

Heh! Heh! Heh! Give em hell, Bud!

It never ceases to amaze me how assinine some people can be. They don't bother to read either the rules of the echo or of the net in general and then they get their shorts in knot when it comes back and bites them in the backside. Then... On top of it all they schlepp over to the NewGroups in another net and piss and moan that they were `wronged' for their own stupidity. (And on top of it get `upset?' when the person they are bad mouthing comes in and gives it back to them in spades!)

Yeah! They should just shut the fuck up and crawl back into their warm wombs! The *real?* world is a cold, violent, nasty, vulgar, and generally not so nice place. {CHORTLE!} Maybe? It might help? If they were to take and start chanting, "It's only a hobby. It's only a hobby." Nah! They wouldn't know where to begin.

Doleo ergo sum,
-HALFPINT-

Source record: 235780

When I bought my AOR100 in Australia (From Dick Smith Elect.) It was supplied with a POWERMASTER Plugpack rated at 12vDC 150mA. It is a low voltage adapter and was designed specifically for the AR1500 and AR1000 Scanners. I have found it to be extremly good as it charges at a decent rate even when the scanner is turned on. Maximum recharge time while it is turned on is probably around 12-14 hrs and only about 9 hrs when off. I dont know if you can get these outside Australia, but it is worth a try.

1614. REQ:San Jose Airport Freqs

Newsgroup: rec.radio.scanner
Date: 1996-04-19 00:00:00 UTC
From: trekker1@usa.pipeline.com
Message-ID: <4l7153$mi2@news1.h1.usa.pipeline.com>
Source record: 235781

I would like to request that someone email me the frequencies used by San Jose International Airport. I attend a vocational school that is right around the corner from the airport. I would enjoy being able to monitor the incoming and outgoing flights when I'm driving to school and sitting in my car during lunch. I would like to request the tower,ground control,approach control,and all of the frequencies used by the different airlines that use San Jose International.

I would also like to receive the frequencies used by airport security.

I have forgotten. What is the frequency used for in-flight emergincies and distress calls?

I use a Realistic Pro-34 handheld 200 channel programmable scanner. It can handle the 800-900mhz range.

Thanks in advance!!
Chris Halladay (trekker1@usa.pipeline.com)

>Search the Usenet database or the Web and you'll probably find
>information on this.

Can't speak for cordless but the along with Split Band inversion, you
also have several other carriers used, and Variable Carrier Inversion.

Variable Carrier inversion changes the carrier used based on a timing
sequence.

Other carriers used:

3.107KHz - Norcomm
3.339KHz - MX-COM/Selectone
3.496KHz - Motorola VPA/Selectone
3.729KHZ - Selectone
4.096KHz - Transcrypt
3.023KHz - MX-COM/Selectone
2.868KHz - Selectone
2.729KHz - Transcrypt/Selectone

You may wish to look into getting one the "COMMERCIAL" 2-way radio
encryption boards to better decode, and get more options. Cost
$50-100.

Dude,
I have used the supplied Panasonic wall charger without any
trouble. After 3 years, I noticed that when I charged the batteries,
she woul die in 2-3 hours. Taking the batteries out and measuring
open terminal voltage with my Simpson, I found I had one battery that
had the lowest voltage out of the 4....replacing the bad nicad
verified my find...I then just put in 4 new nicads. The Sanyos are
excellent cells-I typically get 6-7 hours of use time. I am using
the charger stand advertised in Tucker Electronics...retails for
around US $59.99

Yeah, you're probably right. But who is going to determine which radios have a decent LO in them. Could your typical flight attendant determine? Remember they had to make up a rule which they could print in one paragraph, and they need to err on the "safe" side.

I ask anyone who thinks that you've ever contributed anything meaningful
to any newsgroup to step up to the plate and tell us about it. Virtually
every post you make is to attack someone...to insult them...to make
disparaging remarks. The facts speak for themselves. Alta Vista Baby!

Your remarks about PJB's taking medication is by far one of the most mean
spirited, vindictive and vile character assassinations that I have seen
posted here or anywhere else. It speaks far more eloquently about the kind
of person you are than anything I could ever say.

Those of you who want to see the latest price guide, point your browsers to:
www.ultranet.com/~bellvill/radio.html. It's been updated twice in recent
weeks and will be updated again soon. Meanwhile, if you have bought or
sold a used scanner (mint condition) recently, send me the info. You can
find the beta release of my computer-aided scanning FAQ there as well.

I sometimes us a Radio Shack 15-1123 UHF/VHF/FM amplifier as the from end of a PRO-39. It does help suck in some weaker signals, but at time it seems to be overloaded by splatter from a local tower. I also had to modify the connections.

It can be done, but it'll take a little work. Get hold of a recent ARRL handbook where solid-state antenna switches are discussed. Just don't expect the scanner to receive while the cellular is transmitting. There may be better ideas from others, but I KNOW this one will work. Been there, done that. Ain't going back. Two antennas big heap bunch more better.

The noise and interference, mostly.

If you wanna buy one, go ahead, but use a credit card and save the
receipt. Refunds are more easily done on credit cards. Let the guy know
that you'll try it but bring it back if it doesn't work, so he shouldn't
get designs on the commission money. Very likely, IMO, you'll be making
that second trip to take the thing back.

Another solution would be to use a duplexer similar to what
hams sometimes use for dual band radios. (ie, radio has 2 antenna
connections, one for each band - hook these 2 into duplexer, hook
dual-band antenna to third connector on duplexer). The important part
is that you need to get a duplexer that will work at the cellular
phone frequencies. Other than that, this is a similar situation to the
dual band radio case, except your scanner will never transmit (we hope
:-)). You should be able to listen to the scanner at the same time
as talking on the phone. I am not sure if duplexers are readily
available for this band, since I have never needed one. Even if they
are available they would probably be kinda expensive. So unless you
have some sort of a luxury or classic car that you don't wish to add
antennas to, I would probably agree with the first response... get
another antenna. Besides, the phone antenna would probably really
start to suck at lower freequencies.

=====
Actually, the amplifier will amplify *everything* that's input to it; signal,
noise, interference, the works.
That's why the amp should be placed as close to the antenna as possible, *not*
at the receiver.
Done that way, the amp will amplify what the antenna picks up (signal, noise
and all), bit not any noise or interference that enters from the cable run.
Done right like this, it will raise the signal level quite a bit over noise
from the cable itself.
Of course, if there isn't much need of amplification, the amplification
can do much more harm than good. Desensitizing the front end from an
overload of signal won't help at all.
Often, you can get better results from installing a better antenna and cable.
Hope this helps.

NO mod necesary. Simply depress the E(nter) button a second time and
you will enter the frequency again. I consider this a great feature of
the 200XLT and some other Uniden scanners. I really like the
notification that I'm entering a duplicate frequency and am told where
the other appearance is. I would NOT consider it a great option without
the ability to enter multiple times. If you have the manual, this
operation is explained in there as well.

: has anyone else had similar problems??

Yes, it is imaging. I found FM stations around 80Mhz on mine. There's really not much you can do about this. Most of the time, you get the "image" where there is no signal on the frequency you are tuned to (i.e. 45Mhz). This is just something that almost all scanners do. If the FM station is interfering with other signals you are listening to, you probably are quite close to the FM station and need to move further away.

Probably not smoke and fire. At the very least the scanner will be horribly overloaded and will not work properly. Good chance of damaging some components in the scanner. Not only this, the phone surely won't work right, and might be damaged. Don't do this, just get separate antennas.

Talking on the cell phone with the scanner nearby will probably make the scanner do weird things, although damaging the scanner will be very unlikely. It's probably not good, however, to use the two when they are very close together.

I dunno, can one become a priest without studying latin? After
all the parishioners can be considered swl's, they are there to hear
the message. Just a thought....

>What does this have to do with rec.radio.scanner mental boy?

Here is another perfect example of a great posting - short, to-the-point, no waste of bandwidth here - unfortunately, it is about as intelligent as asparagus. If you're going to toss off one-liners, at least put some thought into it, if able.

Between Cheek's pre-occupation with fecal matter, male genitalia, and other peoples' sexual orientation, and Hansen's inability to put together any type of good response, it is getting pretty boring, but it is better than re-runs on the tube.

I enjoyed reading your note. It makes a lot of sense.800 has not moved into my immediate area
yet. Pocono's of Pennsylvania.

My question is you mentioned bells and whisltes, what are they and are they really important to
public safety agencies,

ie, private channels, ability to talk unit to unit privately?

I look forward to your feedback. rich

You can do it the way I did. I joined my local volunteer fire department 18 years ago. Attended
enough fire schools to obtain a degree in fire science (free, paid by the state and my VFco)

Became an officer in the company an was issued a portable radio. Bought my own radio and wwas
authorized by the chief to transmit on local fire, county fire and ambulance and local goverrnment.

You'll enjoy serving your community and get to talk on the radio, so your friends with scanners
can listen to you! Go for it! rich

Hello all.

Thanks to those that got back to me about their experiences with the ARA-2000 antenna.

I'm looking for opinions about some other antennas:

o Super Hi-Q Loop Antenna (from MFJ Enterprises, INC.)
o Super Active Antenna (MFJ)
o Indoor Active Antenna (MFJ)

Or any other Indoor antenna. I'm looking for a decent one to use for my Apt. I do have permission to put something on the roof, but I'm holding off due to the cost of running the coax to the roof.

If you use an indoor antenna I'd like to hear where, how much, and how well it works. I tend to scan anywhere from 500khz to 1.4 Ghz. (I spend most of my listen time around 5.5-17mhz and 118-900mhz (the usual stuff)).

Thanks in advance.

Cheers!!!

it is amazing how many rabid code supporters, who passed the exam
in 1952 and haven't worked CW since, let slip remarks on the airwaves
that indicate that they lack the basic essentials to pass the current
Tech exam. i can't take credit for the idea if CW is so important, ALL
hams must be recertified every 5 years to show current competance.

despite about 30 years experience in hardware and software, including
rf design, the code requirement kept me out of the hobby. i am currently
working at the 13 wpm test, so i can employ more efficient digital techniques
on HF, and resenting every minute of it.

{BSE GRIN!} The *best?* term, and the one *I* have come to use, is "Wall Wart". And... Yep! If one is going to try and run an AR-1000 *and* try and charge the batteries at the same time getting a 500ma 12Vdc supply is about the best way to go. (Actually I was `lucky?' in that mine arrived with a 12Vdc 750ma "Wall Wart" and I didn't have to go out and purchase a new one. And... I'm still using the original batteries to boot!)

Most of the Fast Food chains use the following PL tones:

Outside Inside

77.0 162.2
88.5 123.0
100.0 131.8
162.2
107.2 141.3
114.8 107.2
114.8 127.3
156.7
162.2 173.8
114.8 127.3

Here's a list of Fast Food Frequencies that was merged from several
other lists:

Good luck with the test. An old friend of mine was similarly experienced in radio and enjoyed the hobby but found a mental block when it came to Morse code. Unfortunately, he passed away at Easter.

For myself, I don't seem to have the time to spend, work has filled too many evenings in the last few years. Anyway, for what it is worth, to those who have ever made comments along the lines of "we're better than you because we have a full licence" (I was on the receiving end of some such comments when a UK "A" licence holder told me, a "B" (=VHF only) how great cross-band working was... he was using 10m and 2m... little did he know I used 2m and 70cm for years before that :-).....

The standard of Morse code (as someone who intended to be a Merchant Navy Radio Officer, and during our course had to maintain 20wpm UP) was so awful that I never wanted to be tarred with that brush, and thus happily remained above HF with various other interests.

I remain, a happy SWL, but you'll _never_ find me working on HF bands.
73, Peter.

>6. And last but not least THE WEATHER!

Here in the Denver area, I've noticed the same thing. There is one repeater frequency where I'm expecting C.W. McAll to come up any second with a "Good Buddy" message. It seems to be a bunch of truck drivers complaining because someone in a more expensive truck than theirs cut'em off. I have MUCH more intelligent conversations with my 7-year-old daughter every day.

On the other hand, there are other freqs I've found where the "ragchew" is much fun to listen to and participate in. Being a computer, GPS, and flying nerd, I've participated in a number of great sessions with people with much more knowledge than me in these areas. I learn a lot from talking with these people.

I have no desire to learn Morse Code, and that will keep me from upgrading my license, even though I would like to. I learned Morse Code 24 years ago when I was going through navigator training in the Air Force, and promptly forgot it when I no longer had to use Consolan to find my way to San Francisco :).

I'm a new hamster (God, is that politically incorrect on this newsgroup?) and enjoy the hobby, but I get the feeling that there are, um, Luddites that don't like me because I don't know what "dih dah dah dih" means (J, right?).

By the way, I thought Consolan was great, but Inertial Nav Systems made my job as a navigator MUCH easier. Of course, it also made me obsolete :).

Anyway, I guess I'll keep my QSO'ing and QSW'ing and 73'ing at 2 meters and above. I'm sure I'm missing out on a lot, but then, I don't watch much television, either :).

My 2000 xlt shows frequencies where they are not supposed to be.

Obviously its out of alignment, is it a big job to get it realigned ?

Or is there some little thing I can do to fix it.

Many thanks probus

Priority channel can be easily changed with the '37. After
deterining which channel should be set for priority, press
[PROGRAM],[XX],[PRIORITY], where XX is the channel number.

The EL's are no longer available from Tandy Parts. I haven't tried
it, but maybe an EL for another unit (2006 EL might be too small)
might work. It is bad when a part that is known to go bad through
use and degradation is no longer available.

1687. BC700A Cellular Mod

Newsgroup: rec.radio.scanner
Date: 1996-04-20 00:00:00 UTC
From: pkhartley@aol.com
Message-ID: <4lauhh$q44@newsbf02.news.aol.com>
Source record: 235676

The cell mod for this scanner can be found in Monitoring Times, May 1993, Page 94.

The article has step by step disassembly instructions and a diagram to locate the chip resistor to be removed to restore cellular. According to the article, the resistor is marked "472". This resistor is found on the logic board (near the microcontroller IC), located directly behind the front panel. When I performed the mod, though, I could not find this marking "472" and went strictly from the diagram to locate the resistor. So I would definitely recommend ordering a this back issue of monitoring times or checking out a local library to get it.

A person in this newsgroup had faxxed the article to me when I requested it, and I have faxxed it to 2 or 3 others who have requested it. I don't really want to fax it many more times as it gets costly for me and takes time!

If you want to post this article with the diagram, I would suggest getting a copy from MT and permission to post the mod article text and a .bmp of the diagram somewhere (in this newsgroup or an ftp site). I have no optical scanner to scan the diagram myself, and would not want to post it publically without permission from Grove Enterprises, publisher of MT.

Monitor Times can be reached at:

Voice: (704) 837-9200
Fax: (704) 837-2216

I have a modified BC700A I would like to sell. It is in excellent condition, and has been used mostly at home. The following is a copy of my earlier post with detailed info about the scanner:

>For Sale:
>
>Used Uniden BC700A Mobile Scanner
>(Similar to the Radio Shack PRO-2038)
>
>Freq. Coverage
>29-54MHz
>108-174MHz

Brian Gaff <briang@bgserv.demon.co.uk> wrote:
> A Binary so short was OK, though mot encouraged on a non binary group ...

The real kicker is that it wasn't even a binary - it was a simple text file, uuencoded to either inflate its size or hide its true nature. Additionally, it was irrelevant to the original question (which asked about the non-U.S. model), described unsoldering the antenna (which is unnecessary), and gave the wrong frequency for testing.

> ... but I got 6 copies of it here. Better check your software!

Sounds more like someone trying to jam the newsgroup.

1689. AOR AR-3000A Tips and Tricks??

Newsgroup: rec.radio.scanner

1690. Re: Why 800 MHz push?

Newsgroup: rec.radio.scanner
Date: 1996-04-20 00:00:00 UTC
From: NKHP80A@prodigy.com
Message-ID: <4lb1bn$orq@usenetw1.news.prodigy.com>
Source record: 235679

It saddens me at times to be a part of a hobby where so many people are ignorant of the issues.

Are there salespeople who are un-necessarily pushing new radio technology (including 800 MHz and trunking)? Likely so.

Are all moves to 800 MHz wasteful? Hell no!

Please understand that due to a paucity of spectrum, many agencies (such as ours) have been forced to go to 800 MHz.

**Are "800 MHz" and "trunking" synanimous? No, they are not!

The Los Angeles City Fire Department got a bargain when it invested in 800 MHz in 1988. We currently operate a very efficient 24-channel fully repeated conventional (non-trunking) analog (non-digital) 800 MHz radio system. Despite Firestorms, Floods and Earthquakes, the system has performed admirably. Since its inception we have dispatched and controlled more than 2.5 million emergency incidents without any prolonged serious problems.
I credit our good fortune to having well trained technicians AND administrators. It is a sad truth that far too many public safety agencies cut corners on their support staff.

It really ticks me off when unknowing individuals refer to agancies such as ours as being "stupid" or "wasteful" solely as a result of the radio band we were forced to use.

There are radio systems that are worthy of being condemned. Many of those are 800 MHz, and likely use trunking technology.

When critiquing a system, it is appropriate not only to mention the band, but also the presence of trunking technology and the vendor/format.

**A poorly designed, constructed and maintained radio system is as the name implies, REGARDLESS of what portion of the spectrum it uses!

Thank You for allowing me to speak my mind.

Kevin:

If you want a desk-top base unit, the Uniden BC9000-XLT is nice. A good
hand-held unit would be the Uniden BC3000-XLT. They both cost around
$380.00 - $420.00, so shop around!

Price is $400.00 US plus shipping.

The MVT 8000 is 200 channel ac/dc scanner with a mounting bracket for mobile use and comes with a cigarette lighter adapter although it can be hard wired.

It covers 8 Mhz to 1300 Mhz (continuous without blockage) and receives in WFM, NFM and AM. Frequency steps are 5,10,12.5,50 and 100 Khz.

It's got a 10 band search function, pass memory function, and other goodies found in high-end
scanners.

Within 10 years thre will be no more 'ham' radio. The government will make several billion dollars selling the frequencies to Pizza Hut and Radio Shack. No one willl miss it either. Morse code is as dead as Samuel Morse, and requiring it to be learned is keeping millions away from the HF frequencies, so enabeling the destruction of the hobby. Right now, a good listen th 3, 7, 21 Mhz will reveal a bunch of really old men talking about their various physical ailments: whether Preparation H is realy good at relieving Hemmorhoids, prostrate problems, digestive problems (a ham was whining because he was farting too much), gall stones, etc.

Hell, within a decade most of these geriatric cases will be silent keys anyway. Ham radio is NOT an exciting hobby for todays youth, and can no way compete against computers, motorcycles, or fast girls... :)

HAm radio is DEAD unless something radical happens.

Does anyone have a list of frequencies for Florida, or just Orlando, Florida? If so, could you either post them to the group or to me by email. Also if anyone knows of any FTP, WWW sites that might have this particular information, please could you tell me the address?

Living in Britain, I don't have access to any American books such as Police Call, so I am unable to check in any such books, unfortunately. I am trying to get hold of these from someone I know in America, but until them I need some freqs!

Thank-you.

Not as well and especially in a large metro area with plenty of strong signals - takes both - removing the antenna and full squelch. Some squelch circuits may have circuitry that will do the job but on my rig even full squelch allows quite a bit of traffic through.

A similar tip (removing antenna and full squelch) is useful for finding nearby strong signals that you do want to pick up.

> THANKS JFALK

Ms Jayfalk, You are in great danger of being caught scanning police and other secret communications!

The strange noises you hear after each transmission are encrypted tracking codes that are only audible when you have an unauthorized scanner.

Nearby policemen and special plain clothes "enforcers" have special devices that listen for these tracking codes in public places.

If the tracking code detectors hear these tones (through very sensitive microphones), they silently alert the enforcers and display the location of the tone source (i.e. your reciever!) on a concealed screen that looks like a common watch on the enforcers wrist.

What happens next is not pleasant and I will not describe it here, but you can just imagine what people that are trained to maim and kill could do if they are provoked!

I know this is true because a friend of mine knows a girl who dated a guy who's brother picked up the garbage at a secret place called the "scanners dungeon" by the local enforcers and he saw hundreds of men, women and children placed in dark,hot rooms and made to watch CNN 24 hours a day with nothing to eat or drink except diet coke and barbeque flavored potato chips.

I intended to send this message to you on April 1st, but I din't know you were going to ask the question until now.

Remember, if you hear any strange tones IMMEDIATELY turn off your scanner and keep it off until they go away.

And please don't tell anyone I sent this message... you can't trust anyone any more, there's an evil reason for everthing that happens!

I hate to post a reply to my own post, but I want to add a further comment.

When I was in university, I was in ROTC. We had M1 rifles to carry around and clean (I joined the ROTC band, so I want from 9 pound rifle to a 15 pound tuba).

One of the things we learned about cleaning the rifles was that one part (a gas slide chamber or whatever) could not be cleaned unless a non-comissioned officer was present! Why such a silly rule?

The answer was that non-coms were not to be around whenever you cleaned your rifle. As a result you could not always clean this part. And that is what the Army wanted. You see, if it were cleaned all the time, it would get WORN, the gas would leak, and the rifle would lose its re-cocking capability.

This is relevant. Suppose anyone who wanted to could become a ham. The frequency bands are a LIMITED resource. Lots of people become hams, since there is no talent required (as the illogical extension of the argument). Terrible crowding. Then you will have something else to complain about. But there will be no solace for ths, as there is simply no more room to fit hams on the bands.

So you see, it IS possible that some things that are perceived as a an impediment to access actually can have a purpose.

Ron:

Welcome to the world of "hi-tech" scanning. You now know why the Motorola Saber is one of my favorite scanners. I've all but given up on conventional scanners in lieu of commercial units. I have several Sabers in different bands and many other commercial units.

Recently I changed my whole setup. I decided to install a VHF-lo receiver, as well as receivers for VHF-hi (150-162), VHF-hi (163-174), UHF (403-420), UHF (450-470), and an 800 MHz (851-869). I had individual antennas cut for the center of each band split and bingo...I've got the best system I've ever experienced.

I'm now hearing stuff that I never heard before and I've all but eliminated intermod and unwanted interference.

1719. Radios For Sale

1720. Fun with the Wally Warts!

Newsgroup: rec.radio.scanner
Date: 1996-04-21 00:00:00 UTC
From: VUBS79A@prodigy.com
Message-ID: <4ldig5$156k@usenetp1.news.prodigy.com>
Source record: 235549

A few days ago, I came up with a great way to have some fun at one of your favorite neighborhood establishments. No, this doesn't involve reformatting the 'C' drives at your neighborhood Radio Scrap and totally baffling Sammy Salesdroid in the process. Nor does it involve freaking out the drive-thru folks at Mc Burgers by letting them know that you overheard their "private" communications between themselves when they were uttering those off-color remarks about the customers (you, maybe?) Nope. This time, we are going to turn our attention to those good folks at America's #1 retailer...welcome to Wally World!!

I have noticed that most stores use simple Motorola VHF walkie-talkies to communicate amongst themselves. These operate on the interant "dot" frequencies...usually either 151.625, 151.955, 154.570, or 154.600Mhz. After hours of sitting the parking lot and monitoring the comms, I have come to the conclusion that not all Wally Warts have the "privilege" of carrying handhelds. Only the "upper level" types seem to have them. I came to this conclusion after hearing a substantial amount of gossip concerning other employees, as well as customers. Anyway, back to our fun...

First, monitor from the parking lot and determine which frequency is in use at your local Wally World. Then, go into the store and direct yourself to the automotive department. You will see a rack of car stereos mounted against the wall, fully functioning and operative. MOST, but not ALL Wally Worlds also sell lower-end Bearcat scanners, and will have one mounted and operating along with the car stereos. Usually this is the 16-channel mobile model that sells for $89-99. Turn on the scanner. Program the Wally World frequency into channel #1, and lock out all the others. Then, set the squelch, turn the volume up to maximum, and get away quick! Soon, you will hear sounds eminating from the radio. The nearest Wally Wart (usually the clerk behind the sporting goods counter, which is directly adjacent to the automotive department), will get a disgusted look on his face, and proceed over to the display in order to "turn off that damn police scanner." But when he gets close enough to make out the conversation, something very interesting happens: he/she recognizes the voices coming from the speaker! A boss? A co-worker? That girl who works in housewares that he has a big crush on? The light goes off in Wally's head...ding, ding, ding...."hey, these are "our" people!" He will very quickly look around, turn the volume down (so that passing customers or managers cannot hear), and then stand there with his ear pressed against the speaker in order to hear what "they" are talking about. Sometimes, they stand there for several minutes, go back to their register to wait on a customer, and then return to the scanner for another few minutes. Hilarious!!

Try it, and let me know how it works at your neighborhood Wally World.

Sometime during March I made a research trip to Olcott, NY where
I could park and actually see the Toronto skyline. I went there to
verify new Canadian frequencies and recheck some old ones.

At that time, I heard Scarborough using all of the above
frequencies EXCEPT 857.0375 and 857.2875. All traffic was car-to-car
and phone patch. Dispatching and fireground ops were still on the VHF
channels. Have they abandoned 154 MHz now?

I think you will find a better results in your search if
you tell everyone what area you live in. or what area your
looking for. how about something like.....

Looking for WEB PAGE for TORONTO?

and just in case you are I have one at the URL below.
Good luck.

Hello.

I have a PRO-51 Handheld Scanner for sale. It is a brand new unit in the box.
Here are the specs/information on it:

- 200 channels
- 800 Mhz
- "Band-Search" for VHF-air, Marine, Fire, and Weather
- HyperScan with 50 channels/sec or 100 channels/sec
- Priority Mode
- Lockout Channels
- Backlight
- Keypad lock button
- Memory Backup
- Earphone jack, external power jack, charging jack, and BNC antenna jack.
- Rubber ducky antenna included.
- Takes 4 AA batteries.
- Can run off AC current or DC with appropriate adapters.
- Covers the following:

29-54, 108-174, 406-512, 806-823.9375, 851-868.9375, 896.1125-956 Mhz..

From the catalog: 6 1/6" tall, 2 7/16" wide, 1 11/16" thick

Retails for $319, I will take any REASONABLE offer.
At this time, I don't have a receipt, but that could change (I have to search
for it, which is why I'm selling on the 'Net..)

Terms: You pay shipping and/or COD charges, depending upon the offer.
I would be willing to open up the scanner before shipping to make sure
it's fully functional.

Please leave email with offers/information.
Thanks!

>
> Tia
>
> Nick
> WB4SQI

Not sure what the difference between the 2515 and the 2500.... I noticed
that it covers 5 to 1500... Mine (AOR 2500 will go from 1 to 1500??) has
something like 78 banks... with 32 ch. per bank...
the last 20 banks 63-78 are the search banks... That is where you program
a upper and lower in each bank so that you have several search banks av
available.....Or something like that...
As for MODS, don't know of any... I have been talking to Tom from AOR and
there is not much of anything you can do with this scanner..
I forget his E-mail but will try to locate it for you...

The only thing I have done to mine is add a SCA decoder to mine...

Looking for info on this scanner....

what I am looking for is
1) I need the pin 9 location TA7787AF (I think that is what it is..will hafta open the scanner and look again...)
2) There is a set of command in the back of the manual for telling the scanner what to do via the seriel port.

And of coure any mods that might be available...

Now, I talked to Tom at Ace Comms. and he said he didn't know of any so there might not be any... but, of course I gotta ask..hehehe..

Also, is there a way to clean up the BFO (switch or such) so that when you try to listen to SSB voice it kinda sounds normal?

A lot of people on welfare today have a 'mental block' when it comes to working, but as long
as we keep giving them what they want, they just keep taking it. Seems the same is holding true for good ol' amateur radio. Doesn't really matter though, since all I have to do these days is shout 'hearing problem' and I get a code free...what?...Advanced or Extra? Why work?

By the way, I wonder if that guy ever sold his gear...

With this kind of logic, I'm surprised that hand-cranking a model-T is not
a requirement for getting a drivers license!

Morse code is a fine sideline for those who are interested... nothing
more! I would think that knowledge of modern communication theory would
be more relevent (not really... amateur radio is for the most part an
appliance hobby)!

Hi -

I just purchased a "Patrolman" PRO-2026 scanner from Radio Shack in Ottawa, and could use some advice. For examples, what are the best police channels to monitor? My model is older, so when I press the 'police' channels button, I get cell phone conversations. Fun sometimes, but not quite what I am interested in. In particular, I'd like to know the Ottawa Carleton district police frequencies. If anyone can send me some pointers, I'd be mighty appreciative.

Regards, Joe Johnston ---> jjohnston@sonetis.com

Hi -

I'm sorry it you've already seen a version of this post. My server is kind of unpredictable these days. Anyway, I could use some tips on gettin the frequencies for the Ottawa area police. I just bought an older model Realistic Patrolman PRO-2026, which when I press the 'police' bands button, gives me cell phone conversations (fun sometimes, but not what I wanted really). Any tips would be much appreciated.

Where can I purcahse a replacement battery pack to the Bearcat 200?
What is the price? I Would like the COMPLETE pack and not the insert,
but if you know a source for either please respond VIA EMAIL.

Thanks in advance,
dmoore@earthlink.net

No, it's not any good. What kind of mod did you want to do to an $89 scanner?
I tried a Pro60XLT-1 (yes, the one with the 5 linkable search banks) and heard
my local VHF PD all over the VHF band.

1743. Re: Handheld CB radio wanted...

The best handheld will probably be the upcoming Uniden Pro350XLT, pictured in the May CB Magazine. It'll have the 7 NOAA Wx freqs, Scanning and Dual Watch. Plus, Uniden will offer an optional nicad pack.

You could return the US one and buy the UK one, which has full coverage in the 800/900MHz band. Of course, you'll still be stuck with 12.5kHz steps throughout the range.

I just purchased an AR8000 and I am totaly pleased with it . It is
much better than the Trident 2400 I used to have. It will be even
beter when I have the cell blocks removed

Neither of the above is remotely legal. Nor practical. Cellular and cordless phones are both TWO-WAY. Even if you get on the exact frequency you'll just create a bunch of interference. Or you might overpower one party of the conversation and start a two way conversation with the other.

Yeah if you don't mind breaking the law you could get on one of the frequencies and transmit. You could slip in a few words then shut off and listen. At least one of the parties might hear you. The cellular phone, however, would probably react to the interfering signal by changing frequencies, then you wouldn't get to hear anything afterwards.

If you have a cordless phone like mine which can change channels, you might be able to set it on the channel they are on. Trouble is, the phones are designed to ***not*** select channels already in use. Also, if you didn't get as close the the base as the other phone (the one you're trying to listen to) is, they probably won't hear you at all. The base only responds to the strongest signal, and ignores all others.

In three words: don't try this.

In article <4l0chh$c0g@ralph.vnet.net>, kn4aq.gary@mms.net says...

>All airlines prohibit using radio receivers during all parts of the
>flight. That's because the receiver contains a small transmitter --
>called a "local oscillator," that has a very small potential to
>interfere with the navigation equipment in the plane. Of course,
>transmitters (ham radios, cell phones) are also prohibited.

While on a US Air flight to NY from FL a few years ago, I asked
the Captain if (with his permission) I could operate
Amateur packet radio during the flight. He said that would
be fine (except during takeoff/landing or anytime the
seat belt sign was on). I assured him that if he had
any problems whatsoever (even if they were not related to
the radio) that I would shut it down immediately. He
said, "No problem..". I operated 2m packet on 145.01
at about 2 watts with no problems whatsoever. Upon landing,
the Captain stated that he noticed no problems whatsoever.

The use of a cell phone or ham repeater would be pointless
as you would bring up multiple cell sites/repeaters.
Just imagine the cellular roaming charges!

I have operated scanners aboard planes (mostly US Air)
with the flight crew's permission. US Air, if I remember
correctly, permits scanner use with the Capt's permission.
(I think I read it in the seatback guide..)

IIf you don't mind waiting a few more weeks, Lowe Electronics will
shortly be launching a new advanced receiver control software package
which offer amongst its many features, Spectrum Analysis. It will also
be able to control a wide range of short wave receivers and VHF / UHF
scanners.

The package is still under development. Most of the functionality of the
program is there and drivers are currently being updated to include more
receivers / scanners prior to launch.

Expect launch to be around end of June

I hope to be showing a beta version at the Dayton Hamvention on the EDCO
stand.

I purchased a 40 channel (5 watt receive 4 watt send power)
radio shack trc225. It has an external antenna connector (rubber
duckie antenna normal) dc power input besides the internal battery.
I use it in the vehicle with an external
antenna, and the dc power plug (comes with a c lighter adapter).

Seem to work quite well in the vehicle, haven't had a change yet to
really use it with the rubber duckie antenna.

(Radio Shack has them on sale right now for ~$70)

Hello,
I'm new (very new) to the scanning hobby. where is the best place in Dallas area to buy a new or used
scanner? What would be a good scanner to start with? It would be nice to eventually connect to one of my
computers and let it work away during the day (but..I don't want to buy a AOR AR-8000, AOR 3000A,etc...to
expensive for me just starting out) I have been to many scanning homepages as well as commercial pages. I
would like to connect an Optoelectronics CUB and computer in the near future... but, it seems that only the
new, high dollar units will work with these extras...
Please HHHHHHHEELLPP!!!! :-)
Thank you....

I would like to echo Brian's comments. The Arkansas State Police, the agency I work for, went to 800 MHz about 4 years ago. There were several reasons for the move to this band. Mainly the technology advances over the years left our old "low-band" 44.00 MHz system woefully lacking. Our system has it's minor problems, but it is head and shoulders above what we had to work with before. I recall not being able to contact headquarters on low band during a rainstorm, or having to find a hill to call in. There are very few places in my "run" that I can't contact headquarters. Our Department was unable to obtain the necessary frequencies on VHF High Band or the UHF band to build the type system we required. Therefore, we went to 800 MHz. I can't speak for everyone, but some 800 MHz systems, including ours, work well.

Forget "why?", and try to imagine how fast the pages would fly past
on the screen!
Pager companies don't send each page out individually; they send them
in a data burst. Anywhere from one to over a hundred pages at a time
go out in each burst. A poor pager would have a fit trying to display
all of them!

Don't do it! The direct RF from your cellular phone will damage the front-end circuits of your scanner. Also, your scanner will absorb the RF current from the cellular phone, rather than it getting out to the antenna.

They do make devices that allow you to share your car radio's antenna with a scanner. It's not the best solution, but it works. Or look into one of the cellular look'a'like antennas for your scanner.

Well, an Advisor can hold I think 4 CAP codes, so you can get pages for four other pagers, but I think that's it. Check out Grove's web page, they have a cable and software for logging alphapages to a PC with a scanner. After seeing a friend do this, I found there is such a high volume (at least in the Los Angeles area) that it gets boring rather quickly. And it would definately swamp the memory on your pager inside of 5 minutes.

>from practically all of HF.

Funny, I have heard the argument time and time again that people don't have the time to devote to learning the code. "They" say that anyone can mimic a machine and transcribe sound into written characters. Now you come along and say that people who have taken the time to master the code are elitist (a cut above?)

Interesting.

+: What ever happend to good old SIMPLEX.
+
+Beats me. Maybe no one is there, because they spend all their time
+bitching about others not using simplex, instead of doing so themselves.
+
+: No need to flame the shit out of me.....I just stating my oppinion!
+
+The repeaters are only a tiny portion of Amateur Radio.
+
+Want a challenge? Try working 5BWAS CW on a homebuilt one tube transmitter
+and two tube regenerative receiver. For more of a challenge, use only
+dipole antennas.

Or for a real challenge use a couple of tin
cans and NO string!

I fail to see the point behind assertions that Amateur
radio lacks challenge due to arguments such as you
posted. Is new technology such that it can't be used
because it's too easy? How about establishing a packet
net with reconstituting partitioned networks? Or what
a couple guys I know did, and that's getting the
most distance out of their HTs by using their bicycles
as a groundplane?

I'm just bitter I guess. A couple of years ago when I
finally took a half-hearted stab at a no-code tech
license I passed the novice part of the exam, but failed
the tech part due in part to the fact that I could not
correctly name the US gov't agency that regulates exposure
to microwaves! Stupid me! I shouldn't have spent all
that time studying bandwidth allocations or electronics
theory ;-).

Well, I'm jumping into the middle of this thread, because it's
crossposted to sci.electronics.design; I'm not a ham and don't read
rec.radio.*.

The main reason I'm not a ham is that I never got around to learning
the CODE... And actually I think that it's probably for the best; I'd
view an amateur license as a way to hang some interesting new hardware
on my PC and maybe use the local phone patch. If I were a ham and
guys like that started hanging around I'd feel like my stock was
diluted.

Yeah, code is pretty much obsolete today -- what with satellite links,
spread spectrum, etc. you can punch through anything. Even if I were
stranded on a desert island and had to build a sparkgap transmitter
powered by metal strips shoved into citrus fruit I could attract all
the attention I needed by sending any regular pattern. But the code
requirement is a good filter: There are too many "instant gratifi-
cation" types out there and we need to have a few places that still
have standards. (Even though the standards keep _me_ out, I still
support them.)

Please stop posting this to rec.antiques.radio+phono. Our
charter specifically excludes ham radio.

You are a good example of why ham radio is a dying field. You
won't need your frequencies in the future since everyone is dying
off. But die somewhere else since your tedium bores everyone.

I'm not sure which pin you are referring to. I have been able to write simple instructions to communicate via a PC thru the serial port. I could not get the 2500 to reliably connect. It can be done. On the subject of SSB, my set was almost unintelligible on that mode and I tracked it down to lack of smoothing on the plug-in power supply (it was fine on the car battery). I cut the 12 volt wire from the power supply and added a choke/capacitor smoothing circuit. It worked wonders. Be carefull of dropping the supply voltage, even slightly, as my set has trouble reliably PLL locking at 250-350 MHz at less than 13 volts.

Hope this helps

There are links from the Storm Chaser homepage to two frequency lists, and I feel certain you can find what you want there - see:

http://taiga.geog.niu.edu/chaser/chaser.html

It also has quite a few links to a variety of excellent resources and papers and other chaser's pages (like mine...), and is run by Gilbert Sebenste, who's video of one of the IL tornadoes on friday was on TWC lately.

Source record: 235448

Actually, there probably is a way to do this...using what is refered to as a duplexer. Duplexers allow you to hook two radios, or one radio with two transcievers, to one antenna. They allow you to send RF out the antenna and receive at the same time...The one I have handles 150 watts out and splits 140Mhz and 440 Mhz.

The problem will be finding a duplexer that works in high 800 to low 900 Mhz. Also, the connectors you will find on commercial duplexers are likely to be
pl-259's and not the connector that cell phones use.

Contact your local ham radio store and see if they have a duplexer that can be used...

>
What frequency is the "Police Band" on that radio? I suspect that you are
hearing cordless phone 46-49 Mhz band. Which was close to some Highway
patrol frqs that are in the low FM band. I never liked radios marked with
buttons that do not reflect actual frequency allotments. For the Ottawa
area the police can be found on:

Ottawa Police ch. 1 142.095 Mhz
" " ch. 2 142.485 Mhz
" " ch. 3 142.725 Mhz
" " ch. 4 142.995 Mhz
" " ch. 5 142.770 Mhz Interservice channel
" " ch. 6 139.680 Mhz Simplex
" " CADRE 142.230 Mhz MDT's datalink

Nepean Police ch. 1 142.335 Mhz Now part of Regional Police
Glouc. Police ch. 1 142.635 Mhz " "

This should get you started, but note when the Regional Police get their
new radio system, expect them to go to 800 Mhz, digital.

It is made by GRE (who also makes the 2036 replacement: the 2042)
GRE does not sell scanners with their own name - although they put their
name on the 800MHz downconverters used for scanners that don't have
800MHz coverage.

For Sale:

Used Uniden Bearcat BC700A Mobile Scanner, excellent condition:

Freq. Coverage:
29-54 MHz
108-174MHz
406-512MHz
806-956MHz

Five preprogrammed service banks (with some prog. channels as well):

Police: 739 channels in ROM, 20 more programmable in RAM
Fire/Emerg: 197 channels in ROM, 10 more programmable in RAM
Air: 1160 channels (freq step search) in ROM
Marine: 90 channels in ROM
Weather: 7 channels in ROM
Private: 20 programmable channels in RAM
(50 channels programmable total)

Modifications:
-Cellular Coverage Restored (See above freq. coverage)

Accessories Included:
-User's Manual
-Mounting Bracket for Mobile Installation
-Original AC adapter for home or "base" use
-Original Antenna
-12V Fused Power Cord for Mobile Installation

Price: $150
(I purchased it new, with celllular blocked, for $189)

>It is made by GRE (who also makes the 2036 replacement: the 2042)..

The Radio Shack PRO-2036 and Uniden/Bearcat BC-890XLT are both
made by Uniden.

From the FAQ "Buying a Used Scanner Radio:"

PRO-2036: Same as Uniden/Bearcat BC890XLT. Tuning knob.
200 channels, global delay. Scans and searches fast.
Count, AUX, and Auto Store features. Accepts optional
CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IFs
-- lots of images and birdies. Prone to severe intermod,
especially when used with an outdoor antenna. See "The
Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass,
in June 1995 Monitoring Times.

1808. Password on AR8000

Newsgroup: rec.radio.scanner
Date: 1996-04-22 00:00:00 UTC
From: slwork@netcom.com
Message-ID: <slworkDq9zMF.JD@netcom.com>
Source record: 235468

The AR8000 has a feature where you can "password protect" half of the memory banks to keep them safe from "preying" eyes. I guess what you are supposed to do is put all the frequencies you shouldn't be listening to in these banks. But the manual also says that if you forget the password, all you need to do is turn hold down the clear key and turn the radio on, then the password will be deleted, but channel memories will be intact. This "hard" reset will destroy other, less essential, data, but not the stored frequencies.

I don't get it. If someone wants to access your "secret" frequencies they just hold down the clear key and turn on the radio. The manual describes it. No one is going to figure out how to access memory, etc. without looking at a manual anyway, right? I fail to see what use this feature has.

WELCOME TO
THE WORLD
OF AR8000
RECEIVER

David Wiza (wiza@3rdplanet.com) wrote:
: I hate seeing people put things up for ridiculous prices. I saw an ad in
: a local computer magazine, some guy was trying to sell stuff like 14.4 modem
: for $100, 4mb RAM for $120 each, 20mb HD for $100. I had to respond. Pissed
: him off BAD. Tough.

: If people set a fair price, no problem. But if someone wants $200 for a
: scanner that retails for $300, but I know Rat Shack has it on sale for $189,
: then I am not going to keep quiet.

I don't get the point. I think $300 would be a bargain for a 2006 in
good condition. $200 would be a steal. It doesn't matter what the radio
originally sold for. The fact is that they don't make them any more,
and this particular model has a desirable feature (i.e. a certain diode)
which current scanners don't have.

Oh brother! Millions huh? All cuz of the Morse code requirement.

Have you gotten any autographs from the little green men running
around in your back yard yet? Just curious.....

It's people like you that will be the demise of amateur radio. Not
the government, not the Morse code requirement...geeez..

C'mon. If you want to talk around the world get into satellite
communications or something. There are a helluva lot more amateur
frequencies above 30 MHz than there are below.

What happened to all this good stuff that was to come out of the No
Code license? Seems like all we got is a bunch of belly-achers who
would rather concentrate their efforts on obtaining something for
nothing rather than putting their efforts into learning about what
they already have. You're giving a bad name to those who do have a
genuine interest in advancing the art of amateur radio and entered the
hobby via the same class of license you have.

You would rather rant and rave about a tiny piece of spectrum while
much of where you already have privileges for is under the gun. Guard
that my friend. If there IS power in numbers THAT is where your
efforts should be.

As far as what people talk about...conversations are as diverse as are
its participants. If you don't like listening to Harry talk about his

gall bladder attack, change the damn frequency. Better yet, use the ON/OFF filter....or....sell your equipment and find another hobby. As long as there are hams there will always be SOME THING to talk about. You might not like the topic...but someone else might be interested...it was to them the topic was being aimed anyway...if you don't like it...mind your own business then.

jim, wk1v

Ahhh....I feel better now...ooh....my aching back....

1818. RE: are there cell mods for PRO-51

The Cellular Security Group does the "Virtual Down Converter" for the
PRO-51, unlocking the blocked-out cellular frequencies. $99.00
508-281-8892
